

COMPUTERWORLD

By Lisa Picarille and Craig Stedman

Calling Microsoft Corp. on the cyberspace carpet, Sun Microsystems, Inc. is about to unveil a slew of hardware, software and consulting services intended to simplify how users deploy Internet and intranet technologies, *Computerworld* has learned.

Tomorrow's announcement is designed to stop customers from hearing the siren song of Microsoft's Windows NT-based net products.

Onward and upward

It also marks a strategic shift for Sun that expands the Mountain View, Calif.-based vendor's focus beyond

Sun spots intranet

Tool rollouts ease deployment, development of applications

its Internet stronghold into the emerging corporate intranet arena.

Intranets are applications that make internal corporate use of the Internet, with Web browsers as the desktop user interface.

According to sources familiar with its plans, Sun's rollout will include Solstice World Wide Web server software, an Internet mail server, tools for developing enterprise-wide

On the way

Java WorkShop 1.1 is due to ship in July. It will support the Macintosh and add a GUI builder, a WYSIWYG HTML editor and a Java-to-C++ gateway.

applications based on Sun's Java programming language and 64-bit versions of the company's Netra Web server hardware.

Sun declined to comment on the announcement. But some users are eager for more details.

Michael Prince, chief information officer at Burlington Coat Factory, Inc. in Burlington, N.J., said Sun needs to make it easier to develop

applications with Java and manage Internet/intranet applications.

"We use Sun products for our intranet, but we've had to integrate a lot of things on our own," Prince said. "In some cases, Sun has complete offerings, but it hasn't been packaged in a way that makes it easy."

"Java development will be easier to deal with when the tools are better," said Walter Herrick, a systems administrator at the University of California at Berkeley's Space Science Laboratory.

Some industry watchers said Sun needs to make a loud and clear state-

Airline turbocharges schedule efficiency

By Thomas Hoffman

The best on-time performance. The fewest customer complaints. The lowest number of lost bags.

Southwest Airlines Co. has snared the U.S. Department of Transportation's coveted "Triple Crown" of airline service awards for an unprecedented four consecutive years (see chart, page 137).

To keep a firm grasp on its No. 1

ranking, the Dallas-based airline recently automated a gaggle of flight scheduling processes under an information systems project expected to deliver up to 20-to-1 productivity gains.

And in keeping with its discount image, Southwest has so far spent a mere \$300,000 since February 1995 to develop its new systems. That's more than cost-effective when com-

IBM ghosts haunt CEO

By Craig Stedman and Michael Goldberg

Lou Gerstner may have brought IBM back from the brink, but the company is still paying for past mistakes and playing catch-up in the race for technological leadership.

In the three years since he became chairman, Louis V. Gerstner has changed IBM drastically, and mostly for the better, according to interviews last week with two dozen users and analysts, and an exclusive *Computerworld* survey of 100 information systems executives at IBM shops.

But in areas such as client/server software, PCs, networking and mainframe storage, IBM is still struggling to make up for the time it frittered away before Gerstner arrived in Armonk, N.Y.

IBM, page 14

Lou Gerstner says the Internet will bring the market back to IBM because of the need for large servers. Do you agree?

IS YOUR BACKUP TOUGH ENOUGH FOR THE JOB?

Is your critical data guarded by a puny backup solution that doesn't scale up? Backup Express™, new from Syncsort, is fast and powerful, designed specifically for today's distributed networks, where the data grows every day. Backup Express™ backs up and restores gigabytes of data fast—whether on UNIX, NetWare, or Windows NT. If you want a backup strong enough to keep your network data secure and bring it back fast, call us.

Meet Romeo and Juliet

Researchers at Stanford University have developed a pair of mobile robots that can wash windows, pick books off shelves and dust furniture — relatively delicate tasks by robot standards. Romeo and Juliet can cooperate on tasks that can't be done alone, such as moving large objects. The robots were created by Stanford roboticist Oussama Khatib and his students.

Their work is part of a National Science Foundation program aimed at designing brawny robot assistants for moving bulky objects under human supervision.

**Go out for a SPIN**

In community meeting rooms across the country, small groups of software professionals gather after hours to discuss ways to improve their craft. The regional groups are Software Process Improvement Networks, or SPINs. Topics include programming tools and metrics, software quality and testing. Some of the urban SPINs include the following:

- Pittsburgh: Contact Dawnna Baird at dbaird@sei.cmu.edu. (She's an excellent contact regarding the SPIN movement.)
- Boston: Contact Donna Johnson at johnson@tiac.net.
- Chicago: Contact Kenneth Goncharoff at gonch@tellabs.com.
- Los Angeles: Contact Thomas Kudlick at kudlick@cp10.es.xerox.com.

But this is just a sample. There are many other regional SPINs, and new ones are being formed all the time in cities from Fairbanks, Alaska, to Birmingham, Ala. A complete list is available at the Software Engineering Institute's Web site, <http://www.sei.cmu.edu/participation/spins.html>.

Patent watch

Recently issued U.S. patents were gleaned from MicroPatent's Patent Server at <http://www.micropat.com>. (Number, inventor/assignee, date issued)

A compact keyboard for handheld computers that allows for one-handed touch-typing. The keys are operable by the left hand alternate with the keys operable by the right hand. (5,497,151, IBM, March 5)

A computer time-clock system that alerts supervisors when an employee has worked beyond a certain time limit; can be used to prevent labor law violations. (5,497,141, Timecorp Systems, March 5)

An automated supermarket checkout counter that weighs and scans a product and compares it with a database of product characteristics. (5,497,314, Jeffrey M. Novak, March 5)

A system to monitor vehicle driver performance. An onboard computer collects performance data from several sensors to identify reckless driving habits. (5,499,182, Jeffrey Ousborne, March 12)

A turn-by-turn navigational system from Siemens Automotive will be installed in some luxury rental cars this summer. TetraStar (pictured) uses global positioning satellites, a gyroscope and an onboard database of roads to give drivers directions to their destinations.

Digital Frontiers

All St. Barnabas Hospital wanted to do was run a network from its data center to two buildings 300 feet across the street.

But the Bronx, N.Y., hospital couldn't dig up the street to lay cable, and it couldn't run aerial cables among the buildings, says Mark Smith, communications manager at St. Barnabas. So the hospital installed a laser-beam LAN. The wireless LAN from Laser Communications in Lancaster, Pa., uses infrared beams for line-of-sight data transmissions among the three buildings.

Smith says the laser LAN was cheaper than microwave technology and didn't require regulatory licensing to be installed. Better yet, it operated without interruptions during this winter's snowstorms, torrential rains and high winds, Smith reports.

News shorts**Spyglass to stir browser war**

Fighting an image as an Internet also-ran behind Netscape Communications Corp. and others, Spyglass, Inc., plans to spice up its Web browser next month. The Naperville, Ill., vendor will unlock pieces of its Spyglass Mosaic browser so users can snap in other vendors' components for reading newsgroups, sending electronic mail and other Internet tasks.

Netscape's Navigator allows outside pieces to be used, but the browser works best with Netscape's own pieces. Spyglass plans to announce on April 15 a set of application programming interfaces for building add-on modules for its browsers.

Microsoft Corp.'s Internet Explorer browser is based on Spyglass Mosaic, but that agreement will end with Version 3.0 of Explorer, which is due by midyear. In the meantime, "we want to distance ourselves from Microsoft and Netscape," a Spyglass source said.

PacBell tries networks

Pacific Bell this week will kick off a service to help customers plan, install and manage complex multivendor networks.

What sets Pacific Bell Network Integration (PBN) apart from similar ventures by regional carriers is its customized support packages. The first helps users link remote LANs to home base. The second helps users connect to the Internet or build intranet services.

"Targeting these needed packages toward particular customers makes them unique," said Traci Bair, manager of the network support and integration services program at International Data Corp. in Framingham, Mass.

"We wanted a single point of contact so when a problem hits our network linking 22 hospitals, we don't have to call five different carriers," said Fred Hassard, network communications manager at Adventist Health in Roseville, Calif.

MCI, Netcom match pricing

The Internet is starting to look like a cheap diner, where the motto is "all you can eat for 20 bucks."

Last week, **MCI Communications Corp.** and **Netcom On-Line Communications Services, Inc.** each announced dial-up Internet access charges of \$19.95 per month for unlimited usage.

In recent weeks, **AT&T Corp.** and **CompuServe, Inc.** have also priced their Internet offerings at \$19.95 per month for unlimited usage. "This provides more people with immediate access and means to get on the Internet," said Gary Nielsen, manager of marketing programs and special events at Ford Motor Co. in Detroit.

For more News shorts, see page 8

To Do Business On The Internet, Just Add This.

It's that simple. Thanks to a new product from Computer Associates called CA-OpenIngres/ICE™, now anyone can have access to a robust, reliable and manageable Internet infrastructure. In one quick step, your company can become a globally connected enterprise. ICE stands for "Internet Commerce Enabled."™ That's a fancy way of saying, this software is designed specifically to handle the unique requirements and challenges of the Internet.

CA-OpenIngres/ICE is an HTML-enabled relational database that's been optimized for Internet use. So now, corporate Web applications can be created automatically with embedded HTML access to both server and host-based data sources. And CA-OpenIngres/ICE's adaptive query management delivers maximum performance, an important capability given the dynamic nature of the Internet. There's

also an industry-leading replication facility that provides consolidation and dissemination of corporate data through the Net and fault tolerance for your Web servers. In addition, the integration with CA-Unicenter/ICE™ offers intelligent agents and graphical administration facilities that make CA-OpenIngres/ICE self-manageable. It's the database engine that finally lets the Net get down to business.

**Call 1-800-225-5224
for more information.**

Visit us at <http://www.cai.com> or call right now and find out just how simple it is to do business on the Net – all you need is a little ICE.

Laptop prices slip, slide

Compaq jumps on bandwagon; users wait for pressing need

By Mindy Blodgett

This is shaping up to be a great year to buy notebook computers. Compaq Computer Corp. last week joined the growing list of vendors that are cutting notebook prices when it slashed the price of its midrange offerings by 28%.

Pundits stopped short of calling it a price war, but it certainly looks like a buyer's market as prices could drop even lower. However, users shrugged off the news, saying their purchases will be based more on internal business needs than plummeting prices — much the same view they took on desktop price cuts [CW, March 11].

In the past two months, IBM PC Co., Digital Equipment Corp., Texas Instruments, Inc., Toshiba America Information Systems, Inc., NEC Technologies, Inc. and Hewlett-Packard Co. have announced price cuts — in all pricing levels and product lines —

ranging from 5% to 20%.

Analysts and vendors said many notebook makers are clearing out inventory, ramping up new lines — including new ultra-portables — and migrating to faster chips.

Vendors are also grabbing for market share in an increasingly competitive market, analysts said. Notebook makers last year faced a softer market than expected and a difficult transition to Intel Corp.'s Pentium microprocessors. Sales growth for notebooks was a relatively sluggish 15% last year.

In contrast, analysts from Dataquest, Inc. in San Jose, Calif., last week predicted the notebook market will post a healthy 30% gain this year. As new players such as Hitachi PC Corp., Fujitsu Ltd. and Sony Corp. enter the fray, the battles will grow even more fierce, analysts said.

"We haven't seen anything yet" in pricing, said Bruce Stephen, an

analyst at International Data Corp. in Framingham, Mass. "It's going to get a lot messier. There will be more of this price compression as everybody jockeys for position."

Users said the price cuts are welcome, but they said they will buy notebooks only when there is a pressing need.

"I've been monitoring the prices," said George Staton, assistant vice president of Commerce Bank in Cherry Hill, N.J. "Certainly you'd like to get the most for your money. But the business units drive this buying now, not the information systems department. So when they want notebooks, we buy."

Kevin Danahy, manager of workgroup application development at Millipore Corp. in Bedford, Mass., agreed. Nevertheless, he said, it's nice to be in the driver's seat when it comes to pricing.

Going mobile				
The Top 5 mobile computer vendors by worldwide shipments				
	SHIPMENTS	MARKET SHARE	SHIPMENTS	MARKET SHARE
TOSHIBA	1.2M	14%	1.5M	15%
COMPAQ	1.06M	12%	1.04M	11%
NEC	729,000	8.4%	994,000	10%
IBM	851,000	9.8%	983,000	9.9%
APPLE	644,000	7%	661,000	6.7%
TOTAL UNITS SHIPPED		8.6M		9.9M
		1994		1995

Source: Dataquest, Inc., San Jose, Calif.

"We're certainly getting better notebooks for our money," Danahy said. "And we've learned our lesson here. Notebooks now depreciate after about two years, so we turn them over a lot."

Compaq's price cuts are part of a corporate strategy to halt a sales slowdown across its product lines. Much of Compaq's troubles came from depressed portable sales, which account for less than 17% of corporate revenue. That is down from 35% in the early 1990s.

Compaq had a commanding

lead in the notebook market but was overtaken by Toshiba.

"It's fair to say we have taken our eyes off portables a little bit," said Eric Shuster, portable product marketing manager at Compaq. He said the company had focused on its server and desktop lines but is bearing down again on its once-vaunted portable lines.

& Upcoming Pentium servers are aggressively priced. See page 45.

Users warned: Intranet suites run the gamut

By Kim S. Nash

The notion of an intranet suite — a software and/or hardware bundle intended to give information systems departments an instant intranet — is all the rage among vendors lately. But an intranet-in-a-box is a little like a jack-in-the-box: You don't know what's going to pop out when it opens.

Silicon Graphics, Inc. (SGI) introduced a suite last week. World

Wide Web server maker Process Software Corp. is expected to announce one next month. Smaller vendors, such as NetManage, Inc. and FTP Software, Inc., also offer such sets. Since no two are alike, users need to be on their toes.

"There's a real difference in terms here that can be confusing if you don't watch out," said Cecil Murray, an independent contractor helping to build several intranet applications at Georgia-Pacific

Corp. in Atlanta.

For example, SGI's WebForce Intranet includes the company's Unix machine and a Netscape Communications Corp. Web server. But the suite has no firewall, an essential security prerequisite for internal corporate use of the public Internet.

Different approach

NetManage in Cupertino, Calif., meanwhile, takes a different, more desktop-oriented tack. Its Chameleon suite includes electronic mail, a Web browser and a handful of other utilities — but no Web server.

But before users even start to compare the suites, they need to decide whether a suite, vs. a best-of-breed strategy, is the best approach to building their intranet.

Vendor-configured suites by definition rarely combine the best products in each category, said Gordon Bennett, a lead consultant at Web consulting firm Techne Group in Waltham, Mass.

An intranet suite is "OK, as long as your company is not locked into a single group [of products] that cannot be changed later," said a Web coordinator at an Indianapolis firm that is building several intranets for the U.S. Army and the Department of Defense.

Murray agreed: "I don't want to

be wired into one vendor's view of what an intranet is."

But for some users, intranet suites are just plain easy. "You deal with one vendor, one support center and one price," said Matthew Cutler, founder of the Webmasters Guild, a Cambridge, Mass.-based professional group for Web workers.

Those users who opt instead for a suite should look for the following features, analysts said:

- **Integration.** The operating system, Web server and administration utilities should be aware of one another so they can be monitored and managed as a unit.
- **Simple support.** If a vendor sells another vendor's product, make sure you know who is accountable when trouble starts.

The number of intranets outpaces the number of external Web sites, says a survey from O'Reilly & Associates. A poll of 1,000 companies showed that 37% of large, and 23% of midsize, firms run at least one intranet. Large companies are those with 1,000 or more employees; midsize companies have 101 to 999 workers. More details can be found at <http://www.ora.com/survey>.

- **An escape hatch.** Sets that let users snap in different databases, messaging systems, workflow packages and even Web browsers and servers are the most flexible.

& A Web database server bows. See page 73.

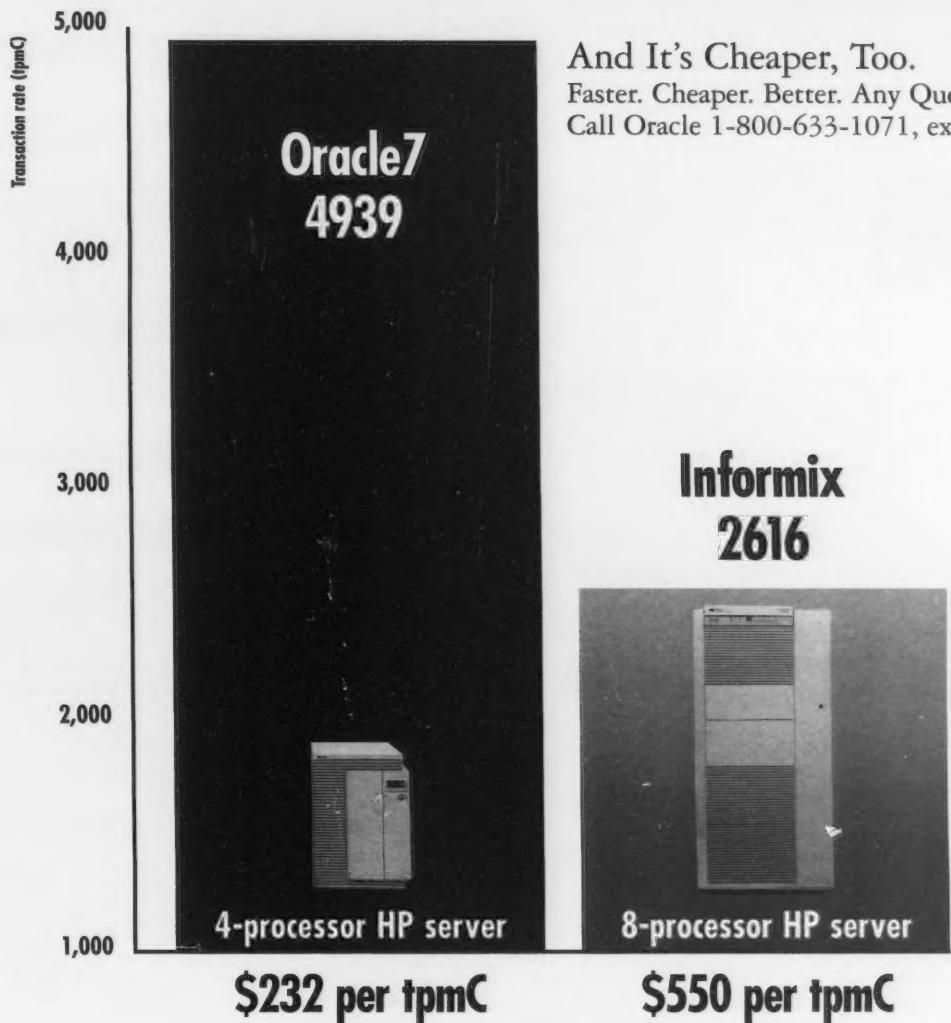

Clarification

Novell, Inc., which didn't comment at press time on an Inside Lines item two weeks ago regarding the number of attendees Microsoft Corp. was allowed to send to the Brainshare conference, has issued the following clarification: "Microsoft was not limited to 10 attendees — they were allowed

to send 25 registered attendees to Brainshare. This is the maximum number we allot to all companies."

The Novell spokesman said this was a departure from Novell's previous policy, which limited other vendors to sending only 10 people to Brainshare.

Oracle7 on a little HP server is faster than Informix on a big HP server.

The TPC-C® is the industry standard test for measuring database On-Line Transaction Processing (OLTP) performance and price/performance. Benchmarks published by Hewlett-Packard show that Oracle7 on a small 4-processor HP server runs faster than Informix on a larger 8-processor HP server. Amazing. And because Oracle runs so fast on a small computer, you have an opportunity to save a lot of money as well as a lot of time.

ORACLE®

Enabling the Information Age™

\$ Cheaper \$

Expo touts tools to build next-generation networks

By Bob Wallace

The noise from the show floor at Network/Interop '96 next week in Las Vegas may drown out the din from the casinos, as vendors unveil wares that let users build next-generation networks.

These products will be cheaper, faster, more powerful and more flexible than today's network building blocks.

Cabletron Systems, Inc., IBM, Novell, Inc., Optical Data Systems, Inc. (ODS) and Bay Networks, Inc. will lead the charge with a broad array of offerings, some of which will be available in two months.

• **Cabletron** in Rochester, N.H., will outline its plan for SecureFast Virtual Networking, which will let users build virtual networks.

With virtual networks, routing intelligence is built in to the switch, which obviates the need for routers. This can cut costs and simplify network administration.

The software/hardware upgrade will enable Cabletron's existing switching hubs and stand-

alone LAN switches to support SecureFast Virtual Networking.

Cabletron will also push Version 4.0 of its distributed Spectrum platform. Spectrum users will get an enterprise-wide view of the network for key management applications, an NT-based server option and reports accessible via the Web.

• **IBM** in Armonk, N.Y., and **Novell** in Orem, Utah, will jointly announce NetWare for SAA for IBM's AS/400 minicomputers, which essentially is an improved version of Novell's LAN-to-minicomputer software package.

IBM sources said the package will be easier to use and configure and will cost less than half as much as its predecessor. The firms are moving to a per-user, instead of a per-session, pricing structure but didn't offer details.

"With the old pricing structure, [the package] cost roughly four times more than Microsoft's SNA Server package," a Novell source acknowledged.

The software, designed for

lower-end AS/400 users, will ship in two months.

• **Hewlett-Packard Co.** will unveil the long-awaited distributed architecture for its OpenView platform. This version will scale to cover very large networks. HP hopes to ship it by June.

• **ODS** in Richardson, Texas, is preparing the Massively Parallel ATM Matrix Backplane, a 41G bit/sec. switching fabric designed to eliminate network bottlenecks that some users have encountered when using ODS' Infinity switch for LAN switching.

Users can upgrade their Infinity switches in the field for \$3,300, according to ODS. The vendor will announce a variety of LAN switching modules that will give users high-end switching at low-end pricing (see chart).

For example, a new Infinity module slashes the price of the vendor's Ethernet switching from more than \$700 per port to about \$300 per port.

The switching hub vendor also will lay out its multifaceted virtual networking blueprint, which analysts say will position ODS well against Cabletron, Cisco Systems,

Inc. and others.

• **Bay Networks** in Billerica, Mass., is expected to burst onto the scene with a line of Internet-related products designed primarily for large corporate users and the swelling ranks of Internet service providers.

Sources said Bay also will announce a huge deal to provide its

high-end Backbone Concentrator Node routers to Advanced Network & Services, Inc. (ANS) in Elmsford, N.Y., which is owned by America Online, Inc.

ANS runs a national 45M bit/sec. fiber network that makes up part of the Internet. The Bay routers may allow ANS to provide cheaper Internet access services.

Flip the switch

Optical Data Systems' ambitious LAN switching plan

News Shorts

Judge confirms CA's RICO violation

A New York State Supreme Court judge last week upheld a ruling that **Computer Associates International, Inc.** must pay a \$12 million arbitration award to four software developers. Last September, an arbitration panel found that CA had violated the Federal Racketeer Influenced and Corrupt Organizations (RICO) Act and had fraudulently concealed transactions related to the DataVantage application tool to avoid making royalty payments to the developers. CA said it plans to appeal the decision.

IBM to rescue AT&T workers

IBM has agreed to pick up 3,000 AT&T Corp. workers who were to be laid off as a result of AT&T's split into three companies. IBM made the offer as part of a 10-year, multibillion-dollar contract for its Integrated Systems Solutions Corp. to manage AT&T spin-off Lucent Technologies' in-house computer system.

Cisco adds ATM features

Cisco Systems, Inc. last week moved much closer to bringing Asynchronous Transfer Mode (ATM) to the masses by announcing an ATM interface for its mid-range 4500 and 4700 routers. With the in-

terface, users with Ethernet and Token Ring LANs will have access to ATM networks. Until now, ATM interfaces have been available only on high-end Cisco routers. The interfaces cost \$12,500 and are shipping.

Compaq to integrate DMI

Compaq said it would integrate Desktop Management Interface (DMI) 2.0 into its desktop and server management utilities, eventually replacing its own specification.

Compaq cuts server prices

Continuing its drive to maintain market share, Compaq Computer Corp. last week reduced prices on its low-end server line by as much as 10%. Compaq cut the price of an entry-level ProSignia 500 server from \$4,439 to \$3,999. Compaq, in

Houston, also announced several Pentium Pro upgrade offers as an investment protection for current purchasers of its high-end ProLiant 4500 server line.

Microsoft to ship Exchange

Microsoft Corp. will start shipping its Exchange Server before the end of the first quarter, as promised. Microsoft will ship pieces of the messaging and groupware package this week, although Exchange won't be announced officially until next week's Network/Interop '96 conference.

IBM cuts wireless deals

IBM reached agreements with several mobile service providers to offer one-stop wireless shopping to users. Agreements with companies such as **AT&T Wireless** and **Ericsson Corp.** mean that IBM can offer end-to-end programs for wireless communications implementations, including planning, design and management.

AT&T plans Internet Notes

AT&T confirmed last week that it will support Lotus' Notes as part of its WorldNet Internet offerings this year. AT&T dumped its proprietary Network Notes service last month but said it would still work with Lotus on development issues and look to include Notes services as part of AT&T's Internet services.

Cabletron joins \$1B club

Revenue at **Cabletron Systems, Inc.** reached \$1.069 billion in fiscal 1995, a 32% jump from fiscal 1994 for the Rochester, N.H., switching hub maker. Net income was \$216.7 million, up from \$162 million in fiscal 1994.

IBM's rolls out OS/2 browser

IBM unveiled an OS/2 World Wide Web browser that supports Java, the Internet development language from **Sun Microsystems, Inc.** The browser, dubbed WebExplorer with Java, lets users download and run the same Java applets that run on Sun's HotJava browser and Netscape Navigator 2.0 from Netscape Communications Corp. in Mountain View, Calif. The Java-enabled WebExplorer requires the OS/2 beta version of Java.

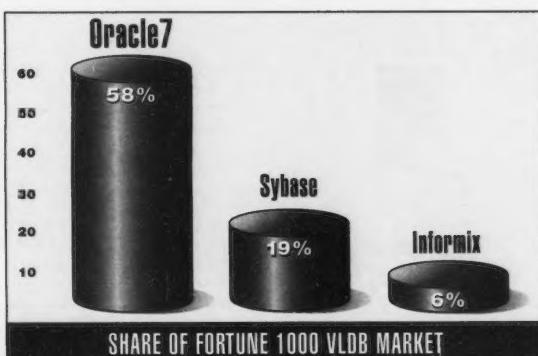

SHORT TAKES

Microsoft gave Internet capabilities to its Access database. ... **Mergent International, Inc.** in Rocky Hill, Conn., and **Utimaco Safeware Group** in Oberursel, Germany, today will announce their merger.... **Digital Equipment Corp.** this week will introduce ClearVLAN, the first products to manage its enterprise virtual intelligent switched network architecture.

Data Warehouse Comparison

Data warehouses are central information repositories for storing and analyzing vast amounts of historical and reference data from a number of different sources. Oracle7 has many more features for data warehousing than any other DBMS.

Features	ORACLE7	Sybase System11	Informix 7.2
Production Petabyte Databases Supported	Lots	Zero	None
Scalable SMP Support	Yes	Not Quite	Yes
Scalable MPP Support	Yes	No Way	No
Parallel Query	Yes	Nope	Yes
Parallel Load	Yes	Yes	Yes
Parallel Index	Yes	No	Yes
Fault-Tolerant Parallel Server	Yes	Never	No
Parallel User-Defined Functions	Yes	Nope	No
Bit-Map Indexes	Yes	Yes	No
Star Query Optimization	Yes	No Way	No
Integrated Replication	Yes	No	No
OLAP/Multidimensional Support	Yes	Sorry	No
Video Storage & Playback	Yes	Nyet	No
Text Storage & Search	Yes	Not	Yes
Spatial Data	Yes	Never	No

Study fielded 6/26-9/1/95. Based on a census of the F1000 who are running UNIX and have a single DB \geq 50GB. Source: IDC.

The Oracle data warehouse provides fast query access to all your data: relational, spatial, text, images, audio, video and instant multidimensional drill-down analysis. So, if fast, accurate decisions are important to your company's performance, call Oracle at 1-800-633-1071, ext. 8197. Or download videos explaining the Oracle Warehouse at <http://www.oracle.com/info/dw/video.html>.

ORACLE®
Enabling the Information Age™

'net to dominate client/server conference

Products, strategies will be on view in Boston

By Julia King

Forget databases and traditional client/server applications.

The Internet and the World Wide Web

will take center stage at this week's Database and Client/Server World conference in Boston.

To no one's surprise, almost every exhibitor is either unveiling or demonstrating In-

ternet products.

Additionally, more than a dozen analysts and software executives will speak on Internet topics, such as using the Web as an alternative to groupware and de-

vloping Internet-based commerce applications.

On the applications side, vendors, including Lawson Software in Minneapolis and Software 2000 in Hyannis, Mass., will demonstrate how to access client/server systems via browser-based clients.

On the development side will be products for building Web-based server applications that require no client software.

"This is by far the more interesting aspect of the Internet and applications... [because] it makes applications development and deployment a lot easier and a lot less expensive," said Richard Finkelstein, president of Performance Computing, Inc. in Chicago.

For example, users can deploy server-based applications to multiple desktop devices, such as Windows-based PCs, Macintoshes and Unix machines, without having to write different types of client code.

Server savings

Maintenance costs also decline sharply because system upgrades and changes are made only to a server and not to each individual client machine.

"If there is any problem, it only has to be fixed in one spot. You don't have to renovate thousands of PCs. You also get rid of the problem of upgrading hardware and operating system software every two years," Finkelstein said.

Also at the show, JYACC, Inc. in New York will showcase its Jam/Web development environment. It lets users build and deploy server-based applications that automatically generate Hypertext Markup Language for display on any type of browser software.

What differentiates the Jam/Web development product from other Web application tools is its ability to work with any browser software and database, according to JYACC. Jam/Web is scheduled to ship in April at a price of \$2,400 per developer.

Empress Software, Inc. in Toronto will unwrap Empress DataWeb, a Unix-based set of point-and-click tools for developing Web pages and archiving data on customers and other users who visit a Web site.

The kit consists of the Empress relational database management system, Empress Hypermedia authoring software, SQL Server software and the Apache Hypertext Transfer Protocol server software. The software comes on a single CD-ROM, which costs \$997.

Where the money is

Large companies' client/server budgets will grow 28% this year, according to Sentry Market Research in Westboro, Mass. Overall, client/server spending will make up 50% of all software spending, Sentry says.

BRIXTON
SOLUTIONS

As TCP/IP networking has grown, so have your SNA access problems. More users than ever need access to your mainframe data. And more than ever, you need a central solution that lets you manage all that traffic.

What's the answer? The Brixton SNA Server from CNT Corporation. It runs on a wide range of open platforms, so you can use it anywhere. It gives you and your users one look and feel throughout your enterprise, so it's easy to implement.

Best of all, the Brixton SNA Server's unique distributed architecture provides the robust performance you need in an enterprise server. A fault-tolerant design with load bal-

ancing ensures performance and availability even with thousands of users. It includes SNMP, security, audit trails, charge-back and more. Plus a graphical management interface that makes it easy to add, delete and modify SNA resources.

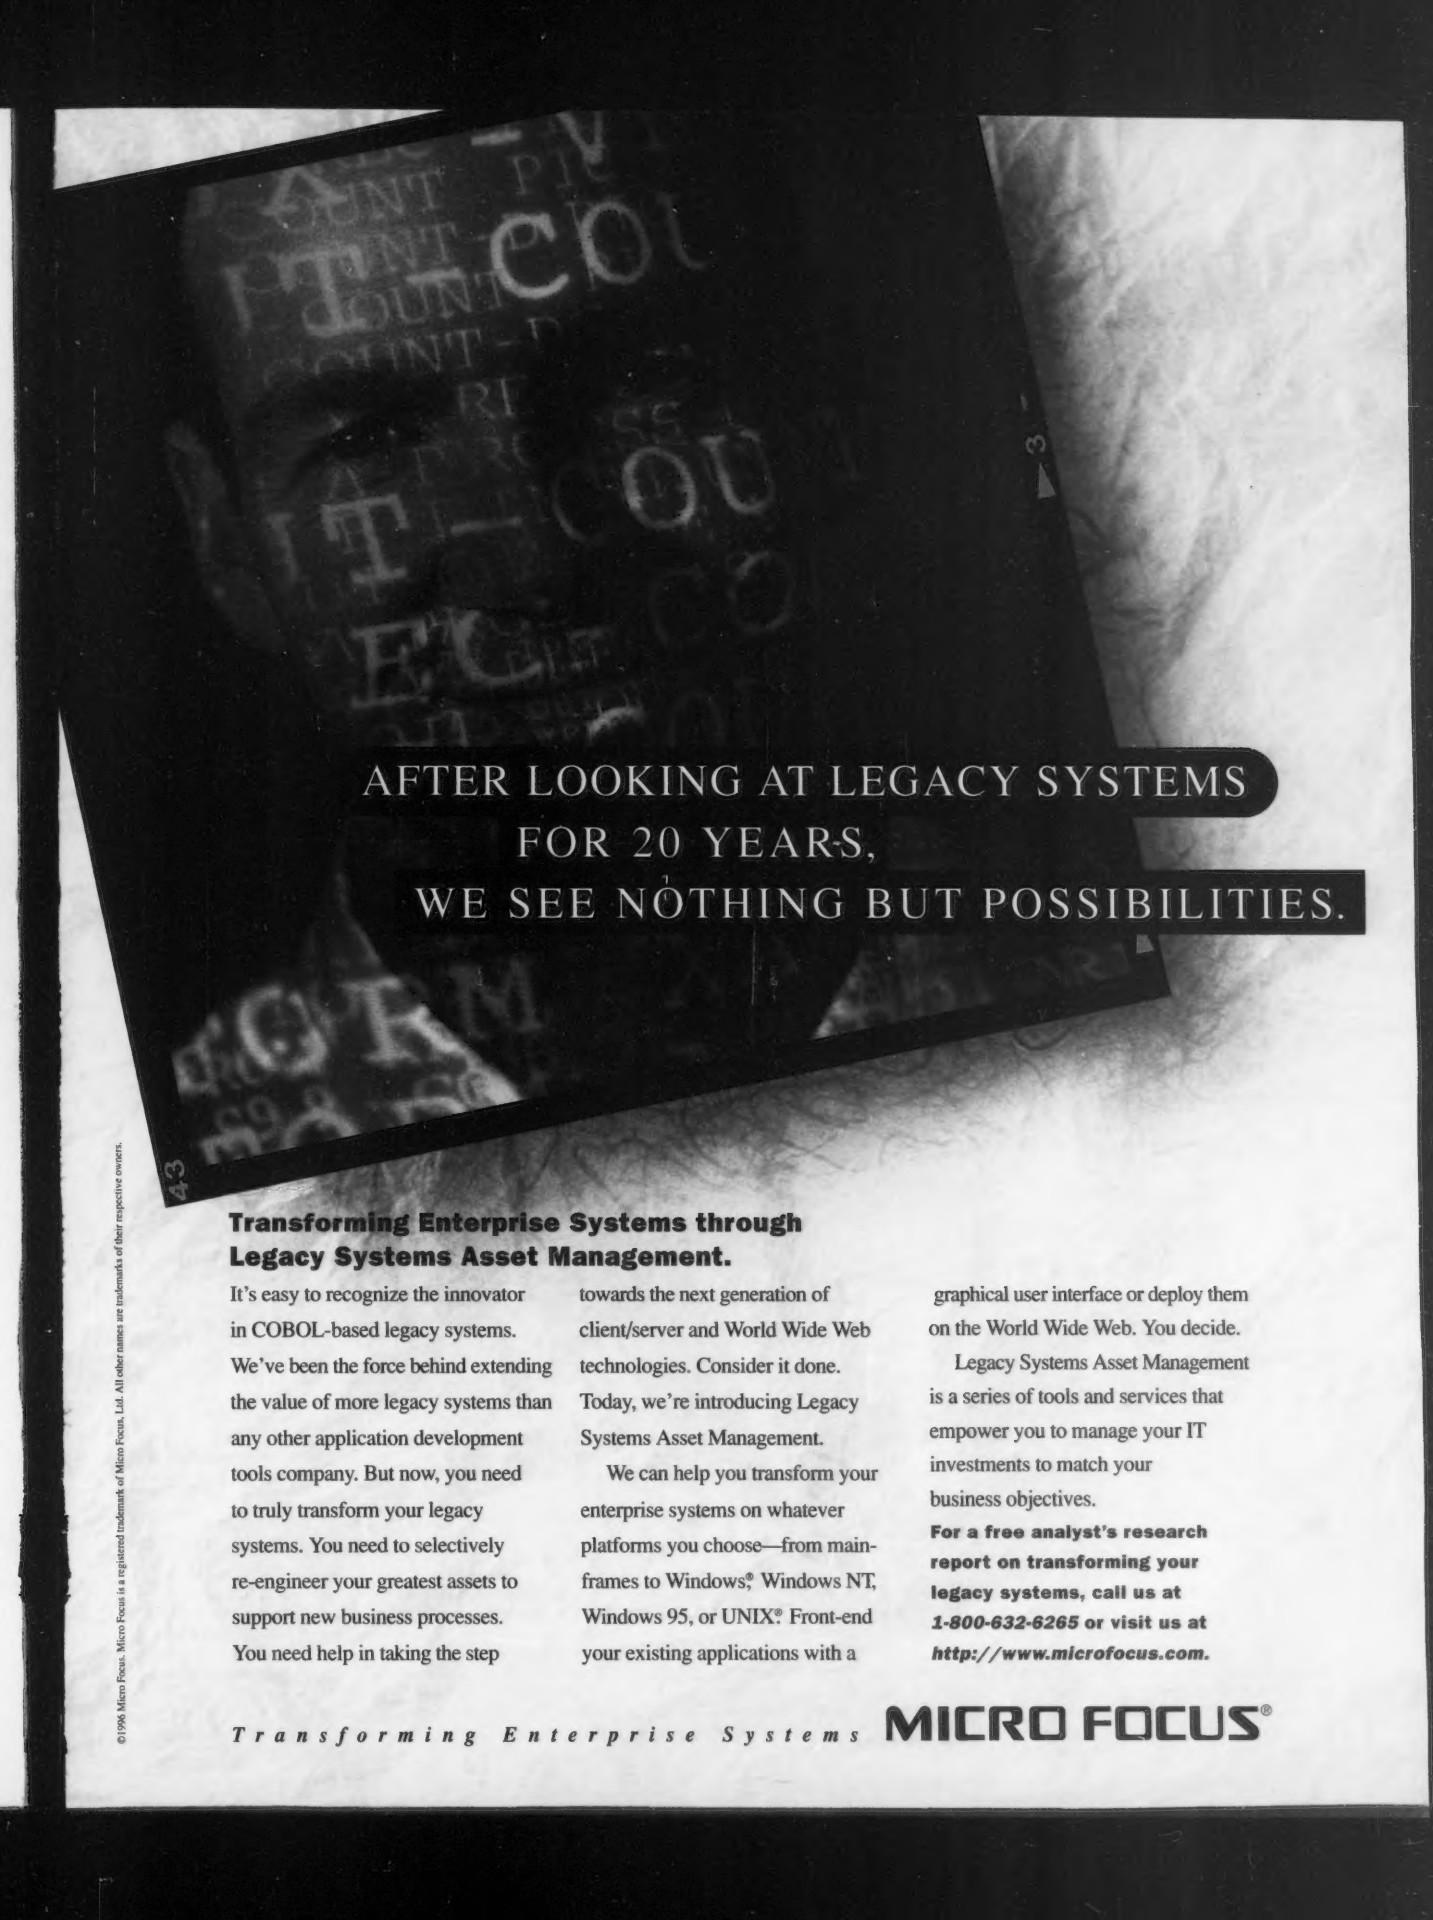

The Brixton SNA Server gives you everything you've been looking for in SNA access. It's already proven in dozens of Fortune 100 companies. Call today for your free "Brixton Solutions Guide." And shift your internet access into high gear.

AFTER LOOKING AT LEGACY SYSTEMS FOR 20 YEARS, WE SEE NOTHING BUT POSSIBILITIES.

Transforming Enterprise Systems through Legacy Systems Asset Management.

It's easy to recognize the innovator in COBOL-based legacy systems. We've been the force behind extending the value of more legacy systems than any other application development tools company. But now, you need to truly transform your legacy systems. You need to selectively re-engineer your greatest assets to support new business processes. You need help in taking the step

towards the next generation of client/server and World Wide Web technologies. Consider it done. Today, we're introducing Legacy Systems Asset Management.

We can help you transform your enterprise systems on whatever platforms you choose—from mainframes to Windows®, Windows NT, Windows 95, or UNIX® Front-end your existing applications with a

graphical user interface or deploy them on the World Wide Web. You decide.

Legacy Systems Asset Management is a series of tools and services that empower you to manage your IT investments to match your business objectives.

For a free analyst's research report on transforming your legacy systems, call us at 1-800-632-6265 or visit us at <http://www.microfocus.com>.

Transforming Enterprise Systems

MICRO FOCUS®

Novell recasts itself as Internet guide

Fills in NetWare gaps; licenses Java, OM-Secure Link

By Laura DiDio
SALT LAKE CITY

It's back to the future for Novell.

Before an enthused crowd at its annual BrainShare conference last week, a newly unfettered Novell, Inc. again repositioned itself as an Internet company instead of an applications services firm.

Vowing that cyberspace will not be owned by "one" company — a thinly veiled reference to Microsoft Corp. — CEO Robert Frankenberg declared that the "Internet is LANs, and no one knows LANs like we know LANs."

Frankenberg touted the first server license for Sun Microsystems, Inc.'s Java scripting technology as well as a licensing and development pact to embed Open

Market, Inc.'s OM-Secure Link electronic commerce technology in NetWare.

He also ticked off five key initiatives that would give users a one-stop solution. They include making LANs smart by enhancing NetWare, interconnecting smart networks, standardizing developer interfaces using Net2000, providing rich network access using GroupWise and its feature set, and deploying NetWare Embedded Systems Technology to extend network connections beyond standard LANs and PCs.

Users and analysts said the announcements filled in many of the gaps in Novell's tactical strategy, most notably direct links to Windows NT Server. But they complained that Novell did not articu-

late a cohesive plan of execution or detail how it will sell the "new Novell" beyond its installed base.

"In terms of trying to create a directory that ties multiple environments together, they're not doing that. It's good to put Java on NetWare, but it [doesn't] solve the longer, fundamental business problems Novell has," said Jamie Lewis, president of the Burton Group, Inc.

Still, some users said they were glad that Novell is on the move again — even if the moves at this point are defensive maneuvers to catch up to Internet service providers such as Netscape Communications Corp., according to John Olsik, an analyst at Forrester Research, Inc. in Cambridge, Mass.

"Forging links to the Internet

and extending [NetWare Directory Services] to run on other platforms is key for us because we need to link our local desktops to

remote databases and servers, and the Internet is the way to do that in the future," said Steve Austin, MIS director at Helicopter Support Inc. in Orange, Conn.

Novell's latest alliances represent the first steps in moving NetWare beyond the client/server model, Frankenberg said. His plan is to move the server model

to a "service model" and form a post-client/server architecture.

To achieve this goal, Novell must embrace an open architecture that delivers a Universal client, a Universal network and Universal services, Frankenberg said. Novell's ambitious client/network Internet blueprint calls

for guaranteed quality of service, a secure infrastructure for the next generation of application servers and easy access to organized information anywhere on the enterprise.

In this new client/network model, NDS and the Net2000 application programming interface (API) will allow Java applications to be accessed, stored, managed and shared across the network. To address the electronic commerce market, Novell will integrate OM-Secure Link with its NetWare Web Server. This will give users security on the Web.

The company also launched the alpha version of its Net2000 API initiative. Net2000 gives developers an easy way to write NetWare applications across multiple platforms. It can also run Visual Basic applications.

Mark Herder, manager of data communications at the Dartmouth Hitchcock Medical Center in Lebanon, N.H., said if Novell doesn't deliver on the Internet and the Net2000 initiatives as well as maintain support among applications developers, "they won't be anywhere a year from now."

GroupWise XTD hits the beta trail

By Tim Ouellette
SALT LAKE CITY

At last week's BrainShare '96, Novell, Inc. provided users with their first glimpse of GroupWise XTD, which is now in limited beta testing.

The Provo, Utah, company hopes improved administration and the inclusion of document management and workflow features will sway users to upgrade from their current GroupWise 3.x and 4.x installations.

GroupWise 4.1 is messaging software based on file-sharing architecture, which, like competing products, can become unwieldy when scaling to large enterprises. GroupWise lags in third place in the LAN messaging market behind Lotus Development Corp.'s CC:Mail and Microsoft Corp.'s Mail.

XTD, based on a client/server architecture that frees up the client from much of the message-processing duties, is the upgrade path for 4.1 users.

At Auburn University, where the number of GroupWise users is 300 and growing, "the new [consolidated] administration features are something we are looking forward to," said beta tester Brian Anderson, an information technology specialist at the school in Montgomery, Ala. "As it is right now, GroupWise adminis-

tration is kind of spread out, and you have to log in to certain servers to do certain tasks."

One new linking tool will automatically link a new GroupWise XTD mail domain with the domains already on the network. This currently is a time-consuming process done manually by GroupWise administrators.

The single point of administration for both the network and GroupWise XTD will help cut the cost of ownership for users, according to Eldon Greenwood, Novell's groupware product manager. But electronic-mail administrators may have to brush up on their NetWare.

All of GroupWise XTD's administration will take place from within the NWAdmin application in NetWare, making use of NetWare Directory Services. In fact, GroupWise XTD users will get first crack at the administration module found in Novell's NetWare upgrade due this fall. The module will ship as part of XTD.

Right now, Novell has to get the product out the door. Lotus' Notes 4.0 is on the market, and Microsoft's Exchange is due next week. GroupWise XTD is slated for delivery by midyear, though sources expect that to slip slightly to late summer or early fall, especially with Novell predicting a four- to six-month beta period.

Remote Monitoring gets distributed

Technically Elite adds 'missing link' to cover big networks

By Patrick Dryden

Managers of widespread client/server networks will get a powerful new way to monitor traffic flows and tie-ups this week.

Technically Elite, Inc. in Campbell, Calif., will unveil a PC-based turnkey product called DomainMeter 7000. Some call it the "missing link" in Remote Monitoring (Rmon) and troubleshooting technology because it provides an intelligent collection point for network traffic data.

Furthermore, network managers reportedly will be able to retrieve traffic reports via the World Wide Web rather than through an expensive network management console.

Problem solver

Technically Elite has identified and addressed a lot of problems — maybe too many, said Brian Burba, an analyst at International Data Corp. in Framingham, Mass.

"It's a great idea to drop this box into several network sites and link them all via the Web for direct reporting," Burba said. "But they're aiming high. It will be quite an accomplishment if they

can pull it off."

With DomainMeter, those responsible for hundreds or thousands of network segments reportedly can designate Rmon collection points to gather, filter and act on each segment's performance data. As a result, central administrators won't get overwhelmed with too much data.

"This is the missing piece of the Rmon puzzle," said Greg Cline, director of network integration and management research at Business Research Group in Newton, Mass. "Users have needed Rmon agents that scale so they can establish domains to distribute management for their networks."

Founded in October, Technically Elite is the result of the merger of Network Application Technology and Technically Elite Concepts, Inc. and the companies' Rmon probes and agent software. Guiding the venture is President and CEO David Norman, founder of Businessland, Inc., Dataquest, Inc. and Creative Strategies International, Inc.

DomainMeter's "super probe" gathers Rmon utilization statistics from stand-alone probe devices and agents embedded in internets-

working gear. It provides a data repository, expert system and monitoring application on a Pentium server, which users can configure remotely.

"We need this kind of scalability to monitor 273 subnets with 25,600 nodes," said Milt Mallory, network specialist responsible for performance analysis at Stanford University in Stanford, Calif. "We can't do everything from one box, and we need the redundancy of multiple boxes around campus to gather data from probes and agents."

DomainMeter 7000 also can poll devices that report via the Simple Network Management Protocol, Norman said. This lets managers combine diverse data in unique reports that could help them monitor, for example, the utilization of a specific router path. And DomainMeter has enough native intelligence to take action locally and automate management tasks, as well as pass up alerts to central administrators.

The packaged monitoring system costs \$6,995. It requires Technically Elite's MeterWare analysis software for Windows and Unix-based systems.

PeopleSoft and Sybase

just connected.

PEOPLESOFT® APPLICATIONS ARE NOW AVAILABLE ON SYBASE® SQL SERVER™ 11.

Planning for business. Now you can have the flexibility of PeopleSoft's integrated applications for distribution, manufacturing and human resource applications. Matched with the unparalleled price/performance and scalability of Sybase System 11. So you can make informed decisions. Quickly. And easily manage constant change. Bully for him!

Talk about a rekindled Wall Street romance. IBM's stock price hit a five-year high of \$128.88 in late February, amid a general upsurge of high-tech issues. While the stock has fallen about 10% since then, the company's financial picture is a continent away from the days when Louis V. Gerstner took over as CEO in the dismal spring of 1993.

Financial analysts say Gerstner has made some smart moves, including cutting costs and nixing a breakup plan.

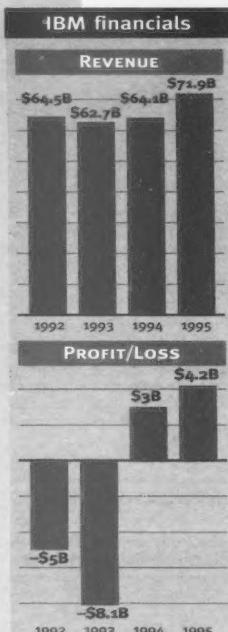

A reinvigorated IBM is also devoting more resources to professional services and building next-generation products using CMOS technology. Both areas provided revenue growth last year and could continue that trend this year.

For example, services grew 31%, to \$12.7 billion, in 1995 and became IBM's second-biggest revenue center. And hardware sales grew 10%, to reach \$35.6 billion.

Looking toward future areas of strength, analysts had mixed views. "I wouldn't say that IBM is in a real leadership position yet with some of the interesting things going on in the Internet or with intranets," said Martin Ressinger, an analyst at Duff & Phelps Investment Research in Chicago. "But there's a lot of [IBM] hardware out there."

One of IBM's key strengths remains its trusted brand name with medium-size and large companies looking to buy dependable departmental and enterprise servers. Even the IBM PC Co., which has been a perennial weak area for the firm, is showing growth potential with its emphasis on higher-margin PC servers.

IBM ghosts haunt CEO

CONTINUED FROM PAGE 1

"Three years ago, you mentioned IBM and everybody looked at you like you were talking about a dinosaur," said M. Lewis Ternes, chief information officer at the University of Miami. "Now they're in the same boat as everybody else. But that doesn't mean you exclude the Suns or the HPs or the Dell's."

There is almost universal agreement that IBM is better off today — both financially and strategically — than it was before Gerstner's hiring.

The former RJR Nabisco executive gets widespread credit for cutting costs, shaking up the complacent IBM culture and forcing its different divisions to work in relative harmony. He also caught a major break when the mainframe made its recovery in 1994.

Sixty-eight percent of users surveyed by Computerworld said Gerstner has been effective at improving IBM's financial health. But only 48% rated Gerstner as effective in leading IBM into new technology areas, and just 28% said he has done a good job of sharpening the company's customer focus — one of his top priorities.

Interviews with users and feedback from the survey point to several areas where IBM still faces demons:

- The Internet and corporate intranets are great opportunities, but IBM's technology and market presence have lagged behind vendors such as Sun Microsystems, Inc.
- Despite its June 1995 acquisition of Lotus Development Corp. and its Notes group-

ware, IBM has yet to prove it can become a heavyweight in client/server software.

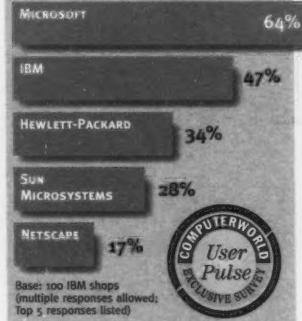

• Service and support remain sore spots for a significant percent of customers, who are feeling the pinch of IBM's staff cutbacks. And customer loyalty has been frayed by IBM's missteps in key areas such as mainframe storage and networking hardware.

Survey supports 'net strategy'

A majority of survey respondents agreed with Gerstner's much-publicized contention that the Internet will shift the market back toward large servers. But some users and analysts said that doesn't necessarily mean IBM will be the first choice of customers (see story at right).

For example, Brigham Young University in Provo, Utah, plans during the next five years to move from a mainframe to a client/server setup with Unix servers and

Which vendors are best positioned to bring new technologies to customers?

PCs with Internet access. "I could go to lots of places for that technology," said Kelly McDonald, executive director of university computing services at the school. "At this point, I wouldn't say we automatically look

The Eagle soars ...

By Craig Stedman

Project Eagle, IBM's long-promised attempt to make its client/server software less expensive and easier to install, is finally ready to leave the nest.

Six months behind schedule, IBM this week will introduce a multipurpose line of IBM Software Servers that combines almost 60 products in seven integrated and pretested packages designed to take on Microsoft Corp.'s Windows NT-based BackOffice suite.

The two suites are similar in scope, although Microsoft lacks a transaction manager and a groupware server that matches Notes. IBM also is making it easier than Microsoft does for customers to use rival products alongside its servers, analysts said.

Code-named Project Eagle, IBM's suite includes servers that handle Notes, databases, transactions, Internet access, communications, systems management

and directory/security. The bundling is a key part of IBM's strategy to shed its lightweight status in the client/server software market.

"It's not like there's any technical innovation here. It's just a repackaging," said Sally Cusack, an analyst at The Standish Group International, Inc. in Dennis, Mass. But Project Eagle at least makes IBM's products easier to buy and install, she added.

Until now, the job of integrating the client/server versions of IBM products such as CICS and DB2 had fallen squarely on customers' shoulders. "That can be a real challenge," said Ed Wehner, manager of business information systems at MEMC Electronic Materials, Inc. in St. Peter's, Mo.

"You buy one piece from here and one piece from there, and there are a lot of places where things can fall apart," Wehner said. Different IBM units were also quick to blame one another, he added.

to IBM for any solutions."

IBM has received similar responses from other customers who couldn't wait for the firm to deliver competitive products and turned to other vendors instead.

Edward D. Jones & Co. stores all 3T bytes of its mainframe data on EMC Corp. disk arrays and still considers IBM as "trailing in that market," said CIO Rich Malone. Likewise, the St. Louis brokerage turned to Sun and Oracle Corp. for a client/server system that it is rolling out at its headquarters and 3,200 branch offices.

"Back when we first did the architectural work, IBM wasn't strong in client/server," Malone said. "If I was starting now, they might be a player. But I already made my decisions."

One of the key businesses in which IBM has long fallen short is client/server software. Gerstner has made changing that a top priority, as evidenced by his acquisitions of Lotus and Tivoli Systems, Inc. He also put developing for Microsoft Corp.'s Windows NT on par with IBM's OS/2 and AIX operating systems.

The grudging embrace of NT showed

that IBM "has started to become more pragmatic," said Judith Hurwitz, president of Hurwitz Consulting Group, Inc. in Newton, Mass. But IBM still needs better marketing and channel support for its software, she added.

For all its attempts, IBM still falls a distant second to Microsoft in its perception as a technology innovator, according to the *Computerworld* survey (see chart). Microsoft also is seen as the biggest threat to IBM because of its hegemony on the desktop and the potential of Windows to grab a big chunk of the server market.

"Microsoft is the IBM of 20 years ago," said Bob Barone, vice president of information technology at Broadcast Music, Inc. in New York. "We've always been IBM bigots. [But] now, with this more PC-based type of environment, I just haven't seen them take the lead."

Service, support suffer

"In the distributed area, IBM needs to catch up," agreed Russ Fuller, director of IS operations at New York State Electric & Gas Corp. in Binghamton, N.Y. Fuller, a Notes user, said he is happy that IBM "seems to be leaving Lotus alone, which is what we hoped they'd do."

On the other hand, some customers say they believe IBM is leaving them alone a bit too much. Thirty-one percent

of the survey respondents said IBM's service and support have gotten worse during the past three years, when IBM cut its field staff and increased fees.

Most users said there are fewer IBM sales representatives and service engineers to go around. But several users said the lack of bodies has been offset by a reduction in IBM's bureaucratic bloat, which allows for quicker decisions.

"IBM is more proactive and can move much faster," said the University of Miami's Temares, who recently negotiated an Internet access deal with IBM in less than a month. The school earlier had settled on a long-distance carrier, "but they just didn't move fast enough."

Gerstner "certainly gave [IBM] a good wake-up call," added Sam Albert, a consultant in Scarsdale, N.Y. "Now comes the real challenge of producing new revenue streams to replace the old IBM."

Bitten by the 'net bug

IBM has caught the Internet/intranet bug big-time, but the company is still playing catch-up to competitors such as Sun.

IBM's new mantra is "network-centric computing." And Chairman Louis V. Gerstner predicts the coming Internet era will be tailor-made for IBM's large systems.

"Everything about the Internet and intranets plays to [our] strengths," he said during a speech to financial analysts in New York this month.

IBM set up a new Internet division last December, and the company is building World Wide Web hooks into all of its servers plus key software products such as CICS and DB2. Meanwhile, its global network unit plans to take on AT&T Corp. and MCI Communications Corp. in the Internet access business.

The Internet "is nothing short of an obsession within IBM," said David Andrews, a consultant in Cheshire, Conn. "Everyone has quickly figured out that the way to get discretionary funds [for a project] is to show that what you're doing ties in with network-centric computing."

Some users say Gerstner's optimism rings true. As customers move to a more network-based approach to computing, "people are going to find that they do need a lot of muscle and security" at the server level, said Carl Gerberich, vice president of information services at Marist College in Poughkeepsie, N.Y.

But others said that even if the Internet/intranet wave does portend good things for server vendors, IBM won't necessarily be the big beneficiary.

"That's a nice wishful thought, but any hardware man can jump up and say that," said Eric Singleton, director of information systems at AlliedSignal Technical Services Corp. in Columbia, Md.

Sun and other vendors have been preaching the gospel of network-oriented computing for a lot longer, putting IBM in catch-up mode, said Rich Malone, chief information officer at Edward D. Jones & Co., a brokerage in St. Louis.

— Craig Stedman

finally!

IBM also is adopting a single pricing format across all of its servers. Included will be a switch to concurrent user licensing, which was prompted by customers complaining that straight per-seat pricing became too expensive as installations grew in size.

Although customer letters detailing the Project Eagle servers have already been posted on IBM's World Wide Web page, pricing remains a closely guarded secret. Sources at IBM said they will cost less than the sum of their parts, but analysts noted that customers don't always need all the pieces that come with the servers.

OS/2 and AIX versions of the Project Eagle servers are already available or will ship in early May. IBM is initially announcing Windows NT support only on Notes and its database and Internet connection servers. The other four will get NT support late this year or early next year, officials said.

Gerstner hasn't been afraid to send members of the IBM management team packing, much to the liking of some users. "He's done some things with senior executives that [sent the message], 'Hey, put up or shut up.' That's produced results," said Russ Fuller, director of information services operations at New York State Electric & Gas Co. in Binghamton, N.Y.

STEVE BURNS

OMG picks OpenDoc, puts users in quandary

By Frank Hayes

How will corporate desktops connect to an object-oriented enterprise backbone? The answer to that question got murkier last week as the Object Management Group consortium of vendors and users selected OpenDoc as its preferred way of linking desktop applications with enterprise object middleware.

OBJECT MANAGEMENT GROUP

OpenDoc, a system for assembling software components into applications, is being developed by IBM and Apple Computer, Inc. for the Windows, OS/2, AIX and Mac OS operating systems.

But most corporate information systems shops already have a standard for connecting software components: Microsoft Corp.'s OLE, which is built in to Windows.

The OMG's choice of OpenDoc puts some users in a bind. "I like the technology of OpenDoc, but the de facto tool that is commonly used on the desktop is OLE," said Hide Horiuchi, architecture planning manager at AT&T Corp.'s Wireless Services division in Kirkland, Wash.

During the past two years,

large enterprises have used OMG's Common Object Request Broker Architecture (CORBA) as a standard for building object-oriented enterprise networks. Most users expected to use Windows-based OLE on the desktop and CORBA for higher-level services at the network level, said Tom Hein, manager of technology integration at Deere & Co., a heavy-equipment maker in Moline, Ill.

OMG in Framingham, Mass., is working on a standard way to link OLE to CORBA-based networks. But Microsoft has been dragging its feet in providing some of the technical information needed to create that specification [CW, Feb. 12].

In the meantime, the linking of OpenDoc with CORBA will give users an alternative approach for linking OLE components and applications with CORBA networks.

OpenDoc will be modified so that applications developed with it can be linked to CORBA networks. OLE components can be used in OpenDoc applications, said Steve Mills, general manager at IBM's Software Solutions division. The resulting applications also will be able to interoperate with CORBA applications and services on operating systems that don't support OpenDoc.

Are objects right for everyone? See page 101.

Intranets

CONTINUED FROM PAGE 1

ment about its commitment to the Internet. "The key is to have real products to show. Sun can't rest on the laurels of Java," said Sylvia Clark, a senior analyst at Aberdeen Group, Inc. in Boston.

What lies ahead

Sources said the company's SunSoft division will try to build on Java's burgeoning popularity by introducing the following products:

- Solaris Internet Server will officially be unveiled at Network/Interop '96 next week in Las Vegas, but Sun executives will preview the software tomorrow at press conferences in New York and San Francisco.

The Internet server was designed to deploy Web sites and groupware business applications on corporate networks and the In-

ternet. It costs \$1,295 and runs on Solaris. It includes Hypertext Transport Protocol Web server software and full Domain Name System support.

- Java Objects Everywhere (JOE) is Java-based software that links Java applications with enterprise networks based on the Common Object Request Broker Architecture (CORBA) middleware standard. Available immediately as a free download, JOE initially supports Network Enterprise Objects (NEO), Sun's version of CORBA [CW, March 4].

- Java WorkShop 1.0 is a set of cross-platform Java development tools, due in May, that lets users create Java applications or integrate Java applets with Web sites. The product costs \$295 and includes a Web browser, source editor, compiler, debugger and project manager. It supports Solaris and Microsoft's Windows 95 and Windows NT.

- Internet Workshop 1.0 is a bundled development environment

that can be used to create enterprise-wide client/server applications based on Java. Internet Workshop 1.0 packages Java WorkShop along with the JOE and NEO products.

- Solstice Mail Server and Client provides direct Internet mail access without the need for an Internet gateway. It supports the Internet Messaging Access Protocol, which ensures that mail can be sent between disparate mail systems without having to be converted. The client portion gives remote users the ability to view message headers and decide which messages to download.

As reported already, Sun is introducing Netra Internet Server 3.0, which is based on its 64-bit UltraSPARC microprocessor. The hardware is aimed at corporate customers.

Finally, the company is creating Sun Internet Practice, a consulting group that will offer development, design and management services.

OLAP integration

BusinessObjects ties in query, reporting features

By Juan Carlos Perez

A new database tool from Business Objects, Inc. combines on-line analytical processing (OLAP) with query and reporting features.

With Business-Objects 3.1, users had to switch to an OLAP application to analyze data multidimensionally.

Only then could they rotate and slice data to extract more information.

Good mix

What sets Business-Objects 4.0 apart is its combination of query and analysis with the product's metadata feature, which was designed to shield end users from the complexity of relational databases, said Richard Finkelstein, president of Performance Computing, Inc., a consultancy in Chicago. This combination improves the product, but it isn't an earth-shattering breakthrough, Finkelstein said.

"Integrating OLAP with traditional query and reporting is important because users need both tools to get a complete

business picture," said Teresa Wingfield, a senior industry analyst at Giga Information Group, Inc. in Cambridge, Mass. Users don't want to switch between a query and an OLAP application, she said.

Beta tester James Rischard, a

feature, he added. He said he plans to expand his user base of 10 chemical engineers and microbiologists to about 20 with this new release.

Robert Moran, director of decision support research at Aberdeen Group, Inc. in Boston, said adding multidimensional analysis to BusinessObjects is "a significant improvement, a fine evolutionary step, that makes this product an enterprise tool."

Wingfield said she would like the product to let a user transfer processing from a client machine to a server in real time.

BusinessObjects 4.0 lets users schedule the automatic generation of reports in advance, according to the Cupertino, Calif.-based company.

Pricing per client is \$595 for the query and reporting module, \$695 for the OLAP module and \$150 for the module that allows schedule processing. The designer module for configuring the tool and the optional supervisor module for security features each cost \$1,995.

BusinessObjects combines on-line analytical processing with query, reporting tools

systems analyst at Eli Lilly and Co.'s manufacturing division in Indianapolis, said the software offers added flexibility.

And the interface—with wizards and drag-and-drop capabilities—makes it easier to configure the tool, Rischard said.

End users will find the new version easier to use and more powerful, thanks to the OLAP

"SAS software is a driving force in understanding business data."

When you're the largest independent retailer of gasoline in the U.S., with over 2500 stores and annual sales topping \$3.5 billion, one small change in fuel prices can have a big impact on the bottom line. That's why Circle K Corporation's Petroleum Products and Services Division turns to the SAS System.

"Its analytical capabilities, ease of use, and ability to handle large amounts of data put it above and beyond other software," says Mary Niles, Petroleum Systems Analyst for the division.

Fitting Circle K's Information Needs to the Letter

Circle K's business analysts say SAS software has meant tremendous time savings in day-to-day business tasks. According to Dianne Hurley, Director of Petroleum Pricing and Ordering for the division, "SAS software lets us forge forward with our data, enabling us to create pricing models, volume predictors, and budgets in record time. This, in turn, lets us make decisions much more quickly."

Data regarding gasoline pricing is gathered into GMARD—short for Gasoline Marketing Analysis Relational Database—a system built with SAS software. From there, the data is transformed into meaningful business information for executives throughout the Petroleum Products and Services Division. Niles says, "The software lets

Dianne Hurley and Mary Niles of the Circle K Corporation.

us easily add other applications and functionality." Now in development is a SAS-based EIS for non-technical executives. "It's a big goal of ours to provide executive information systems that allow people at the top to quickly and easily view data and make good business decisions. To them, a picture is worth a thousand words," adds Hurley.

Products span ATM, legacy net gap

By Bob Wallace

LAN switching power Madge Networks, Inc. and ATM market leader Fore Systems, Inc. last week announced switches that bridge the gap between today's networks and emerging Asynchronous Transfer

Mode (ATM) networks.

Madge rolled out two switches: One offers Token Ring-to-ATM access and a second offers Ethernet-to-ATM access. Fore detailed ATM wide-area network access products that let users move to wide-area ATM links.

ATM is a next-generation switching technology that processes voice, data and video traffic together and does it faster and more efficiently than today's widely used switches. The much-ballyhooed technology has struggled to catch fire for several years.

"Making the move to ATM has been like

jumping the Snake River Canyon because there's been virtually no [switching] products that make the process a gradual migration," said Daniel Briere, president of TeleChoice, Inc., a Verona, N.J., consultancy.

"We think Madge's product plan makes the move toward ATM much more smooth," said Sam Hall, technical planning analyst at Utilicorp United, Inc. in Kansas City, Mo. The company is moving to Ethernet switching with an eye toward ATM.

CONTINUOUS IMPROVEMENT.

A range of mid-range departmental laser printers.

With a Printronix Continuous Form Laser Printer, there's no end to how far you can go. For example, our Heavy Duty Cycle™ L5031 and L1024 printers can deliver 50,000 to

250,000 pages per month. Month after month. And with their reliable, jam-free tractor feed mechanisms, long, unattended production runs will be routine.

The do-more, cost-less printers.

You'll have unequalled forms flexibility, too—from 4 to 16 inches wide and up to

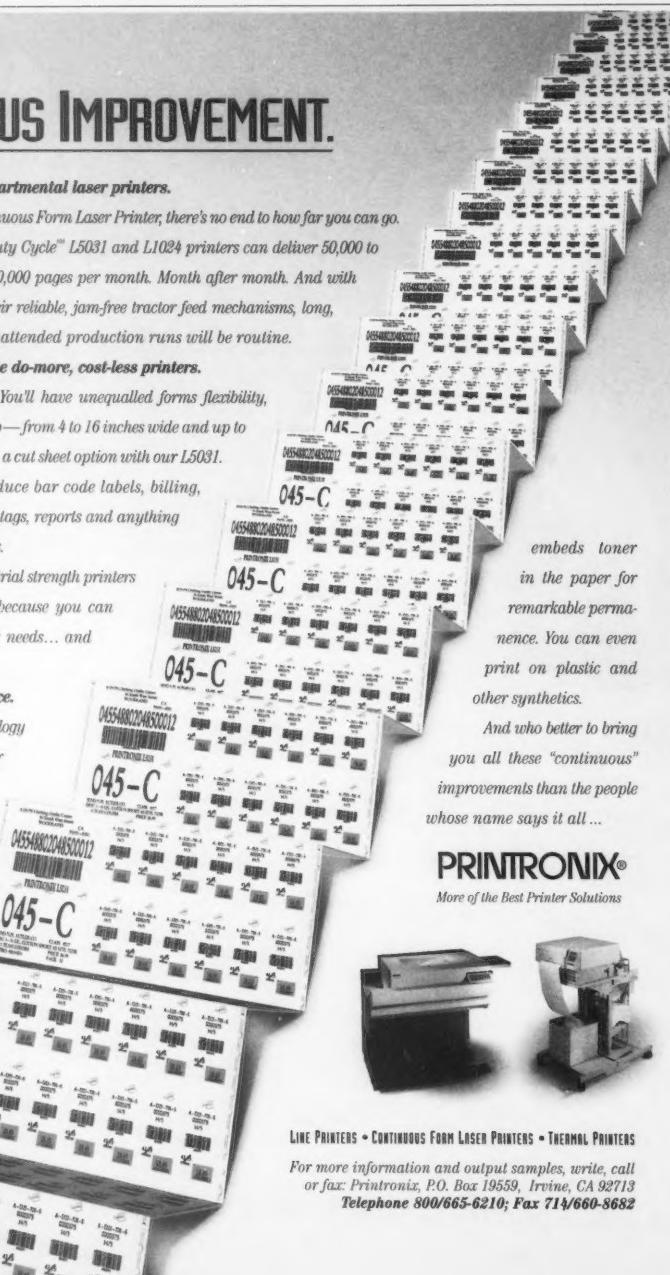

33 inches long. There's even a cut sheet option with our L5031.

That means you can produce bar code labels, billing, customer statements, hang tags, reports and anything else your department needs.

These all-purpose, industrial strength printers are more affordable, too, because you can match the printer to your needs... and your budget.

The DuraFusion™ difference.

All laser printing technology is not created equal. Our exclusive DuraFusion toner fusing process

LINE PRINTERS • CONTINUOUS FORM LASER PRINTERS • THERMAL PRINTERS

Source: Dell'Oro Group, Menlo Park, Calif.

Madge's new Collage 530 Ethernet-ATM Access Switch is a stand-alone unit with 16 switched Ethernet ports and a 155M bit/sec. ATM port. The unit costs roughly \$555 per switched Ethernet port.

While that is a few hundred dollars per port higher than some low-priced Ethernet switches, the lower-priced switches don't offer ATM access.

The Collage 540 Token Ring ATM Access Switch comes with 10 switched 4M and 16M bit/sec. Token Ring ports and a 155M bit/sec. ATM port. It will cost \$1,500 per port. Some stand-alone Token Ring switches cost less but don't offer ATM access. Newbridge Networks, Inc. will resell this box. Both products will ship in April.

Madge also announced the LANswitch LSA Access Switch. Priced at \$11,995, the switch module gives Lannet LAN switches access to ATM networks. Madge bought switching hub player Lannet, Inc. last year and will ship LANswitch in June.

"We are going with the Lannet box because it offers better port density," Hall said.

Fore also announced the CellPath line, which makes ATM more cost-justifiable by aggregating voice, video and data traffic at various-size sites onto one or more wide-area ATM links without costly ATM switches.

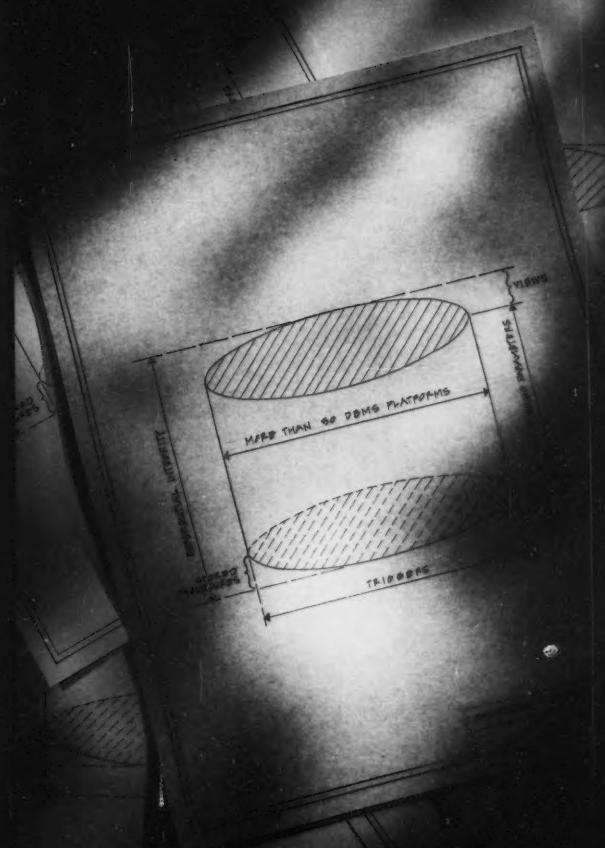

There are many devices on the market that perform the same functions for wide-area frame-relay links, which run up to 1.544M bit/sec. ATM access gear handles higher speeds and offers more advanced features.

Pricing for the low-end CellPath 90 starts at \$5,495. Pricing for the midrange CellPath 200 and the high-end 300 starts at \$20,000. CellPath 90 and 300 are expected to ship this summer.

race.

You'd better use the MIPS™ RISC processor to run Windows NT™. It's three times faster than the Pentium™ processor.

Don't come in
last, like

I did.

You see, I was presented a similar opportunity once, over 25 years ago. I was at a party, and I ran into a very animated young man from the Pacific Northwest.

He asked me if I'd like to invest in something new.

©1996 NEC Electronics Inc. Microsoft is a registered trademark and Windows NT is a trademark of Microsoft Corporation. Pentium is a trademark of Intel Corporation. Vr4400 is a trademark of NEC Corporation. All other registered marks and trademarks are property of their respective holders.

He explained how he thought that one day, people everywhere would wear athletic shoes all the time. For all kinds of things. And he showed me some drawings of shoes, with the oddest looking logo I'd ever seen.

"Sounds very interesting," I said, trying not to sound too patronizing. "But new things tend to make me nervous." And with that, I excused myself.

Now unless you've been living on another planet the past twenty years, I don't have to tell you what happened to that man and his idea.

So when my son, the computer whiz, told me NEC's 250 MHz Vr4400™ runs Windows NT up to three times faster than the 100 MHz Pentium processor, I listened.

Then I read that Microsoft actually used the MIPS processor to develop Windows NT. And that lots of Fortune 500 companies are already successfully using it.

And now, looking back, I don't think I would've dismissed that young man so quickly. I'd have asked a few more questions. The same kind of questions you should be asking NEC about that amazingly quick MIPS RISC chip. Just call 1-800-366-9782 and ask for Info Pack #185. Because opportunities like this come around once, maybe twice in a lifetime.

Feel 'help'less? You're not alone.

By Julia King

Companies spend millions of dollars on information systems, then dump problems on underfunded and already overburdened help desks.

That was one of the more common

gripes at a recent Help Desk Institute and Support Services Conference in Reno, Nev.

Frontier Corp., a telecommunications company in Rochester, N.Y., is "putting in \$6 million to \$10 million in new [IS] assets every year." Yet after six months, neither managers nor help desk staffers know pre-

cisely where they are, said Ron Fovargue, customer support manager.

But that hasn't stopped users from calling Fovargue's support organization with hardware and software problems. Frontier's two help desks receive more than 13,000 calls a month from 7,500 users.

Meanwhile, some other IS-intensive companies are just now getting around to establishing a help desk.

Until about six weeks ago, workers at Community Newspaper, Inc.'s 140 daily and weekly newspapers in Massachusetts had no one to call with systems problems. Now that they do, the new, two-person help desk is getting about 600 calls a week.

"And we haven't even officially announced it yet," said Carole Sullivan, manager of training and support at the Needham, Mass.-based newspaper chain.

A lack of adequate funding is the major reason for the support gap. Help-desk budgets simply aren't keeping pace with increasingly complex technology rollouts, managers said.

At the same time, the trend is toward help desks taking on even greater and more diversified responsibilities.

VISIGENIC & ODBC THE CAT'S MEOW

Visigenic takes the bite out of your database connectivity problems. From development through deployment, Visigenic's ODBC solutions tear through connectivity barriers. Now you can capture true database independence across Windows, UNIX, OS/2 and Macintosh platforms.

Visigenic has earned its stripes as the number one industry expert in database connectivity. It currently provides ODBC solutions to major industry leaders. Hewlett-Packard, Informix, Microsoft, Oracle. And many more.

ODBC DriverSet

Visigenic ODBC drivers give you the high-speed link between your ODBC-enabled applications and the most popular SQL databases. The Visigenic ODBC DriverSet is composed of drivers, including CA-Ingres, IBM DB2, Informix, Microsoft SQL Server, Oracle, Sybase DBLib, and Sybase System 10.

ODBC Software Development Kits (SDKs)

Visigenic ODBC SDKs let you write and deploy database independent C and C++ applications across any platform. Now you can write applications just once and access any database throughout the enterprise.

Consulting, Training, Support

Visigenic offers you on-site consulting and training. A broad range of technical support programs designed to fit your needs are also available.

Visigenic is working closely with industry leaders to drive the future of database connectivity technology. To learn more about ODBC solutions from the company with quick reflexes and instant response, contact Visigenic.

Checking the IS/corporate alignment

Survey cites challenges IS execs face

By Thomas Hoffman

Which of the top information systems issues keep you awake at night?

Aligning technology with corporate goals? How about instituting cross-functional systems? Those were among the key challenges cited by the 346 North American IS executives who participated in Computer Science Corp.'s annual "Critical Issues of I/S Management" survey. The results of the poll were released last week by Computer Science in El Segundo, Calif.

Some IS chiefs struggle with

nontraditional problems. Jules D. Cohn's catchphrase du jour is "Chapter 11."

As the vice president of IS at Barney's New York, Cohn has had to put several high-flying projects on hold since the upscale New York clothier entered bankruptcy proceedings in January.

For example, Barney's was preparing to roll out a frame-relay network this month that would have given managers at its Manhasset, N.Y., outlet almost instant access to customer and merchandise data from its mainframe in Lyndhurst, N.J. The frame-relay network "would really give us a

competitive edge," Cohn said.

Meanwhile, other IS executives wrestle technology and business alignment. That's a top priority at Avon Products, Inc. in Rye, N.Y., as the cosmetics maker continues to expand globally.

Most countries besides the U.S. are behind the technology curve, but "there's a great opportunity for us to do architectural leapfrogging," said Spencer McIlmurray, vice president of information technology services at Avon. The cosmetics maker can, for example, jump from copper wire-based communications to cellular or satellite connections, he said.

Mapping IS with corporate requirements continues to be a chal-

lenge for Don LaFerla, vice president of MIS at Leggett & Platt, Inc. in Carthage, Mo., a furniture and bedding components maker. LaFerla and his staff in the past

year have had to consolidate systems from 10 Leggett & Platt acquisitions and move forward with other technology projects, all with a relatively flat IS budget.

X terminal embarks on new frontier

By Craig Stedman

That cutting-edge Internet appliance coming soon to your desktop may look suspiciously like a boring old X terminal.

To avoid being crushed by the stampede toward low-cost network access devices, some X terminal vendors are rushing to embrace the concept themselves.

Recast X terminals, which are expected to cost about \$1,000, will start to appear shortly. They will have color monitors and will be able to run Java applets and World Wide Web browsers.

Announcements

HDS Network Systems, Inc. in King of Prussia, Pa., recently released a prototype implementation of Sun Microsystems, Inc.'s Java engine for its line of X terminals. That is a prelude to a planned second-quarter release of a full-fledged Internet device with Java and Spyglass, Inc.'s Web browser.

SunRiver Corp. in Austin, Texas, also will ship on a limited basis a Java-based adaptation of its low-end X terminal in the second quarter.

Network Computing Devices, Inc. in Mountain View, Calif., expects to add Java support during the second half of this year, and Tektronix, Inc. said it is doing feasibility work with Java and browsers in its labs.

Traditionally, X terminals were display stations that relied on host Unix servers to handle processing chores.

But they sport RISC microprocessors that should be able to run Java or browser applications. They also offer wider application support than Internet appliances, said several users and analysts. Pricing for the Internet appliances is supposed to start at about \$500 without a monitor, they said.

An X terminal can access applications that run on Unix and Microsoft Corp.'s Windows NT servers as well as mainframes and

minicomputers. But some terminal vendors said adding that functionality could drive the price beyond \$1,000.

Renovated X terminals may cost more than network appliance rivals, "but their capabilities are in some respects higher," said Eileen O'Brien, an analyst at International Data Corp. in Framingham, Mass.

Tom Schlagel, a computer analyst who provides technical support for X terminals at Brookhaven National Laboratory in Upton, N.Y., said running Java applets on the machines could reduce server and network strain and still allow central administration and control. "It would essentially free you from the host [but] you'd be pulling all your applications over the network," Schlagel said.

Because the applets would reside at servers and be downloaded only for execution, X terminals shouldn't lose the ease of administration that sets them apart from PCs and workstations, he added.

Multiple choice

DEC points finger at sagging PC sales

Comeback efforts hit a speed bump

By Jaikumar Vijayan

Digital Equipment Corp. is the latest vendor to blame flagging corporate sales on weaker-than-anticipated PC revenue.

Earlier this month, desktop market leader Compaq Computer Corp. warned investors of a similar slowdown in sales. And last week, chip maker Cirrus Logic, Inc. announced layoffs of more than 400 employees due to decreased demand for its chips (see story, page 32).

The announcements renewed fears of a deepening slowdown in the corporate marketplace that could spread to other PC vendors but also create big-time price cuts for users.

Prices slashed

For instance, Compaq, Digital Equipment Corp. and IBM have already dropped PC prices by up to 27% this month. And those vendors say they are willing to make more cuts to push sales.

But the latest moves are of little consequence to companies inured to the incessant price cuts [CW, March 11].

"The way things are going for us right now, we can't wait for potential price cuts. When you need a system, you buy it," said Gary Davis, president of Animation House, Inc. in Evansville, Ind. Davis is a heavy Digital user who is in the market for Digital PCs.

Digital's announcement that PC revenue will be lower than anticipated comes less than a month af-

ter the company's decision to pull out of the high-volume consumer PC market.

With PCs accounting for 17% of the company's total revenue, the slowdown is seen as a setback for Digital's overall turnaround effort.

But Bruce Clafin, who recently left IBM to head Digital's PC business, denied that the company is dipping into the red.

"It is disappointing, but no one should interpret this as Digital is slowing or that we are losing money," he said.

Waiting for upswing

Terry Shannon, editor of "Shannon Knows DEC," a newsletter in Ashland, Mass., said the PC problems aren't enough to derail the company's comeback.

Shannon noted that all other parts of the business "seem to be intact."

In response to the sales slowdown, Digital has cut shipments to the reseller channel and initiated several cost-cutting measures that won't include layoffs, at least for now, Clafin said.

Digital will introduce a richer mix of Windows NT products into its PC lineup later this year, Clafin said.

Despite the current slowdown in sales, some observers say they think corporate demand will pick up in the second half of the year as corporations finally decide between migrating to Microsoft Corp.'s Windows NT or Windows 95.

Introducing new Microsoft Access

for Windows 95.

Now you can bring important information to those who need it. Microsoft Access is a desktop relational database that allows the people in your company to find and use the data they need to make better business decisions. Whether it's customer names and addresses, product inventory, sales figures or invoices, employees can retrieve and analyze information on their desktop quickly and efficiently. With new Microsoft Access, your people spend less time searching for information and more time making decisions that benefit the whole company.

Gathering Information becomes Intuitive so work flows without interruption.

Microsoft Access makes it easy for people to find data from various sources throughout your company's system. With Open Database Connectivity (ODBC), users can pull together data from a variety of databases, providing new insights into existing corporate data. Once data is available, the new Filter by Selection function finds answers promptly, without complex queries, and work moves quickly toward completion. And, with IntelliSense™ technology, the next generation of Wizards takes both new and experienced users step-by-step through tasks ranging in difficulty, there's never anything standing between your people and the answers they need.

Give people the tools to set their data in motion. Now that finding information is quick and easy, users can spend more time turning it into an advantage for your company. New Microsoft Access works seamlessly with the Microsoft Office family of applications. Consistent tools, like the Answer Wizard, mean users spend less time getting started, so your company saves time and money. People have the capability to take analysis another step by using Microsoft Excel PivotTable® Wizard to see the names and numbers retrieved by Microsoft Access in a clear and dynamic way. And with the Microsoft Word Mail Merge Wizard, users can combine data like names and addresses with documents. They just select the data to merge, the document to mail, and Microsoft Access sets everything up to go.

Now your company can take full advantage of database technology.

New Microsoft Access is the desktop database designed to work with the Windows® 95 operating system and the powerful capabilities of Windows NT™ Workstation. With the introduction of Database Replication, people can take work on the road using the Windows 95 Briefcase and merge offline changes when they return. With Microsoft Office and new Microsoft Access you can bring the information your people need to their fingertips. Help them find answers. Help them use their software without it getting in the way.

Clinton ups R&D budget

But knife-wielding Republicans may seek cutbacks

By Gary H. Anthes
WASHINGTON

Swimming upstream against a tight-fisted and sometimes technophobic Congress, President Clinton last week unveiled a budget designed to increase federal spending on research and development for the fourth consecutive year.

Overall spending on R&D in fiscal 1997 would rise just 2% under the president's plan, but some programs were earmarked for a big boost in bucks. For example, Clinton would give \$45 million, or 15% more, to the U.S. Department of Commerce's controversial Advanced Technology Program, which Republicans have threatened to kill entirely.

The Advanced Technology Program gives matching grants to companies and universities to pursue risky basic research. It has been branded by some as wasteful corporate welfare.

"A budget must honor our obligation to push back scientific frontiers and crash through technological barriers," said Vice

President Al Gore at a press conference. "The president's budget does. It continues our investments in the Advanced Technology Program, manufacturing extension and the National Information Infrastructure."

In that vein, the Clinton budget earmarks \$742 million for the troubled \$4.5 billion project to modernize weather forecasting systems, a whopping \$138 million more than is being spent this fiscal year. A report last month by the Commerce Department's inspector general found that a key component of the overhaul was \$175 million, or 50%, over budget and four years behind schedule.

Funding a 'fiasco'

The budget would also boost funding for the Internal Revenue Service's mammoth but troubled tax systems modernization program to \$850 million, \$85 million more than this year's budget. Two weeks ago, in a scathing indictment of the "\$4 billion fiasco," Rep. Jim Lightfoot (R-Iowa), chairman of an IRS oversight committee, said he would cancel the project next year unless the IRS can convince him within two months that it's on the right track.

Republicans weren't impressed with Clinton's proposed spending on technology, especially for the

Advanced Technology Program. House Science Committee Chairman Robert S. Walker (R-Pa.) called the budget "a blow to basic research and development and a boon to industrial policy masquerade."

Vice President Gore said the budget will "crash through technological barriers"

PC slowdown prompts cuts at chip maker

By Melissa Bane

Chip maker Cirrus Logic, Inc. last week announced plans to lay off about 400, or 13%, of its workers and refocus its product line on video graphics cards, modems and digital cordless chip sets.

The company said it ran into trouble because it overestimated the demand for PC chips and hired too many people. Cirrus added that it expects to post a loss in its fourth fiscal quarter, which ends March 31.

But analysts said the problem is specific to the Fremont, Calif.-based Cirrus and not a warning of bad times ahead for the industry as a whole. "I think more than any weakness in the PC market, Cirrus has more graphics market competition," said Sherry Garber, vice president of Semico Research Corp. in Phoenix. "I don't think their trouble should be taken as a sign that everyone else in the industry will have the same problems."

Tim Sloane, an analyst at Aberdeen Group, Inc. in Boston, agreed. "Cirrus has made it through previous industry slumps without these problems, so this is indicative of a larger problem in the company," he said.

The decision to focus on newer technologies is a smart move for Cirrus, Sloane added. "There is a lot happening in the graphics industry, and Cirrus needs to move upscale faster into 3-D and video to add sales," he said.

He said Cirrus' problems may also be tied to a slump in the upgrade market caused by more people buying new systems. "Cirrus had a good business in the upgrade grades," Sloane said.

Sloane added that as new CPUs incorporate more and more video logic, the middle market for graphics chips is shrinking. "All of those companies that are looking at making a market out of the graphics add-on boards are going to have to focus on the high end because the middle market will get eaten by the CPU manufacturers," Sloane said.

But Garber said the company should pull through this dry spell. "I think Cirrus has good products; they just overbuilt," she said.

Palmisano brings track record to IBM PC Co.

By Bob Francis

Moving to fill a vacancy open since last September, IBM appointed company veteran Samuel J. Palmisano as general manager of IBM PC Co. last week.

Palmisano, 44, doesn't have PC experience. He hails from IBM's Integrated Systems Solutions Corp. (ISSC), the company's consulting and outsourcing group.

But he does have a proven track record at IBM, according to consultant Sam Albert, president of Sam Albert Associates in Scarsdale, N.Y. "He's a trusted performer, and at ISSC he helped turn IBM from a company that just sold machines into a service company. That's quite an accomplishment," Albert said.

Analysts said Palmisano inher-

its a PC group that is markedly more stable after several years of turmoil. "They seem to have found their footing in desktops and servers," said John Dunkle, president of Workgroup Strategic Services, Inc., a consultancy in Portsmouth, N.H.

Recently, IBM has been more aggressive — in terms of both products and pricing — with its desktop and PC server lines.

How would you rate IBM's standing in the following areas?

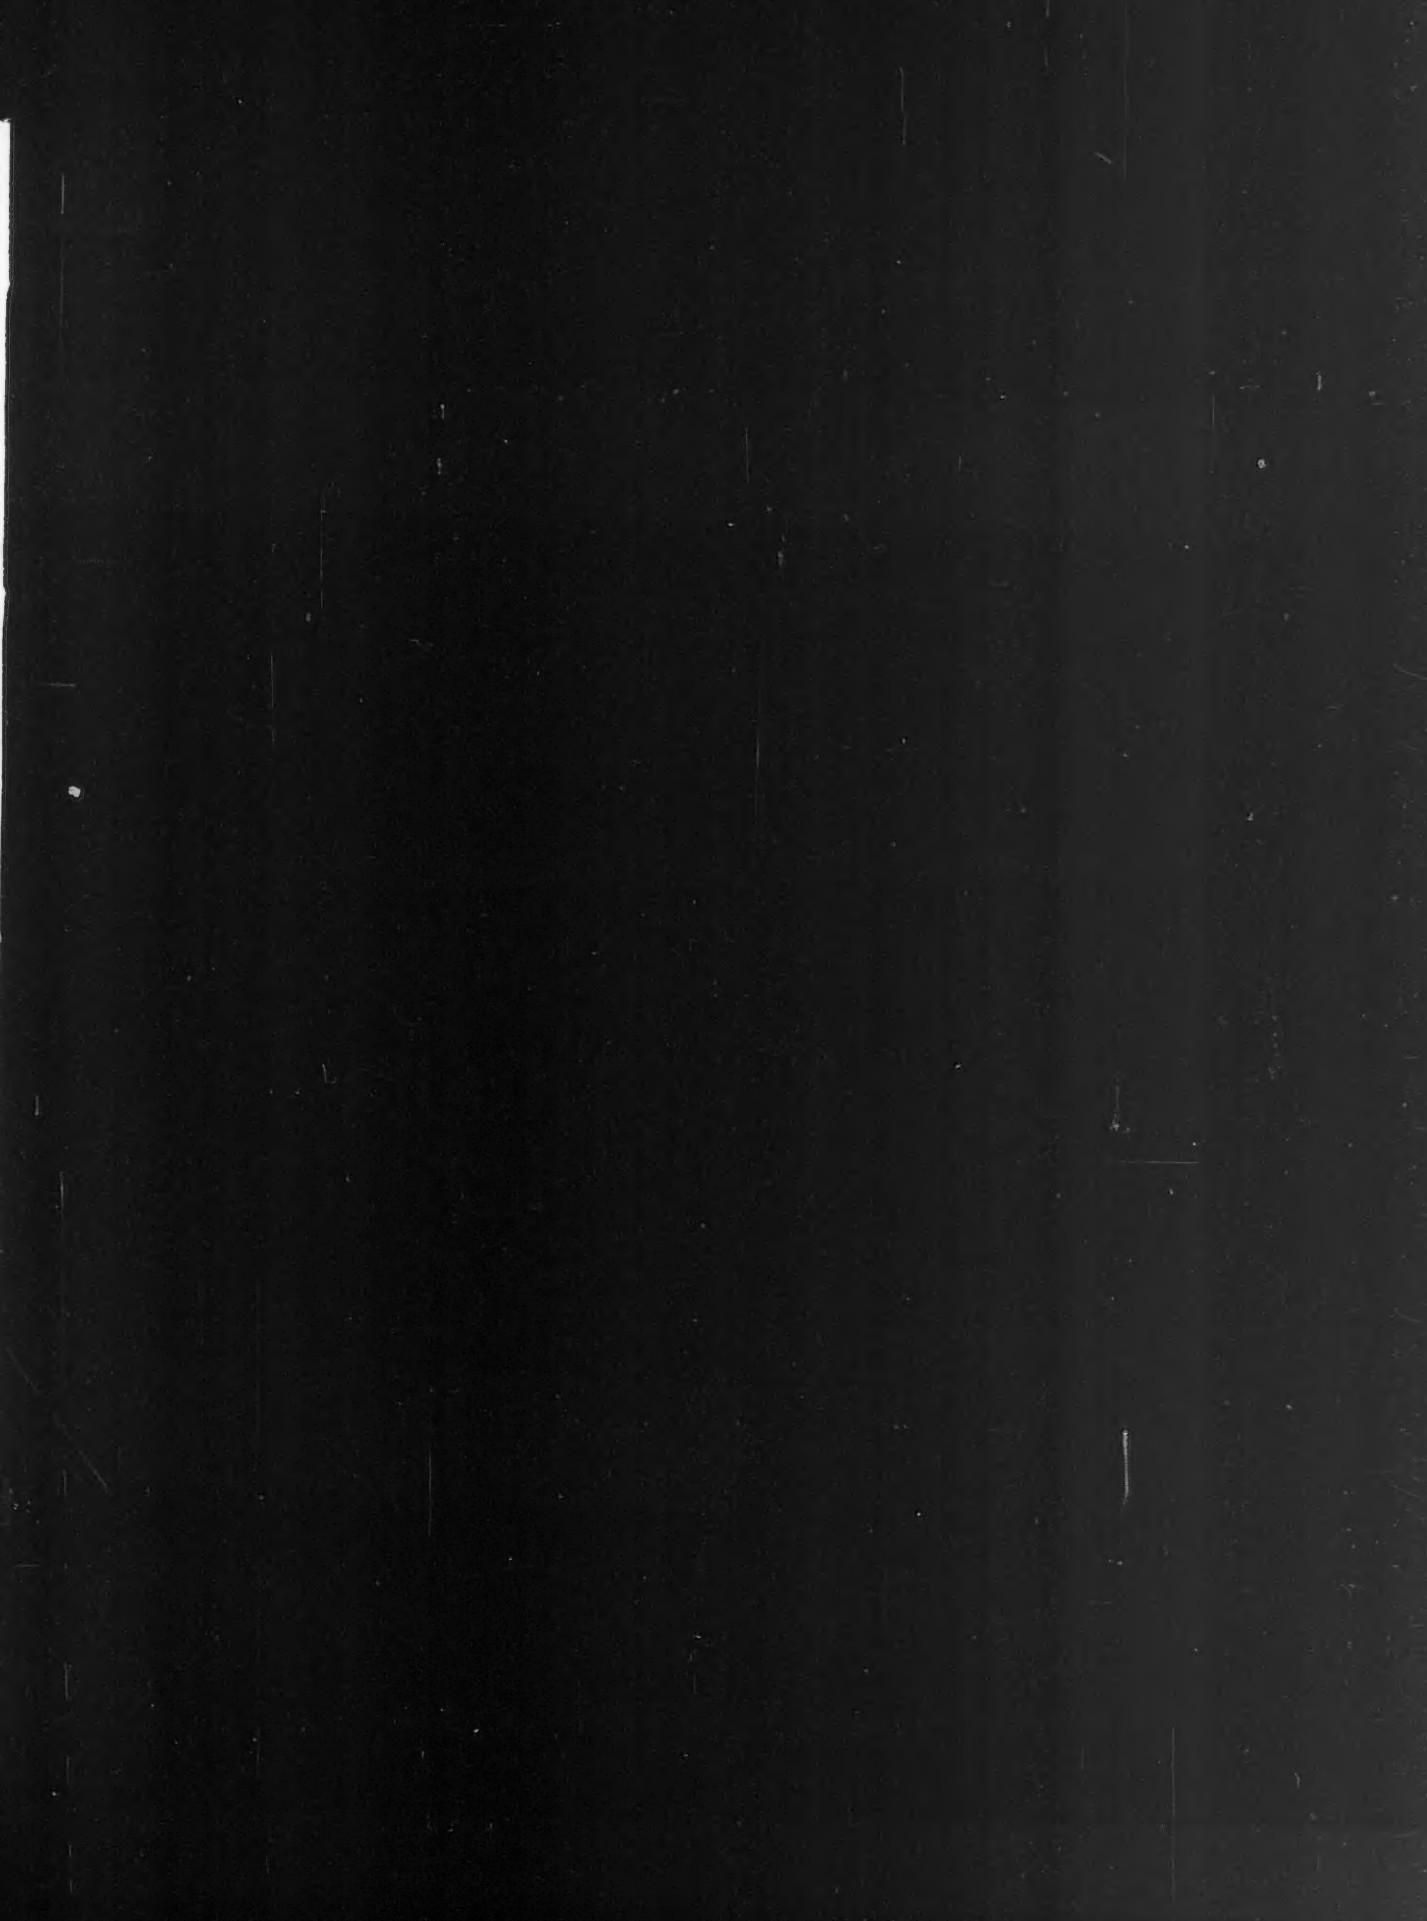

puter Corp. in the latest round of price cutting on desktop PCs.

Palmisano replaces Richard Thoman, who is now IBM's chief financial officer. Thoman joined IBM in 1994; he was charged with reversing the PC group's fortunes.

Until last year, IBM had faltered badly in the PC business. It overestimated demand in 1993, then overcompensated the next year. This led to huge losses.

The group lost market share, and precious corporate accounts, to Compaq, which supplanted IBM as the world's largest PC manufacturer in 1994.

But the IBM PC Co. returned to profitability last year, and IBM officials said strong PC and server sales contributed to good fourth-quarter results.

FIVE GREAT REASONS TO TRY THREE GREAT PRODUCTS.

1

MIGRATING FROM ANALOG TO DIGITAL

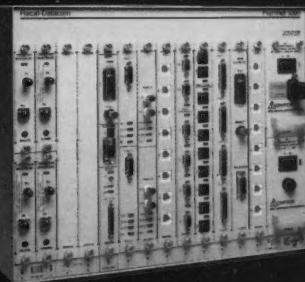

EXCALIBUR® DAPs

Excalibur Digital Access Products and DSUs come to you from the industry leader—Racal-Datacom. Whether your needs are fundamental business networking or high capacity mission-critical applications, Racal has a solution that works for you today, at your pace and prepares you for the evolution to frame relay when you're ready.

2

TRANSPORTING DATA, VOICE, ATM AND VIDEO OVER FIBER

PREMNET®

Finally, a high speed solution for transporting multiple data, ATM, voice and video traffic safely and efficiently. With the PremNet fiber backbone from Racal, you can transparently send data in virtually any format at native speeds without the need to create separate networks for each application type.

3

BUILDING BANDWIDTH TO 1.544 Mbps ACROSS YOUR WAN

ISX 5300

The ISX 5300 is the digital access multiplexer of choice for building bandwidth across your wide area network. Designed to grow with your business, the ISX 5300 effortlessly supports migration to frame relay, fractional T-1, T-1 and ATM when you're ready.

4 | REASON NUMBER FOUR

More than ever, your business depends on your network. For that reason, shouldn't you depend on a company that understands the importance of network communications? Since 1955 Racal-Datacom has helped the world's business and government organizations migrate mission-critical applications to new technologies and services. That's why all Racal products are supported by the company's strength in network management and expertise in managed migration services including network design, implementation, worldwide maintenance and support.

You can use any or all of these reasons to give us a call. Ask about our special promotions on Excalibur, PremNet and ISX 5300 products. For a limited time, we're offering free network management software, free installation with your maintenance purchase and free design services on select products.*

When it comes to managed migration, Racal has a solution. That's reason enough to call us today! 1-800-RACAL-55. Or visit us on the Internet at the Racal-Datacom Home Page, <http://www.racal.com>

5 | REASON NUMBER FIVE

WIN A DREAM VACATION FOR FOUR TO FLORIDA!

Mail in the reader service card.

Call 1-800-RACAL-55

Or visit us on the Internet at our Home Page, <http://www.racal.com>

That's all it takes to become eligible to win a dream vacation to Florida! Imagine 5 days and 4 nights at the beautiful Holiday Villas Hotel, centrally located near Orlando's most exciting attractions. Prize includes round-trip airfare for four (4), four days free rental car, tickets for four to Sea World®, Universal Studios Florida® and Walt Disney World® Resort (with admission to Magic Kingdom® Park, Epcot® Center, or Disney-MGM Studios™ Theme Park). And \$500.00 spending money to make your dream come true! Contact Racal today to find out more about our three great products and you could be a winner! *

RACAL
Communicating through technology

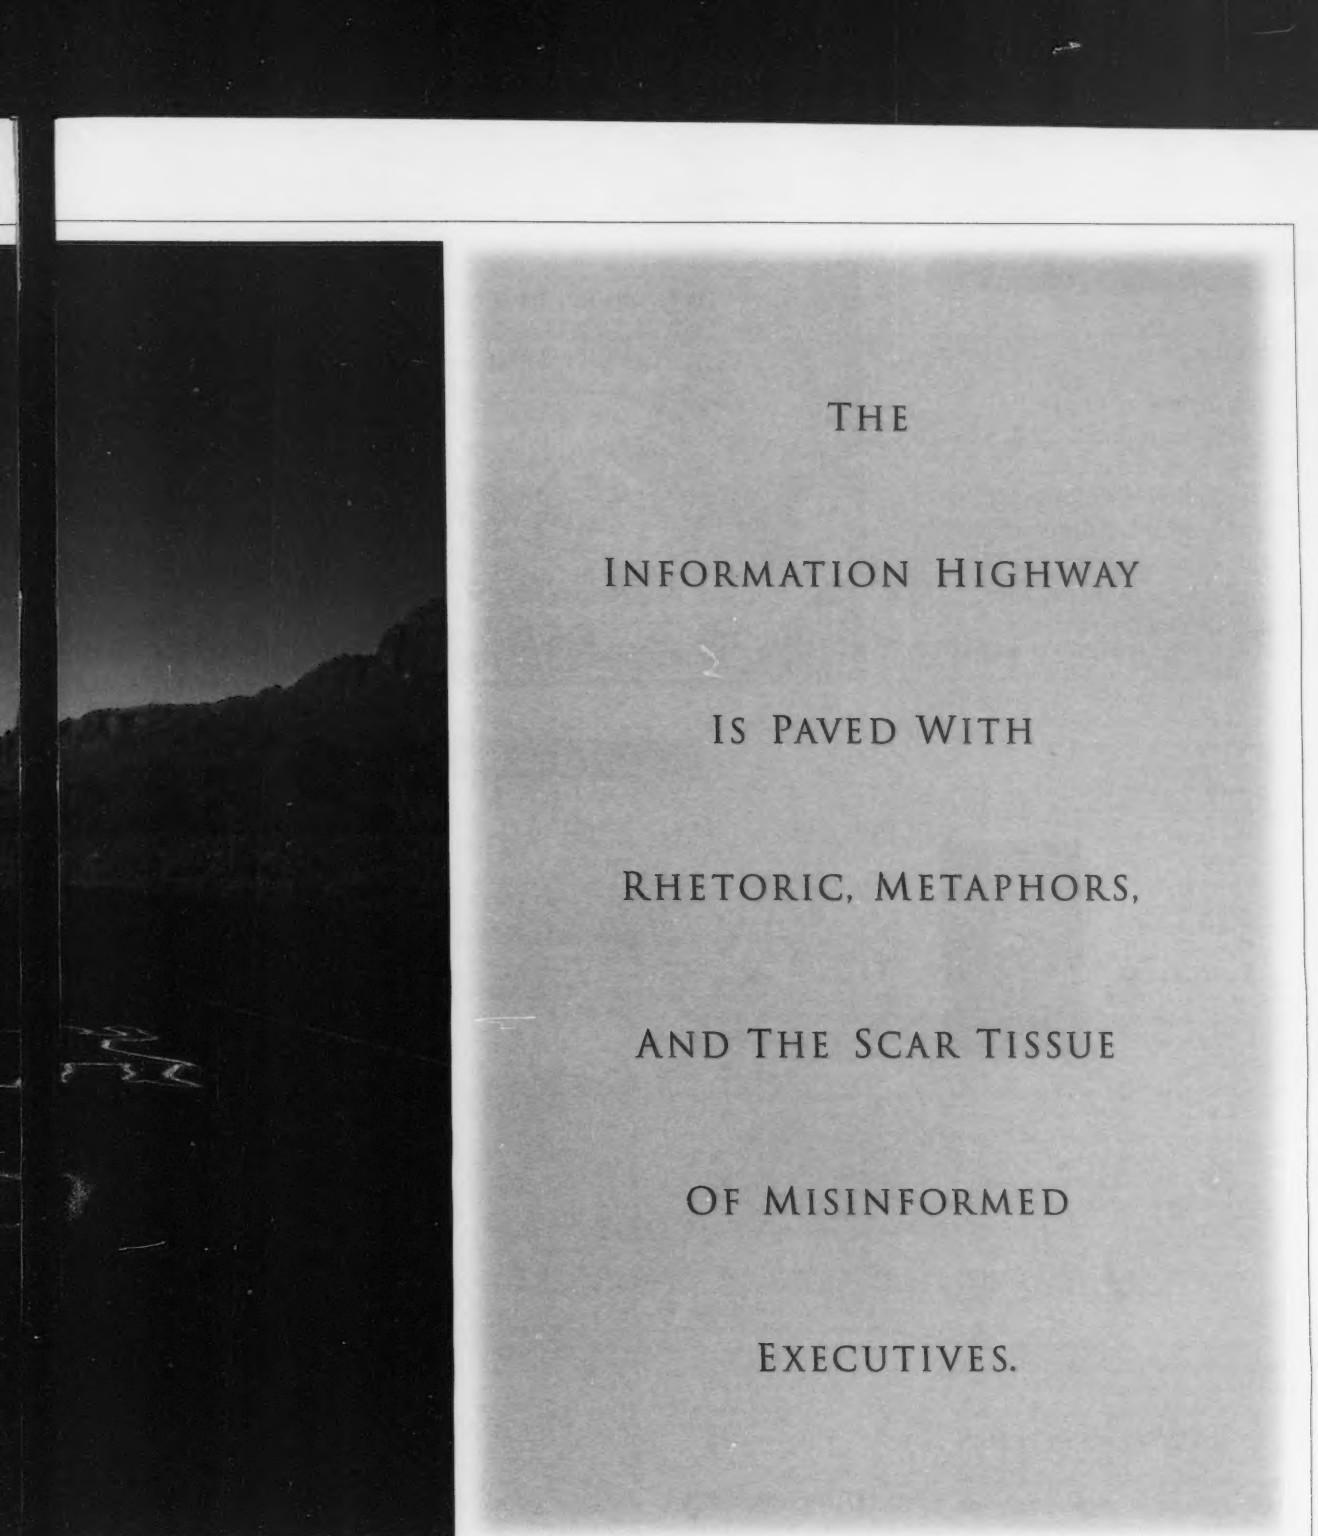

The rush to do business on the Internet is on. The question is, what will ultimately separate the winners from the losers?

A deciding factor will be your alliance with strategic network partners. Alliances that can help you capitalize on all the power

the Internet has to offer. And when it comes to the Internet, there is no better partner than the people of Cisco Systems.

We didn't just arrive on the information highway yesterday. In fact, we're one of the pioneers who helped create the Internet.

Almost every message that travels over the Internet moves through Cisco equipment. And our Cisco IOS™ software is the core technology that empowers different hardware devices on the Internet to communicate with each other regardless

THE
INFORMATION HIGHWAY
IS PAVED WITH

EXECUTIVES.

of their make or brand name, ensuring smooth, secure communications whether they're going around the corner or the globe.

All of this makes us uniquely able to help you build the type of infrastructure your company needs to employ the

Internet for marketing, customer support and most importantly, more sales.

The metaphors, rhetoric and promises will only carry you so far. In the end, experience and expertise will surely take you much farther down the road.

So visit us on the Web at www.cisco.com. Or give us a call at 1-800-778-3632, ext. 158.

We'll help to ensure that your company's trip on the Internet is a safe and profitable journey.

Editorial

Chicken Little redux

The city of Phoenix first realized it had a problem on Jan. 2, 1995. A simple application that calculates five-year payments crashed inexplicably. The problem? When the program tried to subtract 95 from 00 in the two-digit date record used in the data files, it simply bit the dust.

Jack Thomas, the city's deputy information systems director, is philosophical. "It's a good thing it crashed," he says. Had it not, the city would not have discovered that the application was flawed. "Then we could have begun calculating inaccurate payment schedules with potentially disastrous results."

It will cost Phoenix an estimated \$3 million to fix the year 2000 problem across 14 major applications that support several of the city's major departments. An analysis by nearby Viasoft, which the city hired to consult on the job, found that more than 90% of the IS department's programs use date routines that were potentially vulnerable. Will the city swallow the cost? Thomas sighs. "We have no choice," he says.

Do you?

The year 2000 program problem could turn out to be the biggest nomenon since the Michelangelo virus, but I wouldn't bet on that. Gartner Group has said the problem will cost U.S. business more than \$200 billion over the next four years. Others say don't worry: Routine upgrades and maintenance will fix the bugs in plenty of time.

Users who have been through the mill say it's not as simple as expanding all your date fields to four digits. First you have to find them, scattered across perhaps thousands of programs.

Even if you fix the programs, you still have to filter all your data records, maybe a few million of them. And what about records stored off-site?

On page 4 of last week's issue, we reported on three cases in which the extra day in February this year threw programs for a loop. I shudder to think of when that day becomes 100 years. The city of Phoenix is biting the bullet and fixing the problem before it becomes a problem. On page 83, you can read about how The Equitable is doing the same thing. I think these organizations are smart. Better to wrestle with the beast today than wait until your company's future is at stake.

Letters to the editor

IS could use chaos

I was pleased to note your short article on the use of research on chaos and complexity as an aid to solving business problems ["Fight chaos with chaos," CW, March 4].

Corporate IS would be well-advised to become acquainted with this subject to gain some understanding of the computing environments we support.

For instance, our "legacy" applications were developed years ago and perhaps were at the limits of human capacity for designing complexity. Since then, changes to programs, data, application interdependency and supporting software have created systems of such complexity that they cannot be migrated or replaced.

Within the studies of complexity, complex adaptive systems, evolutionary mechanics and the like, we might find directions to take relative to the legacy software.

Michael MacDonald
Oakland, Calif.
michael_macdonald@ccgate.apl.com

Narrow the study

A college degree says to the world that you have the ability to learn, yet according to "IS schools need improvement" [CW, Feb. 19], many employers would like to have a "Plug and Play" college graduate.

Much of the general education in the first years of college can be given in high school. Colleges should be a place for four or five years of intense study in your particular area.

A college structured this way

could be a partner to local businesses, offering students for four-year internships.

Upon graduation, the business would probably want to hire the individual. But if it does not, at least the student has four years of marketable experience.

Ryder Gibson
Orlando, Fla.

No Mac appeal

David Pensak wants Apple to find out what PC users need to switch platforms ["Apple CEO seeks customer talks," CW, Feb. 19]. I am willing to provide some of the answers.

For me to switch [from the PC], Apple would have to improve price, get real keyboards and get a real mouse.

The hard one is that Apple needs a real operating system. Give me a memory-protected, multithreaded and pre-emptively multitasking operating system. Give me a command-line window. Let me get to the guts of the machine. Get rid of the stupid menu bar at the top. Give me a task list that I can call up without having to go to the top of the screen. Let me run more programs than physical RAM will allow. Get rid of the stupid method of dealing with files and drives. To eject a disk you drag it to the trash — shouldn't that erase it? How do you log out of a network? Drag it to the trash — shouldn't that delete the network drives?

I'm not holding my breath. I have heard nothing from Apple so far that would make me even consider a Mac.

More letters, page 41

Foreign solution

There has been a lot of talk about replacing American programmers with foreign programmers ["Look out, here comes India," CW, Feb. 26].

But the reality is that offshore software development can bring down the cost of software development by 50%.

Many times, demand exceeds supply for specialized skills in the U.S. Here comes the need for foreign programmers to fulfill this demand.

According to Computerworld ["If you start now, you just might make it," CW, Nov. 20, 1995], the year 2000 date problem is going to cost \$300 billion to \$600 billion worldwide.

This cost could be reduced by 50% through offshore software development.

India is not coming here. Go there and get the solution.

Political barriers can't stop the Internet

The Chinese government last month decided to regulate the Internet and force all on-line traffic through an official channel for monitoring. The regulations forbid transmission of information considered harmful to state security or "public order."

At roughly the same time, German prosecutors prompted CompuServe to bar access for its 4.3 million subscribers worldwide to 200 sex-related Usenet newsgroups because of local German child pornography laws.

Two very different governments — for two very different reasons — have attempted to impose national authority on the Internet. Slowly but surely, governments are becoming conscious of the Internet and its limitless possibilities.

It's inevitable that some governments will try to restrict and regulate the Internet. But in the long run, most such efforts will fail. The Internet is a worldwide, borderless network beyond the control of any one government.

Internet regulation won't work for this hyper-decentralized network because damage to one node doesn't interrupt communications. Messages are simply routed around the damaged node. Censorship and regulations are treated as damage to be bypassed. Internet servers will sprout in date havens such as the Cayman Islands and Liechtenstein to offer verboten content and transactions.

The Internet is also protected by its sheer size.

Millions of messages, millions of World Wide Web sites and thousands of newsgroups all can't be monitored. And the wide use of encryption will make government controls virtually impossible to enforce.

"friendly" economic information and "unfriendly" political information? It's impossible to limit one and not the other.

This isn't to say the Internet can't or shouldn't be regulated. "Netiquette," the informal, social self-regulation of the Internet, is well-established. Certain behaviors aren't tolerated, and flaming has become a sophisticated art form.

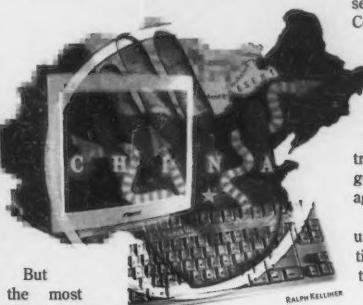

Draw the line

Government involvement should be limited to monitoring terrorism and crime on the Internet. With large volumes of electronic cash trading hands each day, it will be in the interest of governments to create international agreements against fraud and money laundering.

But only nations that promote widespread use of the Internet — without excessive restrictions — will benefit from its economic opportunities.

Some countries seem to understand. Malaysia's deputy prime minister, Anwar Ibrahim, recently said: "Censoring the Internet is not the solution. Simply closing our doors will not only hurt us, but push us back in the race for growth and prosperity."

Martin is a writer, lecturer and consultant on information technology. He is also the founder of James Martin & Co. in Fairfax, Va. His latest book is *The Great Transition*, a text on corporate transformation.

But the most potent defense against cyberregulation is money. Analysts predict the Internet will handle more than \$1 trillion in electronic commerce by 2005. Any government that wants a piece of the electronic action shouldn't impose unnecessary roadblocks.

Governments such as China that want to reap the economic benefits of the Internet and simultaneously control the data flow will face a big problem. How do you tell the difference between

In cyberspace, government censors are just "damaged nodes" to be bypassed.

John Gantz

Java: An emperor wearing no clothes?

Java, schmava! The gullible press is going bonkers over Sun Microsystems' Java programming language. *Business Week* featured Java in its "Software Revolution" report in December. Microsoft made headlines when it promised to support it. Every database and development tool vendor in the world has genuflected in its direction and promised to be Java-compliant in the future.

If you ask me, Sun has pulled off a marketing coup that dwarfs the launch hoopla of Windows 95. I mean, what is Java, really? It's a programming language — and a hard-to-learn one at that. When was the last time a programming language actually revolutionized the business? I think it was Cobol. It certainly wasn't APL, PL/I, Pascal, Smalltalk, C or C++, now was it?

But everyone seems to buy in to the Java vision. Instead of writing applications with millions of lines of code, we'll go to a library of Java "applets" and build applications from parts. Applets generally run less than 200,000 lines each. And, oh, by the way, we need only one application that runs at the client (the browser), and the server software will run on any hardware platform.

There's no guarantee all those Java applets are going to work together.

The applets are shipped to the client only when and if they are needed. Of course, with this download-it-when-you-need-it technique, we don't need expensive PCs on the desktop and all the operational overhead that goes along with them.

Right. And next year Java will feed the homeless and cure cancer, too.

Why am I skeptical? It isn't because Java is still pretty much unformed — you still have to hand-code graphics, for instance — or slow. Others will develop point-and-click development tools and compilers that speed up Java. It isn't because I think various versions of Java will sprout in the

manner of all the variants of Unix, making portability endlessly elusive. It isn't because companies such as AT&T Bell Laboratories, Macromedia and Microsoft have or are creating alternatives to Java. It isn't because Sun is a hardware company.

No, what scares me is the fundamental concept of building programs out of applets. Here's why:

- There are no common design rules for applets. Your spell-checking applet might not work the same as mine, which could affect the behavior of larger programs in which it's embedded.
- There's no certification or testing authority for

applets. How do I know the applet I'm renting from Acme Applet will perform as expected under all conditions? How do I know some cyberterrorist didn't build something ugly inside it?

• There's no design science or common wisdom about building programs from applets. How do I get all my applets to work together?

In previous research into reusable software, I discovered that developers almost always preferred using big chunks of reusable code over small hunks because of the cost of design, integration and testing. Even those who believed in the philosophy of reusable software didn't believe that building applications out of small granules of code would ever be practical.

There are times, in fact, I wonder if Java isn't a plot by Sun to sell Java-optimized chips and keep SPARC alive, aided and abetted by Oracle (which would program in Sanskrit if there were even a remote chance of skewering Microsoft by doing so). Helping the cause are all those C++ programmers looking for career enhancement and hackers looking for the legitimacy of becoming "applet developers."

Java will take its market place as just another language. It won't transform the industry.

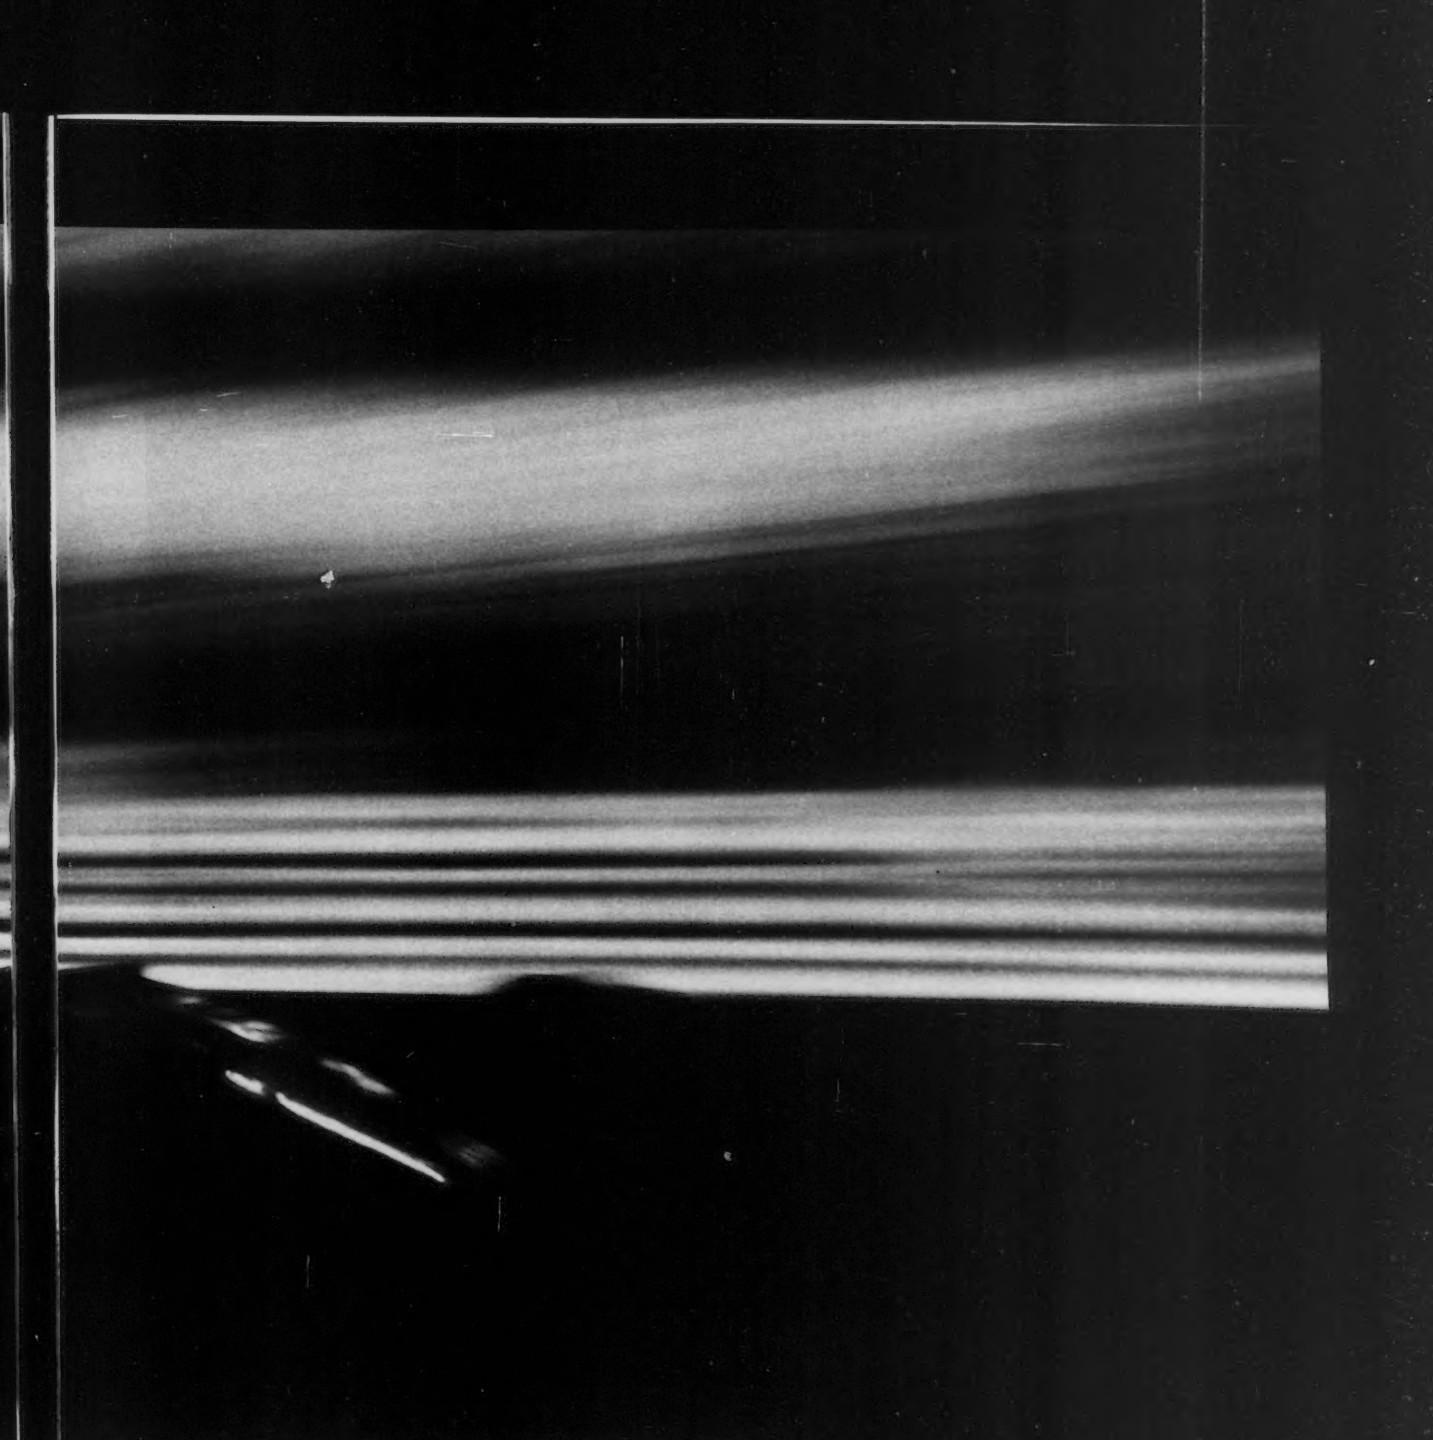

Sun has pulled off a marketing coup that dwarfs the Windows 95 hoopla.

Gantz is a senior vice president at International Data Corp. in Framingham, Mass.

**Imagine changing a tire
at over 200 miles an hour.**

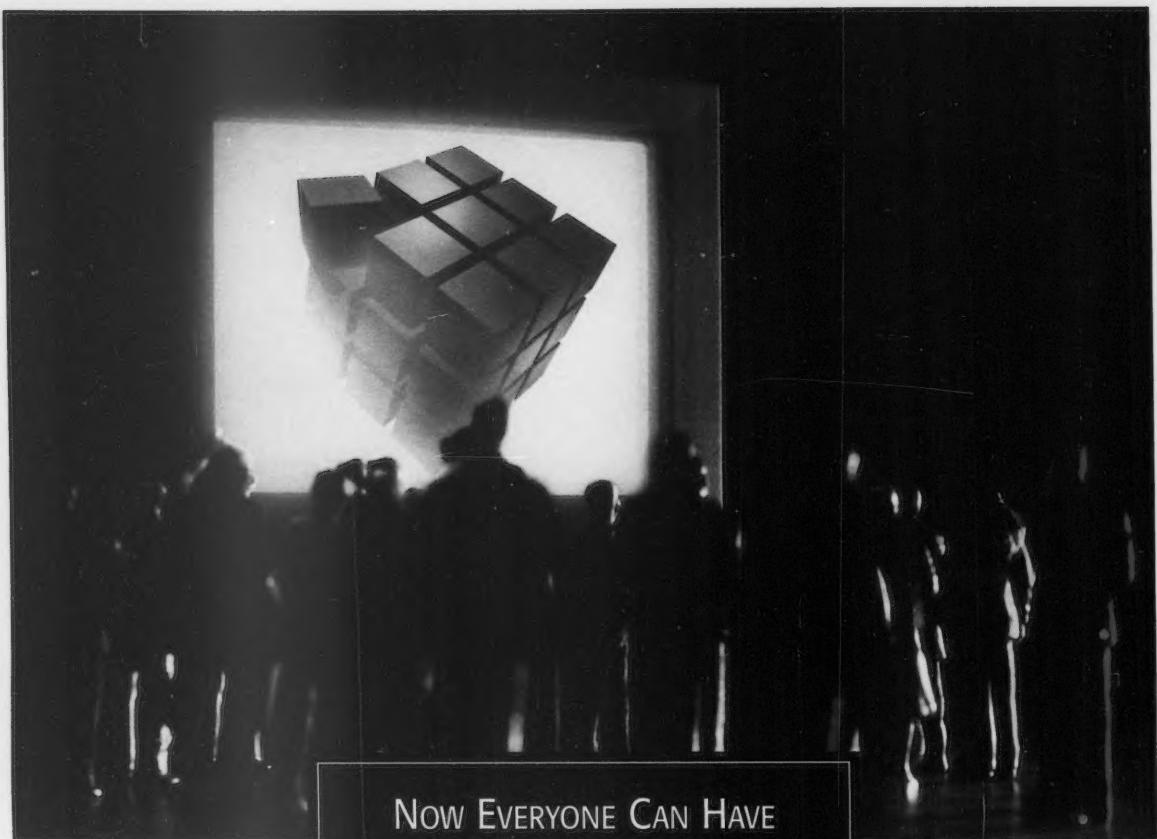

An unreasonable demand? If you're an IS manager, you face the equivalent every day. And tomorrow, you may be asked to replace the engine. Or change the transmission. And don't forget, your business can't slow down. Fortunately, there's ObjectStar™ software that makes the impossible possible. ObjectStar allows you to replace, enhance or incrementally renew your business-critical applications. And quickly move or distribute them wherever they are needed.

From servers, to mainframes, to desktops. While you and your enterprise remain in the race. And, yes, there is a track record. Kemper National Insurance Companies, Marks & Spencer, EDS[®], and Isuzu, to name just a few. For case histories, and your own test drive, please call us at 1-800-ANTARES. Let us show you how ObjectStar can help you keep your foot to the floor.

Welcome to ObjectStar

ObjectStar gives IS the most reasonable tool to meet the most unreasonable demands. ObjectStar supports MVS, HP-UX, IBM AIX, Sun Solaris, Windows, and Windows NT.

NOW EVERYONE CAN HAVE OLAP ON THEIR DESKTOP.

INTRODUCING

BUSINESSOBJECTS 4.0.

The World's First
Integrated Query,
Reporting, and
Online Analytical
Processing Tool.

With BUSINESSOBJECTS 4.0, everyone in your enterprise has the tool they need to make better decisions.

Integration is key to BUSINESSOBJECTS 4.0. From a report, simply select drill mode to begin surfing the corporate database. Instantly switch from database query to analysis to reporting and back again.

Dynamically change the structure of your data as your analysis progresses. And analyze data online from any leading relational or personal database. All from within a single easy to use tool.

There's no need for multiple tools, no data transformation utilities, no static data structures, and no manual refresh of stale data. In short, BUSINESSOBJECTS 4.0

Management to blame for Duke Power project failure

Your article on the failed Duke Power object project ("Utility unplugs object project," CW, Feb. 26) is another example of technology getting the blame for what is clearly a management failure.

You raise two disturbing questions about this "failure." First, why would Duke Power or Oracle expect to deliver an object-based system in one big "bang"? This approach is the very antithesis of the power and flexibility of developing a new system with objects in an incremental fashion.

Second, why would anyone expect a consulting firm with a core competency in relational database technology to successfully deliver a massive new customer information system built with a technology they know very little about?

Brad Murphy

President
ObjectIntelligence
Raleigh, N.C.

Elimination of jobs is nothing to be proud of

The article about Northrop Grumman's Jim McCann and his IS savings ("Target: reduce computing expenses," CW, Feb. 12) was amazing. In the process of eliminating \$35 million more in expenses than management asked for, the company eliminated 140 jobs. Northrop Grumman plans to hire college graduates and more contract labor due to the lack of supply of network and systems administrators.

Call me old-fashioned, but I don't think I would be proud of the fact that I eliminated 140 jobs. Pride is when you can say that you kept and retrained existing employees rather than laying them off and hiring others. Even with inflation, \$35 million buys a lot of training.

Tommy Hall
Cypress, Texas
thall@cris.com

Bleak forecast

Unfortunately, I agree nearly 100% with Patricia Seybold's excellent article in the March 4 *Computerworld* ("The sorry state of systems management"). I have been a system/network administrator at my company for 13 years, supporting engineering applications and networks and trying to coordinate with MIS and other support groups. I have a global "view" of our network through HP's OpenView platform, but we have no coordinated global system. We even have isolated help desks and parallel support.

I hope Seybold's forecast of more Microsoft influence is not completely correct, as it has been my experience that Microsoft tends to be more difficult to integrate than other vendors and systems. An excellent but unfortunately bleak article.

Dick Heyman
Fort Collins, Colo.
Dick.Heyman@symbios.com

Readers debate on-line limits

► Although I am against censorship, there is a certain level of responsibility that comes with freedom of speech that, as you mentioned, may be better handled by a central authority. I think that if I were 15 to 20 years younger, single and didn't have two small children, my perspective on this might be a lot different.

As it is, I have helped bring life into this world, and I still consider it my responsibility to protect those lives from negative situations (physical and electronic) until they are ready to handle them. In this case, I don't mind the government helping me out with this task.

*Jim Kentilis
Houston
jmk@silicon2.ssn.com*

► Paul Gillin, your argument is ridiculous with absurd logic ("Defending limits," CW, Feb. 26). You say you can't watch what your children are doing while they're on-line, so the government should regulate what adult users have access to. Why don't you use a service like AOL that has parental controls available?

You argue that service providers should verify the identity of their users to take the initiative back from the government. The providers do offer parental controls, but it would be impossible for them to identify users, short of running a finger print scan. It's up to you, as a parent, to take responsibility for your child's use of the 'net.'

You also state that few people argue against laws restricting minors from buying skin magazines at the 7-Eleven. The laws restrict minors, but they do not prohibit the sale of those magazines completely. That is in effect what the indecency provision would do.

Finally, you say that telecom reform may be the only way to stave off a backlash from parents. What exactly might this backlash entail? Parents who decide that their kids should read a book or get some exercise?

*Jason Dredick
Solana Beach, Calif.
JDEDRICK@uct.edu*

► I agree that kids should not be exposed to predatory adults. Nor should they experience unguided, adult sexual fantasy. But limiting the Internet to *Barney* on the chance that a child may see something he cannot understand is unacceptable.

You might as well ban all automobiles on the chance that somewhere a

child might play in the road.

There are those of us who believe that Congress, by passing the Telecom Reform Act, has a hidden agenda not to protect children, but to ban all material that its members deem questionable or against their values. As an adult member of a free society, I want the limits on my permitted discourse to be as broad as possible. I'm disappointed that you, an editor, would support any form of censorship.

*Steven Long
Felton, Del.
slong@dpd11.k12.state.de.us*

► First, I haven't heard anyone argue that the restrictions imposed by the Communications Decency Act are too harsh. They are too broad. The CDA specifically bans indecency, and while it's true that obscenity is whatever the courts decide it is, indecency is a much wider net and tends to collect items like *Ulysses*, *The Tropic of Cancer* and a whole school of Shakespeare.

paled at the idea of a third party controlling their on-line desires.

You point out that the industry is far too concerned with growth to consider self-regulation. Is it not the responsibility of governments to provide regulatory frameworks in such cases? If people happen not to like the regulations, perhaps they should get more involved in the political process and try to elect those who support their views rather than whining.

But, come to think of it, I've yet to hear too many of the free access types complaining about attempts to minimize the spread of viruses, worms, etc., over the Internet.

Perhaps it's only some forms of regulation and censorship that are objectionable?

*George Nezlek
Loyola University Chicago
Chicago
GNEZLEK@epo.it.luc.edu*

► Marc Rotenberg ("Internet privacy: How far should federal regulation go?" CW, Feb. 19) seems to have never read the regulations published in his local phone book.

They clearly describe a broad range of words and concepts he cannot express over the phone. Likewise, bookstore owners and newsstand operators risk fines and jail sentences if they carry certain types of books and magazines.

*Jon Peakins
Adiant Corp.
Ardrossan, Alberta
71231.3003@compuserve.com*

► I am pleased to find someone in the media who is not horrified that we can place limits on what we receive.

While we all have the right to freedom of speech, we also have the right to freedom of selection. If I do not want to get *Computerworld*, I will not accept it. Does this imply a breach of the First Amendment? No, it implies that I am using my freedom to choose what I want to see.

Therefore, the legislation and controls over the Internet are important until we have the ability to stop information that we do not want to see from coming into our homes.

Think of the kind of person whom you dislike the most. Would you want to be forced to listen/view/see that kind of stuff? Privacy issues need to be addressed as well as the First Amendment.

*Arn Kratzer
Santa Clara, Calif.
arn.kratzer@casemaker.com*

MESSAGING. GROUPWARE. THE INTERNET. THREE CHALLENGES, ONE WINNER.

Today, information technology managers are faced with three distinct challenges.

Messaging.

Groupware. And the Internet.

To compete, your employees are demanding all of them. And you're searching everywhere for the most effective (and cost-effective) way to bring all three to your business.

Intranets are hot. Lotus Notes® helps you to take full advantage of them with advanced authoring tools for document creation and updating, and proven technologies for managing, tracking and securing information. That's why over 8,000 companies worldwide

The power of people working together.

New Products

VideoLabs, Inc. has introduced FlexCam, an integrated color camera and microphone designed for desktop video and communications.

► **VideoLabs'** videoconferencing Flexcam

According to the Minneapolis company, the camera and microphone are mounted on an 18-in. flexible, adjustable cord and include industry-standard, line-level audio.

Flexcam works with Apple Computer, Inc.'s AV Macintosh computers, all video digitizing boards for Macintosh and Microsoft Corp.'s Video for Windows. It costs \$395.

VideoLabs
Minneapolis
(612) 988-0055
<http://www.flexcam.com>

► **MicroTouch's** TouchPen monitor

MicroTouch Systems, Inc. has introduced the TouchPen monitor family of CRT displays.

According to the Methuen, Mass., company, the TouchPen monitors combine integrated touch screen and pen input with high-resolution 15- and 17-in. Diamond Scan CRT displays from Mitsubishi Electric Corp.

The TouchPen monitors were designed to handle applications that incorporate document annotation, image manipulation, signature capture and handwriting recognition.

Pricing for the 15-in. monitor starts at \$1,595. Pricing for the 17-in. monitor starts at \$2,125.

Pentium Pro servers near launch

By Bob Francis

There's good news for companies that are implementing high-powered application servers: New systems powered by Pentium Pro processors are arriving with attractive price stickers.

The systems were designed as high-end application servers that run Windows NT applications, analysts said.

Their pricing looks aggressive, based on companies that have already announced them, said John Dunkle, president of Workgroup Strategic Services, Inc., a consulting group in Portsmouth, N.H.

"Price is a moving target. It could get pretty brutal out there," he said.

Sales of symmetrical multiprocessing (SMP) boxes grew rapidly last year, and users said they would look at coming SMP-capable systems. "We'll be examining these new systems to see how they fit into our plans to deploy Windows NT servers," said Bert Loveland, an information systems consultant at Northern States Power Co. in Minneapolis.

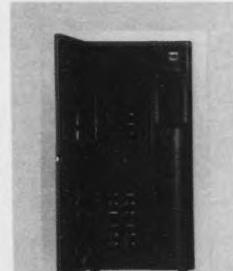

A newly aggressive IBM PC Co. unveiled its offering at CeBit in Hannover, Germany. The PC Co. announced a four-way SMP system based on Intel Corp.'s 166-MHz Pentium Pro. Prices will

start at \$18,995, and the machines will ship in May.

The following systems also were announced:

- Advanced Logic Research, Inc. in Irvine, Calif., will ship Revout Quad6 next month. Prices will start at \$14,995.

- NEC Technologies, Inc. in Box-

New Pentium Pro servers from IBM, NEC and ALR (pictured)

Processor: One to four 166-MHz Pentium Pros
RAM: 64M bytes, expandable to at least 1G-byte error checking and correcting RAM
Slots: At least eight expansion slots
Drive bays: 10 or more
Starting price: \$14,995

boro, Mass., will ship the Pro-Serva SH line in the second quarter. Prices will be announced later.

- Hewlett-Packard Co. and Compaq Computer Corp. next month will offer Pentium Pro servers, sources said. The Compaq system will include scalability from one to four 166-MHz Pentium Pro processors, hot-swappable 2G-byte Fast and Wide SCSI disk drives, built-in 10/100M byte Ethernet connections, and a Peripheral Component Interconnect architecture integrated with Compaq's TriFlex system. HP will release a similar model at about the same time. Compaq and HP officials wouldn't comment on unannounced products.

The competition has lowered the expected costs of Pentium Pro servers. When Intel announced the Pentium Pro and the surrounding server chip set, most vendors expected systems to initially be priced above \$20,000. Improved chip yields and lower memory and disk drive prices also have helped lower costs.

But not every company is rushing into the Pentium Pro server battle. Dell Computer Corp. in Austin, Texas, and AST Research, Inc. in Irvine, Calif., plan to wait until later in the year. Dell officials said the firm, which hasn't succeeded in the server market so far, is changing its distribution model to better handle servers.

Cheap, NT-based mirroring released

By Jaikumar Vijayan

A new Windows NT-based mirroring product increases PC server fault tolerance.

Vinca Corp.'s StandbyServer NT software lets network administrators mirror data from a primary NT server to a standby system via an industry-standard Peripheral Component Interconnect (PCI) link.

If the main server fails or is shut down, the software automatically switches operations from the

main to the secondary server, from which users can access the mirrored data in less than a minute. The software will ship in April and will cost \$2,999, Vinca officials said.

StandbyServer NT provides increased fault tolerance for PC server owners who are unable or unwilling to pay for the considerably more expensive but more robust fault tolerance provided by technologies such as Novell, Inc.'s System Fault Tolerance (SFT) III, analysts said.

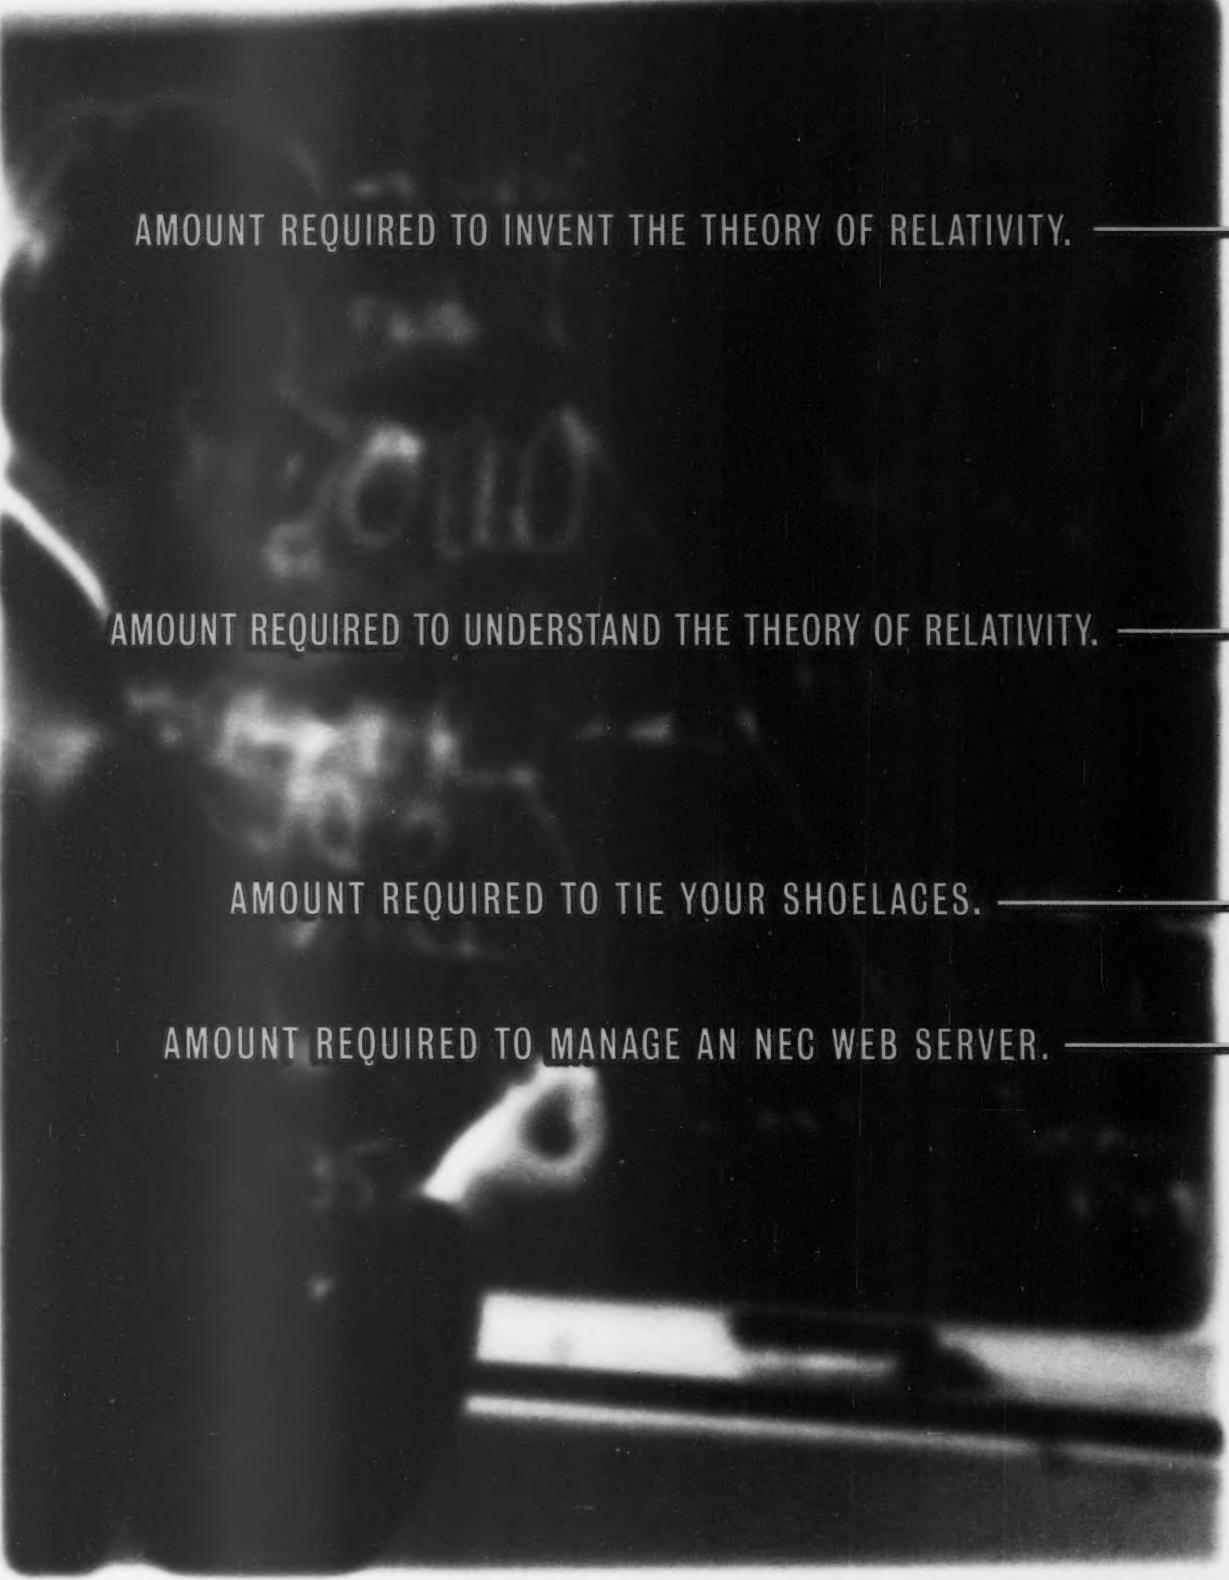

Mirroring

SFT III mirrors server memory and disk storage. It can also continually monitor secondary and primary server performance, which allows completely transparent switchovers in case of a server failure.

Typically, these features make SFT III about two to five times more expensive than Vinca's product, according to analysts.

Nevertheless, industry watchers said, Vinca's wares are sought after. StandbyServer is "a good product. A lot of users we talk

Vinca, page 49

AMOUNT REQUIRED TO INVENT THE THEORY OF RELATIVITY.

AMOUNT REQUIRED TO UNDERSTAND THE THEORY OF RELATIVITY.

AMOUNT REQUIRED TO TIE YOUR SHOELACES.

AMOUNT REQUIRED TO MANAGE AN NEC WEB SERVER.

Now, managing a web server couldn't be easier. No more encryption codes. No more special configuration parameters. All you need is an NEC RISCserver™. After all, it takes fewer commands to set up than a UNIX®-based system and it doesn't require any special programming skills. Just type in your IP address and you're ready to go.

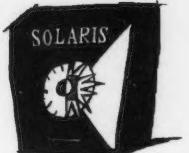

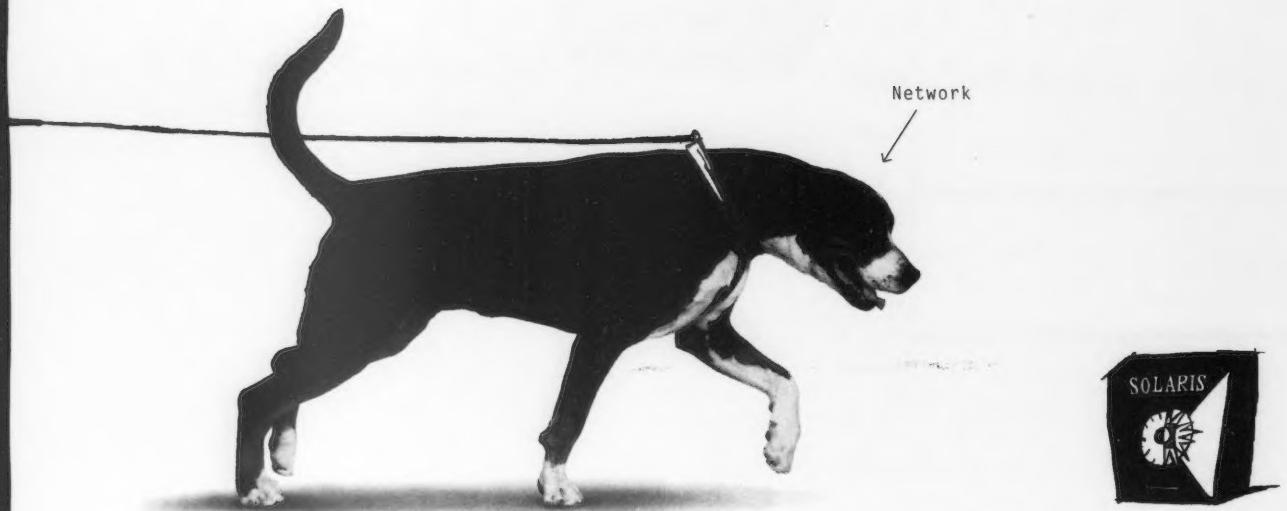

What's more, you'll get top-of-the-line performance at bottom-line prices. In fact, our RISCservers offer all of the power of a UNIX-based system, but at a fraction of the cost. To learn more just call 1-800-709-3434 or reach us on the Internet at <http://www.nec.com>. After that, your decision should be pretty much a no-brainer.

SEE, HEAR AND FEEL THE DIFFERENCE.™

NEC

You've maxed out NetWare.
You need something better than Windows NT.
Network has the answer.

And so do the analysts at D.H. Brown. In a recent study, they ranked Solaris™ as the best enterprise network operating system*. Ahead of Windows NT. And above NetWare™. Then again, why wouldn't they? After all, Solaris provides serious power you can add to your PC workgroups. While protecting your NetWare and Microsoft Windows investments. And because the Solaris operating environment is optimized for Pentium® and Pentium® Pro servers, your PC users will have access to information throughout the company faster than ever before. From almost any 32-bit database you're running. It even helps manage your multiple LANs from any single location, and lets you put all your workgroups on the Internet. Easily and securely. To get the study that shows why Solaris is so highly thought of, call us at 1-800-SUNSOFT, prompt #1. For more information see us at <http://www.sun.com/solaris/>. The solution is well within reach.

 **SunSoft**
THE NETWORK IS THE COMPUTER™

Vinca

CONTINUED FROM PAGE 45

with are asking for the kind of fault tolerance that Vinca is offering," said Bob Saka-keeny, an analyst at Aberdeen Group, Inc. in Boston.

Vinca's software works with any standard Intel Corp.-based PC server. It is different from SFT III because the primary and secondary server don't have to be identi-

Vinca, an Orem, Utah, supplier of storage networking products, ships similar versions of the product for Novell's NetWare and IBM's OS/2 environments. Allied-Signal Automotive and Energy Venture, Inc. are among Vinca's customers.

Users of Vinca's earlier NetWare and OS/2 versions of StandbyServer said the product has helped them. "We've used it for some time now, and it's been great," said Alan Walker, network coordinator at

the Institute of Real Estate Management in Chicago. The institute has had times when the primary server failed, and the secondary automatically took over before the failure was detected.

The institute chose Vinca's StandbyServer for NetWare instead of SFT III because of the lower cost and because some of its applications weren't compatible with SFT III, Walker said.

"It's not an endorsement of the company,

but it has been a pretty useful product for us" because it provides 24-hour data backup facilities, said Kumar Punjabi, project manager of networks at Circus Circus Enterprises, Inc. in Las Vegas, which uses an earlier Vinca backup product.

The Moody Blues

Vinca StandbyServer

What it is: Real-time server mirroring software

What it does: Increases fault tolerance

Other platforms supported: OS/2 Warp and Novell NetWare

Price: \$2,999

tical. But the Vinca setup requires the free disk space on the secondary server to be large enough to mirror the primary server's disk space.

Users load the software on the main and backup servers and use industry-standard PCI cards and cabling to hook them to each other. Users need to buy their own adapter cards and the cabling that physically links the two servers.

AIG plunges in

Insurer takes three-tier step with Sybase contract

By Dan Richman

The largest insurance company in the U.S. hopes a multimillion-dollar contract it signed earlier this month with Sybase, Inc. will lay a client/server foundation to help it maintain its competitive lead.

American International Group, Inc. (AIG) in New York has agreed to license Sybase's full range of products and services. The contract is worth between \$2 million and \$9 million, industry watchers said. Neither Sybase nor AIG would reveal the contract's size.

AIG is installing a new three-tiered architecture, compliant with the Distributed Computing Environment (DCE), domestically and in 100 locations worldwide.

DCE is a set of industry specifications for interoperability. Three-tiered architecture refers to a desktop client, an application server where the logic resides and a database from which the application draws data.

"It is a big deal for our company in terms of moving to more powerful computers, making important information available to more people and doing data mining" that can show trends and indicate where additional business might lie, said Mark Popolano, an AIG vice president.

Competition is key

With some 32,000 employees in 130 countries, AIG feels enormous pressure from competitors within the industry, and its executives see the technology in this contract as critical to remaining competitive.

"The insurance industry is basically playing catch-up technologically," Dean Witter Reynolds analyst Michael Lewis said. But those companies that catch up fastest will have an edge.

Insurance companies are finding that "mainframe applications can't be changed

American International Group's CIO Jeff Stoll
says he hopes the insurer's new client/server direction will help it remain No. 1

fast enough to let them get new products out the door within the 12 to 18 months that new products usually live," said Robert Fronk, vice president of technology at Symmetrix, Inc., a developer in Lexington, Mass., that specializes in insurance. "There's a lot of pressure to speed up development, access to data — anything that makes better use of time and helps distinguish one competitor from another."

Right now, like many insurance companies, AIG does most of its computing on IBM-compatible mainframes that run DB2 database software. Client/server computing isn't popular in the insurance industry except in limited roles, such as tracking investments.

AIG isn't considering moving away from mainframes for its transaction processing. But it does want to get away from users' dependence on information systems personnel for reports on premiums collected in the last

AIG, page 57

Briefs

OLAP meets reporting tool

Business Objects, a query and reporting tool from **Business Objects, Inc.**, by the end of the year will gain the ability to access data within Essbase, an on-line analytical processing (OLAP) server from Arbor Software, Inc. Access will be achieved through a driver that may sell

for \$195 per user, though final pricing hasn't been determined.

Sinper changes its name

Sinper Corp., in Warren, N.J., is now **TM1 Software, Inc.** The company also will announce Version 6.0 of its TM1 Server, which it said performs OLAP 100 times faster than earlier versions. It will ship by July 1 for Windows NT, Solaris, HP-UX and AIX, starting at \$7,000.

IBM aims Notes at legacy users

Software to be gateway to large systems

By Tim Ouellette

IBM forked over \$3.5 billion last summer to buy Lotus Development Corp., mainly to get its hands on Notes and rule a segment of the desktop market. But plans for the groupware are actually broader in scope: IBM intends to make Notes the desktop PC user's gateway to the company's extensive large systems family.

In fact, IBM hopes to diminish the importance of PC operating systems and lessen Microsoft Corp.'s dominance by using Notes as a key middleware component, according to a report by D. H. Andrews Group in Cheshire, Conn.

Notes now has ties to a number of IBM's traditional back-end data storage, processing and transaction systems (see chart). And IBM has made a Notes server an important component of its Project Eagle suite, which the company will announce this week (see related story, page 14).

"Notes organizes and structures and coordinates unstructured data," said Gary Alpert, a senior strategist at IBM. But users still need to access reams of structured data managed by IBM's legacy systems, he added.

Notes-tying

And Notes should pave the way toward tying together those various legacy systems, said analyst Matt Cain at Meta Group, Inc. in Stamford, Conn. Making Notes the desktop interface will breathe new life into such systems and help IBM get Notes into sites with existing IBM equipment.

For example, the CICS Gateway for Lotus Notes allows a Notes server to communicate directly with CICS transaction systems, providing one-stop access to Notes as well as legacy data. And the MQSeries Link for Lotus Notes allows Notes applications to communicate indirectly with CICS and other back-end applications via the MQSeries' message

transport software.

"In order to provide a complete process, the Notes process also has to go to a CICS application," said Ron Berry, a technical risk analyst at Barnett Banks, Inc. in Jacksonville, Fla. "Our strategy for Notes was at first to use the collaborative database groupware concept. But now users see Notes as a data-entry system into our consumer loans products, for example."

And one hospital has seen the combination of Notes with legacy systems improve its financial situation. The Niagara Falls Memori-

The ties that bind

Lotus Notes will be connected with these IBM large systems:

- MQSeries Middleware
- CICS transaction processing monitor
- ImagePlus imaging software
- Flowmark 2.2 workflow software
- A native version of Notes on the AS/400 due in 1997
- A Notes server will be bundled as part of the Project Eagle suite of server applications

al Medical Center in New York is using Notes and MQSeries to automatically download billing information to its mainframe, said Dick Witkowski, director of information systems. He said the hospital expects this year to decrease support staff costs by \$180,000 and increase revenue by \$138,000.

IBM's first stab at incorporating Notes as part of a middleware suite will come this week with Project Eagle, a suite of back-end application servers that lines up competitively against Microsoft Corp.'s BackOffice. In effect, Notes provides the desktop access to these other back-end applications.

Delphi 2.0 supports rapid development

By Howard Millman

Building high-performance, scalable applications for Microsoft's Windows 95 and Windows NT just became easier with Borland's object-oriented Delphi 2.0. This major upgrade to the year-old development system weds a high-performance compiler and an encyclopedic feature set to a scalable, multithreaded architecture.

Available in three versions, Delphi 2.0 fully supports Windows 95 controls, long file names and the Windows 95 application programming interface.

We tested Client/Server Suite, the most comprehensive of Borland's three versions. Used to design workgroup and departmental-class applications, Client/Server includes Intersolv, Inc.'s PVCS version-control manager, SQL tools and advanced application scaling utilities.

Borland has positioned the Developer edition to meet the needs of LAN-oriented developers. Desktop, the least costly version, builds complete applications but lacks the team-oriented and time-

saving tools offered in the other editions.

Borland has fortified the three versions with more than 100 drag-and-scale visual components and a speedy, 32-bit native-code compiler. The upgraded compiler provides more coherent error messages than its predecessor and catches errors all at once instead of one at a time.

Another feature contributing to rapid application development is Object Pascal's reuse of code. We saved random chunks of object-oriented code as Dynamic Link Libraries for reuse in other applications. Borland tuned its Object Pascal programming language to gain performance and added support for integer, strings and OLE, plus other variants.

Modular tools manage development

To build a test application, we chose components, or objects, from the dozens available on the multibitabled Component Palette. We stretched the components to size and dragged them to their location. Next, we modified each component's attributes with Delphi's Object Inspector, the property manager box that customizes every aspect of a component's behavior and appearance.

\$250

To key in new code or tweak existing source code, we used the Code Editor. We liked the editor's ability to display the entire application's code or just a selected range.

You can convert Delphi 1.0 source code into 32-bit code, as we did, using the Build command. One caveat: You will run into problems if the 16-bit Visual Basic controls have no OLE control equivalents. To assist developers migrating from 16-bit to 32-bit, all versions of Delphi 2.0 ship bundled with Delphi 1.0.

Other design aids include a Project Manager, which lists each form in an application. The Data-Pump Expert — available in the Developer and Client/Server versions — increases the capacity of the database to the limit set by the developer. Delphi's Object Repository stores forms and other objects that you can share among applications and with other developers.

Data Modules, a specific-purpose form available in all versions, likewise stores data, events and procedures. By separating data presentation, access and business logic from the form, Data Modules eliminate the need to place all table definitions on one form. This makes for a cleaner, less cluttered development environment.

Delphi's OLE Automation Server encapsulates data access procedures, making the procedures

available to any client application that uses an OLE Automation-compliant language. Supported standards include Open Database Connectivity, OLE controls, Remote Automation and Microsoft's forthcoming Network OLE.

with Version 1.0.

According to Borland, Version 2.0's executables also run significantly faster than the executables from Microsoft's Visual Basic. Compiled code, which is used by Delphi, generally runs faster than

Borland has positioned the Developer edition of its Delphi 2.0 Client/Server Suite to meet the needs of LAN-oriented developers

interpreted code, which is used by Visual Basic. Borland claims that Delphi executables run 15 to 50 times faster than executables built with Visual Basic's interpreted P-code. We weren't able to confirm or disprove this independently.

Millman operates Data System Services Group, a networking and problem-solving consultancy. He is based in Croton, N.Y., and can be reached at hmillm@mcmillmail.com.

Books about objects

♦ *The Object Technology Revolution*, by Michael Guttman and Jason Matthews, John Wiley & Sons, Inc., New York, 184 pages, \$24.95

This is a basic road map and a good thing to give anyone who needs to know why they need to know about object orientation. ("It will change the way you do business," the book's cover promises, along with other reasons.) Especially given what is usually considered pretty dry subject matter by anyone outside the computer industry, this book is a fun read. It puts object orientation into layman's terms, using things such as taxicabs to explain object classes. One of my favorite subheadings: "Bud-

dy, can you spare a paradigm?"

♦ *Reengineering Cobol with Objects: Step by Step to Sustainable Legacy Systems*, by Robert Levey, McGraw-Hill, Inc., New York, 257 pages, \$40

This seems like an indispensable guide for any large shop that wants to update its mainframe applications without having to redo everything all at once. The basic premise is that your old Cobol applications don't have to be an albatross that prevent delivering new services to your end users. Instead, the author says, updated Cobol systems can be the basis for the move to new technology and new services. After going through some prelimi-

nary info about Cobol and objects, the book delivers what it promises: a step-by-step guide on how to do this.

♦ *OLE Automation Programmer's Reference*, Microsoft Press, Redmond, Wash., 399 pages, \$24.95

This book tells you everything you might want to know about OLE Automation, which essentially is how you use OLE objects to create applications that have objects in their user interfaces or somewhere behind the

scenes. OLE Automation also lets you create tools, including macro languages and browsers, that access and manipulate objects. Among other things, the book defines standard OLE Automation objects, provides naming guidelines and shows how to create type libraries. It is recommended for professional programmers who already have some familiarity with objects or at least know the basics of object orientation and OLE.

♦ *Object Orientation, second edition*, by Setrag Khoshafian and Razmik Abousi, John Wiley & Sons, Inc., New York, 504 pages, \$34.95

This one is for serious object

geeks or those who want to become serious object geeks. The first chapter lays out, in fairly plain language, what object orientation is, what "inheritance" means and other basic concepts. Then things get decidedly more techie, with chapters devoted to abstract data types, inheritance, user interfaces, object-oriented methodologies including Booch and the Object Modeling Technique, and object-oriented languages including Smalltalk and Eiffel. There is a chapter on standards, including Common Object Request Broker Architecture and OLE. A handy appendix provides vendor names and other contact information.

You can leave network reliability to chance, or leave it to new... NetShelter™

Introducing NetShelter—a high quality, free-standing rack enclosure for storing all your network and power protection equipment. NetShelter saves floor space, eliminates cabling "rat's nests," and physically protects your equipment to keep your network running—all in an attractive, user friendly design. When integrated with APC's power protection, management, and environmental monitoring options, NetShelter provides a total solution for protecting your network environment.

DESIGNED FOR EASY SELECTION AND EASY INSTALLATION

NetShelter provides 73.5 vertical inches (42U) for industry-standard, 19-inch, rack-mount equipment as well as computer-grade ventilation to reduce heat build-up. There's no need to spend hours selecting from dozens of configurations. APC makes it easy, with a complete rack package right out of the box, requiring no cabinet assembly. The unit fits through standard office doors (unlike other racks...surprise!) and rolls into place on its integrated stabilizing feet and heavy duty casters. Back rails can be repositioned to various depths and cross members can be relocated for side-mounted equipment and convenient cable management.

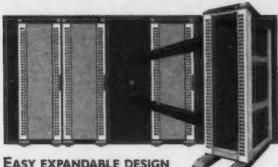

THE EASY ACCESS YOU WANT THE SECURITY YOU NEED

Access to the sides of the cabinet for equipment installation and service is provided in seconds by simply unlatching the locking side panels.

Moreover, locking handles in both the front and rear provide a tamper resistant environment. Optional switch kit combined with an APC Measure-UPS permits cabinet access monitoring for remote locations or during non-business hours.

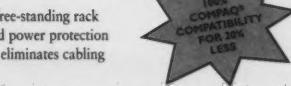

FULL COMPAQ® COMPATIBLE RACK FOR 20% LESS

Choose APC NetShelter for easy installation of Compaq's Rack-Mountable ProLiant® Server line, external disk storage and accessories with our optional mounting kit, at a total price much less than comparable premium enclosures. NetShelter's fully ventilated design exceeds Compaq's requirements for third-party racks.

EASY EXPANDABLE DESIGN FOR GROWING SYSTEMS

When your system needs exceed one cabinet, you can easily create a bay of connected NetShelters in minutes! Unlike other rack enclosures, NetShelter expansion requires minimal time, cost and parts. Simply connect your first NetShelter to our expansion model that includes preinstalled baying hardware and use the side panels from your original.

UPS power management and diagnostic features increase uptime, reduce staff costs

PowerChute plus offers unattended system Shutdown, extensive UPS testing/issue, Remote UPS management and Environmental/power monitoring so you can head off potential downtime. For SNMP-based WANs, APC's PowerNet provides comprehensive control from your network management console.

Share-UPS™ offers reliable shutdown for multiple servers even for different OSs

Provides a rack mountable solution for unattended safe shutdown of up to 8 servers (running the same or even different operating systems)—all from one UPS. Now you don't have to buy a separate UPS for each server in a mixed-OS environment.

Measure-UPS™ monitors NetShelter's environment even during power outages

APC's Measure-UPS prevents data or hardware damage by monitoring temperature, humidity, physical access and other external sensors. When alarm conditions occur, Measure-UPS along with APC software or hardware accessories can alert you and initiate a safe system shutdown. Moreover, network management nightmares like unauthorized access can be easily monitored with our Measure-UPS switch kit for NetShelter door openings.

ProtectNet™ data & network surge protection blocks "backdoor" surge damage, guaranteed to \$50,000

Multi-port rack-mountable modules (PNET4) protect your Ethernet and token ring network from lightning and surge events. Also available in telephone (PTEL-4). When used with an APC UPS to completely bulletproof your system, APC provides up to a \$50,000 repair/replace policy on protected equipment (see policy for details).

Smart-UPS RM rack-mount UPS provides performance power management for advanced networks

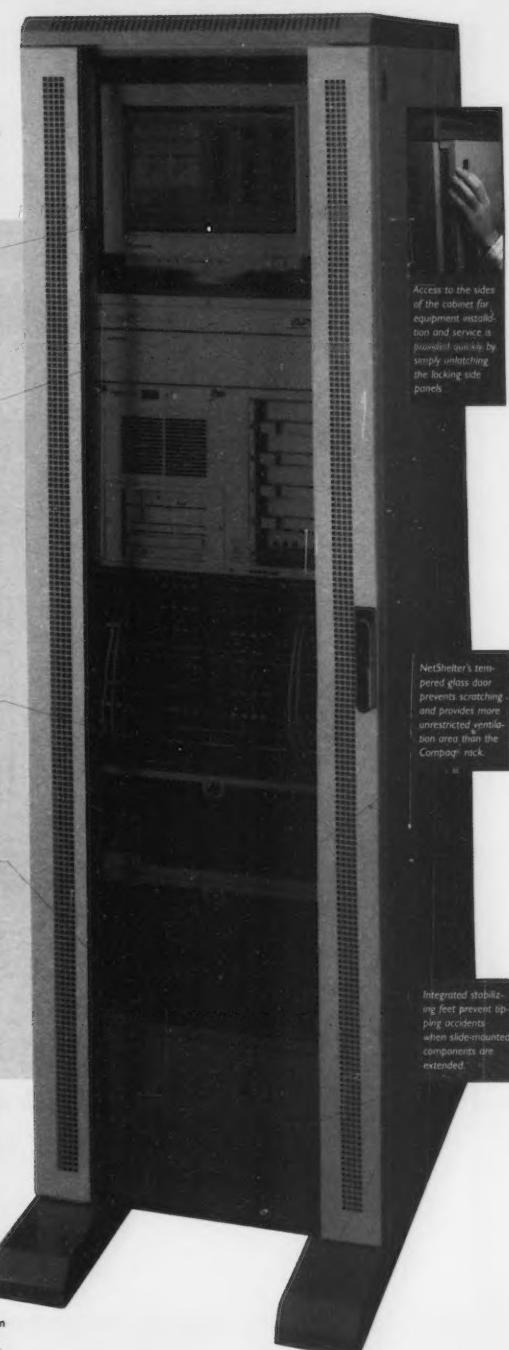

The ideal uninterruptible power supply (UPS) for rack mounted file servers, hubs, routers, telecommunication systems and other mission-critical equipment within NetShelter.

A few of Smart-UPS RM award winning features:

- SmartSlot™ accessories offer custom functionality.
- SmartBoost™ and SmartTrim™ correct under and overvoltages without battery drain.
- QuickSwap™ allows safe and easy replacement of batteries while the system stays up.
- 100% compatibility with Compaq® rack servers and Insight Manager.

APC
AMERICAN POWER CONVERSION

Yours FREE... SAS Institute's Applications Development Guide

If Your Business Is Data Rich, But Information Poor, Take a Look at Our Model for Informed Decision Making, FREE for a Limited Time!

So much data. So little information. That's the #1 complaint of today's business decision makers.

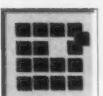

The reason is simple: most applications development activities center on capturing data, such as updating large databases while maintaining data integrity. But heavy-duty data input shouldn't be an end in itself.

At SAS Institute, we're helping thousands of companies expand their expectations beyond operational applications to encompass true enterprise-wide information delivery. By taking an iterative approach in building and deploying applications, we've created a new model for success in delivering decision support tools.

- Our exclusive MultiVendor Architecture™ makes the applications you build truly portable across all your hardware. Build them once, then take them anywhere with little or no modification.
- Split applications logic to exploit any client/server configuration. Each part of an application runs where it makes the most sense—everywhere from your mainframe and midrange computers to your desktop workstations and PCs.

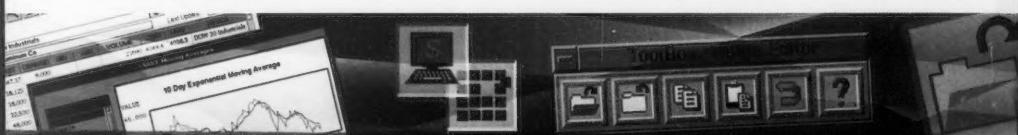

• Take advantage of a built-in object library that speeds up development time while empowering users to design their own applications.

Whatever your applications development needs, SAS Institute will show you how to meet them...faster and more economically. Start today by taking a look at our free applications development guide. For your copy, simply call our World Headquarters at 919.677.8200 or send us E-mail at cwsentry@sas.sas.com

Introduction

Development Challenges Getting Tougher

Today, the challenge for application developers is in distributed software, whether that be client/server, peer to peer or Internet applications. However daunting this challenge is, the challenges of tomorrow, which will include developing applications for distributed object environments, will be greater.

This White Paper will explore the state of the art in client/server development and distributed development. It will also advise readers how to select tools for a particular application development problem.

Many of the findings inside stem from a July 1995 survey of 835 application development managers from different industries in the U.S. These sites (by sites, we mean single contiguous locations) ranged from one to 35,000 employees, with a median of 150 employees. Enterprises, comprising multiple sites, averaged 580 employees and ranged to 300,000.

Of these 835 managers, 64% were currently developing client/server or distributed applications at their site. These managers currently employ many distributed application strate-

gies, a diversification policy that IDC believes will continue. Of sites with fewer than 100 employees (which this White Paper will refer to as small sites), only 36% have adopted new tools for client/server development. But that figure rises to 53% for the sites we will call "mid-sized" (those with 100 to 499 employees) and 78% for "large" sites (those with more than 500 employees). In other words, the propensity to purchase new development tools depends on one's overall development strategy, organization size and industry.

Businesses are increasing their development of distributed applications. Most of this increase will come from internal development. To maximize the results of that internal development, managers must consider many factors. Inside we will examine these factors so you can begin your planning process for the brave new world of application development.

Watch for the remainder of the Enterprise Software Directions Series:		
Data Warehousing	June	
Financial and HR Applications	September	
Systems and Network Management	December	

This White Paper was written by Tony Picardi, Group Vice President of Worldwide Software at International Data Corp., Framingham, MA. He has overall responsibility for all software, including packaged applications, application development tools and system-level software, and specializes in high-level development languages. Picardi holds an ScD in systems analysis from MIT and has 21 years of experience in systems consulting and product marketing at various software tool vendors. IDC is the IT industry's leading provider of market research and consulting services.

ILLUSTRATION BY ALAN WITSCHONKE

Selecting Tools For Distributed Computing

Distributed application strategies are in a state of flux. The number of sites relying primarily on 3GLs is declining. Single vendor integrated development environments (such as a DBMS with an integrated 4GL, CASE or object-oriented language) are on the rise, as are multiple development paradigms, such as those involving the use of both 3GLs and advanced tools (see Fig. 1).

By year-end, 65% of the 835 sites that IDC surveyed (see p. 3) will be developing applications internally. More than half of the sites doing internal development will have adopted new tools to help their programmers build client/server applications.

To select tools for an application development problem, there are four steps to follow. First, determine the magnitude of your development challenge. What are the scalability issues, in terms of both size and complexity? Second, appraise your development paradigm. (Omitting this step wastes time and has damaged careers.) Third, filter out the tools that are inappropriate in terms of organizational culture and scalability. Fourth, roll up your sleeves and try out the remaining tools . . . feature by feature.

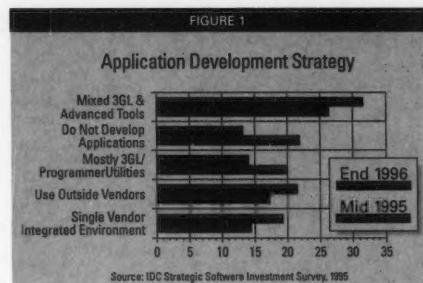

Development staffs grow, but the legacy remains

Development staffs are growing; 42% of the managers surveyed said their staffs will expand by an average of 15% in the next 12 months. Of this 42%, sites developing applications internally account for 78%, a figure that will reach 87% by year-end.

In any organization, developer resources are precious. How much time is devoted to application development? How is that time allocated between maintaining existing applications and creating new code? Such issues have a big impact on tool selection.

The sites surveyed averaged 38 employees per full-time IS employee. Of the IS employees, 29% did

only application development and maintenance programming, as opposed to other IS tasks such as database administration, help desk and LAN management. This programming staff was allocated 52.2% to maintaining existing applications, 21.8% to re-engineering those applications (including adding GUIs and migrating code to new platforms) and 26% to developing new applications, with little or no reuse of legacy applications.

In other words, a relatively small percentage of total IS staff works on new development, while up to 75% of them work with legacy applications. The requirement that developers do legacy maintenance and re-engineering precludes many practical IS managers from adopting new tools.

Challenge of distributed application development

Scalability of both size and complexity is a key criterion in choosing development tools for the new distributed applications. To get an idea of the current application scale and how it is changing, IDC asked developers about their distributed applications. How big and complex are client/server applications now? How do developers expect size and

ParcPlace-Digitalk Your Object Partner of Choice

Only ParcPlace-Digitalk offers you robust and mature choices for object-oriented programming, for the World Wide Web, Windows '95, and other major computing platforms.

Our expertise delivers the time-to-market advantage you need. We help breakdown the barriers to bringing your products and services to market. We help you develop the business-critical applications you need today and deploy them on your platforms of choice.

Since 1987, we have been training, consulting, and mentoring object-oriented developers in their quest to build better business applications. Over the past nine-year period, we have developed the largest collection of class libraries to help our customers get started quickly and move ahead faster. Our time-tested Smalltalk-based development tools run in all major computing environments.

ParcPlace-Digitalk delivers a time-to-market advantage:

- **VisualWave** is the fastest way to create, deliver, and change *live* Web applications, letting businesses move their business-critical applications onto the World Wide Web and listen and respond to customers.
- **VisualSmalltalk Enterprise** is the premiere component-based development environment for Windows '95, Windows NT, Windows for Workgroups, and OS/2.
- **VisualWorks** is the robust and mature development environment for developers who want to create applications and deploy them across major computing environments including Windows, Windows NT, OS/2, Macintosh, PowerMac, SunOS 4, Solaris 2, IBM RS/6000, HP, Digital Alpha NT and Digital UNIX.

ParcPlace-Digitalk Your Object Partner of Choice

ParcPlace-Digitalk offers a full range of training, consulting and technical support to give you the time-to-market advantage you need to better deliver products and services to your customers.

complexity to change by year-end?

According to respondents, the two most popular client/server applications are information access and transaction processing (OLTP). Office automation is a distant third, followed by event-driven workflow and realtime process control. (See Fig. 2.)

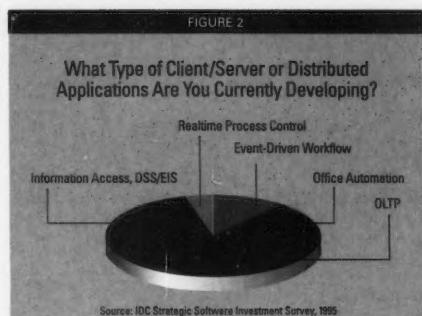

The intended number of users for client/server applications under development varies by site size. At small sites, applications average 232 users and will grow to 385 users by year-end, but half currently have fewer than 20 users. At large sites, applications start out serving 640 users and will grow to over 1,532 users by year-end, but half currently have fewer than 53 users.

Note the disparity between the average number of users but the high number of sites with just a few users. Most applications serve the workgroup, but a few move up the organizational hierarchy, i.e., are scaled up. This is why the issue of application scalability is so daunting. If your application is destined to scale up, the number of users of that application will likely increase geometrically. An application originally designed for 20 people may need to span to 10 times that number of users in a single bound.

Although only 25% of the sites have 500 employees or more (therefore having the larger applications), applications at these sites are expected to grow to four times the size of those at smaller sites.

Developers have similar expectations for their applications' transaction loads. Most applications in-

volve information access, implying little or no transaction load. But for OLTP-type applications, developers expect loads of 77,000 transactions per day. By 1997, that daily average will jump to 126,000. The average size of the application database is expected to be nearly one gigabyte.

By implication, size scalability is a function of number of networks, servers and server types. As the number of users grows, heterogeneity of the environment also increases. An application designed to work on one LAN has to cross one scalability bridge to work on multiple LANs, another for a WAN, another for multiple types of servers (i.e., different network operating systems) and a final huge bridge: using standards-based technology and protocols

Where Tools for the Internet Fit in the Development Picture

Scripting languages (such as Java, Sun's interpretive 3GL with a 3GL's built-in flexibility, and JavaScript, a scaled-down 4GL-like version that can add application, machine and/or platform-specific extensions to Java languages) generate interpreted code that will run on a variety of user interfaces once the application is downloaded.

Many developers of client/server OLTP applications who are using 4GLs or CASE tools would find it

more cost-effective to have their 4GL or CASE tool generate Java for Internet clients.

In the next 12 months, Java code generators will be released to more closely fit this group's development paradigm. It will take Internet-centric Visual 4GL or RAD tools to popularize Internet development, as PowerBuilder brought client/server to the early majority. While Java has immediate appeal for the 1 million or so C programmers, an Internet-cen-

tric 4GL and RAD tool would lure the millions of non-3GL programmers.

Internet tools for creating simple server-centric information access types of applications already exist. Development managers should look for the 1996 crop of Internet tools to be able to treat the Internet server as any other node in a heterogeneous application architecture and generating secure transactions as well as downloading parts of the application to run on the Internet client.

Special Advertising Supplement

(such as DCE) to be truly distributed. Many software architects solve these problems with middleware, but the development tools themselves are often the cause of failed scalability, either due to a lack of partnered (or embedded) middleware or subtle performance problems that only crop up when crossing the bridge from a simple world to a complex one.

The vast differences in size scale between applications affect the choice of development tools. A tool may be adequate for one business but inappropriate for another because the initial size scale is greater by multiples. Just as important, a tool chosen for the prototype may not be appropriate when loads increase by multiples in a short time.

Developers also face challenges in application complexity (IDC calls it complexity scalability). Distributed applications are complicated by multiple-vendor DBMSs, complex rules-based logic and event-driven logic, all of which require sophisticated programming. Tools chosen will depend on where one is on the complexity scale and whether the complexity stems from integrating data from multiple DBMSs or working with heterogeneous networks.

Development process integration is critical

Most IS managers require a wide variety of tools. But how do they get these tools to work together? In Fig. 3, 27% of IS managers want total integration of the entire development process, from requirements to application management; 23.5% want to standardize on a database and add only integrated tools, either from the DBMS supplier or third parties. Over half the respondents use one of these two strategies, indicating that for most developers, integration of the development process is a must.

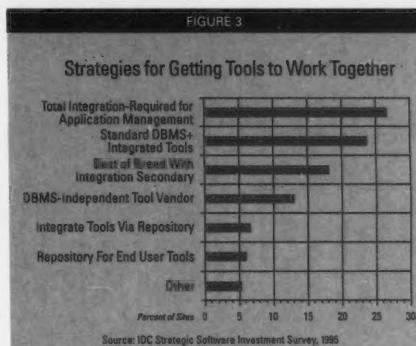

What kinds of tools are developers using? How is the use of tools changing? Fig. 4 shows the percentage of development staff using various languages in mid-1995 and the expected distribution of languages by year-end. Four conclusions can be drawn:

1) Cobol is still the most popular development tool and will remain so in the short term (due to the need to maintain and re-engineer existing Cobol applications). Cobol's decline has been accompanied by increased use of C and C++. Most programmers use the latter in a 3GL paradigm, even though newer tools offer higher productivity.

Vendors are giving developers the means to raise productivity while staying with the same paradigm. For example, Visual Object Cobol from Micro Focus and Microsoft Visual C++ can increase productivity for Cobol and C/C++ programmers, respectively. It remains to be seen if IBM and Micro Focus can stem the slow exodus from Cobol with their new OO Cobol and related class libraries and components.

2) The most growth is occurring in client-centric tools such as Visual Basic and 4GL RAD tools such as PowerBuilder and SQLWindows. This is consistent with the rapid increase in client/server development and also with the need to re-engineer existing applications via an added graphical front end.

3) Smalltalk and other object-oriented languages are used by the segment of the developer population we call visionaries. (This includes the tiny fraction of C++ users who have implemented a true object-oriented development framework and develop their own formal reusable class libraries.)

4) Use of both CASE and 4GLs is increasing (reflecting the need for integrating environments) but CASE is increasing proportionately faster than the classic 4GLs. IDC's interpretation is that CASE vendors are now simplifying the development process without high retraining costs (i.e., traditional CASE, which was shunned by most developers).

Development managers want total process integration, but no single tool can fulfill all the requirements for each step of the development process. To achieve their goal, integration-minded developers

PATROL puts out your fires

Bringing control to in-house applications

Organizations rely on in-house applications to address unique business challenges. But specialized applications require specialized administrative attention. Without it, performance and availability issues can flare out of control. Causing user patience and productivity to go up in smoke.

To change the scenario you need PATROL from BMC Software.

PATROL is the ONLY product of its kind that allows your organization to

quickly and easily extend proactive management capabilities to in-house applications. Automating administrative routines while freeing your IT staff to focus on other mission-critical issues.

PATROL also provides off-the-shelf management solutions for industry-leading applications, databases and underlying resources — more than ANY other product on the market.

Only PATROL puts it all together.

Unrivaled database management —

- CA-Ingres
- CA-OpenIngres
- DB2 for AIX
- DB2 for MVS^f
- DB2 for OS/2
- Informix
- Microsoft SQL Server
- ObjectStore
- Oracle
- Rdb
- Sybase
- With more in development.

must combine language tools and non-language or process management tools.

The most popular non-language tools used by developers to integrate their processes are software distribution, configuration and version management, project management and project planning (see Fig. 5). Component software and purchased class libraries will support object-oriented strategies.

Growth at this early stage, however, is mainly due to the purchase of components — visual objects — to support Visual Basic programmers.

The change in test tools shown in Fig. 5 is modest, but virtually all of it is in test tools for distributed applications, a category that barely existed two years ago but is now booming. Development managers are realizing that their investment in regression tests is a corporate asset. This realization drives the growth in the integrated testing "platforms" that offer traditional keystroke capture and playback or specification-based testing as well as test suite librarians and test process management software.

Only a fraction of developers currently use stand-alone repositories. The vast majority prefer their

repositories tightly integrated with their 4GL, CASE or object-oriented tool.

No one tool today can deliver a totally integrated development environment. Nor can any single tool deliver cost-effective development across the scalability spectrum. This paradox is that powerful tools that facilitate abstract and automated generation for complex environments are too costly (in terms of licenses and retraining) for simple tasks; easy-to-use tools do not deliver the scalability needed for the high ends of the size or complexity spectrums.

Match tool paradigm with organization

A development tool paradigm is the basic thought process used to create applications. How do YOU think? Do you conceptualize in granular sequential commands, or do you construct abstract business entities? Do you talk to users and prototype workflow processes, or do you create functional hierarchies with generalized operations? Talented developers may attribute much of their success to natural ability, but the truth is, it takes practice to become proficient at any paradigm.

Changing paradigms brings discontinuity to the development process, and discontinuities are expensive for any organization, for they necessitate considerable retraining. For example, if you are skilled at 3GL programming, it is much easier to adopt a new 3GL than to shift to a model-driven CASE paradigm. Making incremental changes in an existing paradigm is cost-effective; leaping from one paradigm to another is not . . . except when the application warrants it.

There are two kinds of costs of change: those of individual adoption and those of organizational adoption. Not only are costs higher when more people are involved in organization-wide paradigm shifts, so are the consequences of a mistake. It took vendors of development tools a generation to learn this: If the organization is not ready to invest in a paradigm shift, it will not adopt new tool technologies. And if it does adopt them, it will fail.

IDC has developed a taxonomy to classify some 200 tool vendors in 20 tool markets, based on what tools do, how they do it, how they are used, their abstraction level and breadth of functionality. It has little to do with application scale. For example, 3GLs

Business managers need software developed to support their business.

Software developers need to prototype, get the design right, and generate code.

VisualMagic™ meets their needs.

Finally, an executable OMT model that is your application!

The ability to deliver application software that supports business requirements often becomes a tug-of-war between Business Managers and Software Developers in communicating what *needs* to be done and what *can* be done. Now, VisualMagic enables *both groups to work together and get it done better*.

VisualMagic is an exciting *new* object-oriented software development tool that dramatically improves the application development process by extending the

Rumbaugh Object Modeling Technique to include system execution. As equivalent business *and* application development models are built, you are actually implementing the software. Running this implementation allows managers and application developers to cooperatively develop software that meets the needs of business. As system and business models are incrementally built, a functional implementation of the required software is generated by VisualMagic.

For more information about VisualMagic, call **1-800-522-4321, Ext. 1100**, or contact us on the Internet now at <http://www.visualmagic.com>.

can be used for almost any size application.

Tools for distributed development fall into five paradigms, each defined by a combination of functions, usage metaphors, lifetime productivity levels and price bands that together determine how cost-effective the paradigm will be for an organization. Paradigms have as much to do with individual and organizational adoption as with whether the tool can do the job. Costly tools that require more training may be more cost-effective than simpler tools that result in a longer development cycle and more lifetime maintenance resources. The paradigms are:

- Classic 3GLs
- Visual 3GLs
- Classic 4GLs
- Visual 4GLs
- Integrated CASE

The list contains no specific object-oriented paradigm, because object-oriented development is a methodology for using the tools. Many of the tools have specific features to aid developers in defining and reusing classes and objects.

In the survey, development managers were asked which tools they purchased for client/server pro-

grammers. Their responses were classified according to these five paradigms. Respondents chose tool paradigms in this order: Visual 4GL, Visual 3GL, Classic 3GL, Classic 4GL and CASE.

3GL paradigm: least cost to adopt

The 3GL paradigm still dominates development, although instead of just Cobol, several different 3GLs are often used. Since 1990, Cobol has lost share to C due to C's popularity for programming midrange Unix servers. Now both languages are losing share to C++ for this function, although Cobol is retained for legacy maintenance.

Use of visual 3GLs, led by Visual Basic and Visual C++, is soaring. Visual 3GLs offer easy-to-learn GUI builders and rich sets of pre-built components, and are easy to adopt since they are only an incremental change from traditional syntax-driven and command-oriented 3GLs. They are used for simple client/server development and as a cost-effective way to re-engineer legacy applications to client/server.

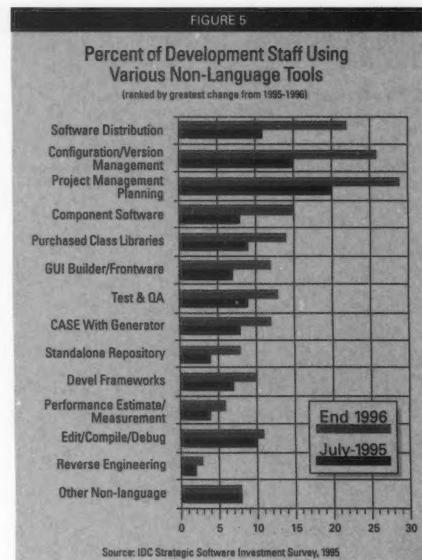

4GLs: practical solution for mid-range OLTP

Traditional 4GLs were designed for larger and more complex development tasks. But suppliers enhanced these products' integration with leading DBMSs, creating the DBMS/4GL hybrid powerhouses that now dominate the tool marketplace.

Adopting these integrated 4GLs was only an incremental step for organizations, many of which already had 15 years of experience with relational DBMSs and more with host-based 4GLs. To integrate a client/server 4GL with an RDBMS was a relatively small step but a compelling proposition.

Originally, this integration came from vendors of DBMS-independent 4GLs, who touted their ability to develop applications that interfaced to multiple vendors' DBMSs. DBMS vendors' core competencies were in the database engines themselves, not the tools. Before 1994, their tools lacked a true 4GL paradigm with robust report generators and metadata repositories. But major DBMS vendors, such as Oracle, Sybase, Informix and Progress, have since improved their tools to the point where these tools can compete on their own.

In single DBMS environments, these DBMS-centric tools are often the most cost-effective for OLTP.

ENTERPRISE SOFTWARE DIRECTIONS

White
Paper

Special Advertising Supplement

type applications. In multi-vendor DBMS environments, the cosmopolitan nature of the tools of the DBMS-independent vendors may provide an edge. Also, some DBMS-independent 4GLs offer more environment support for prototyping, complex logic support, decision support or transaction monitoring. One big concern: Business logic that is hard-

ASE may be about
to enjoy a rebirth as a
development paradigm.

coded into vendor-specific DBMS triggers and stored with the data schema is not transportable.

Most 4GLs have migrated to become visual 4GLs, meaning a developer can now create nearly an entire application by pointing and clicking on visual objects and icons. 4GL syntax is needed only for the more complex logic.

Integrated CASE: saved by complexity

CASE tools have languished for the past two years, because CASE has been organizationally hard to adopt. Vendors were late to generate code for the client part of client/server, and were slow to move CASE's server-based metadata repository off the mainframe and work out ways of managing the models, so teams could work effectively. The mainframe repository operating environment meant these tools carried a high price tag.

CASE vendors have addressed these issues. They now offer flexibility in usage metaphor: Users can do rapid prototyping, the tools generate a generous amount of "default code" and users are not confined to a strict methodology. Their tools have become more cost-effective due to more flexible and lower entry point pricing models, less learning time required due to greater usage flexibility, and functionality increases that truly offer platform-independent models for multi-tier distributed development.

Even though CASE tools still fall short in process tasks such as managing other tools' code and software distribution, they may be about to enjoy a rebirth as a development paradigm for the most complex distributed applications, for large-scale systems

involving mainframes and as a means of generating data schemas for visual 3GLs.

Object-oriented methodology: different flavors

Eventually, we are all going to end up using object-oriented (OO) development tools, although how much a developer will have to consciously follow an OO methodology will depend on the tool's level of abstraction. Some developers will deliberately adopt OO tools and formalize a process based on a specific object methodology; others will be seduced into working with objects and learn about the methodology through component-based tools.

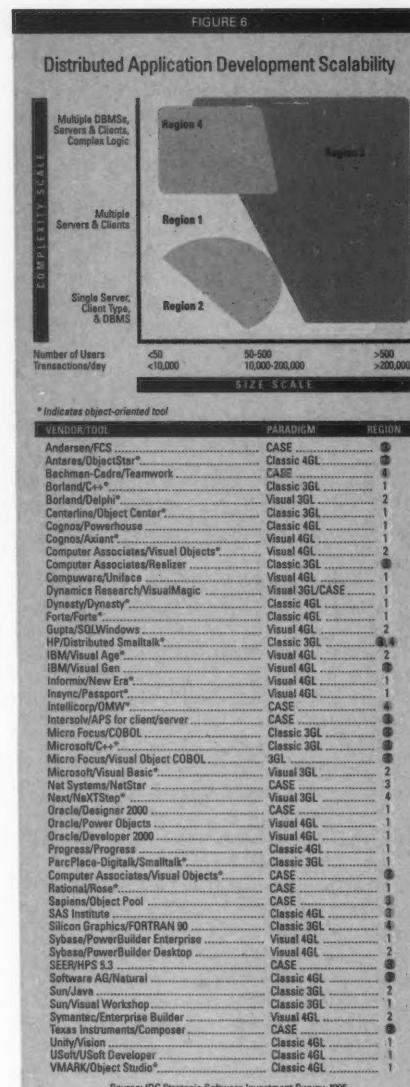

Effective use of object techniques demands a methodological focus as rigorous as any associated with CASE. This is because the productivity payoff comes with reuse of classes and associated methods. Reuse, however, requires that class designs be well thought out in a top-down manner, meaning an organization has to buy into the methodology as a whole. Developers are best relegated to complementary roles as class builders (using 3GL-like languages) or object assemblers (using higher-level graphical tools).

Object technologies have been widely adopted by software vendors, since it is in the survival manual of every vendor developer to be a visionary. But businesses, wary of making paradigm leaps, lag by at least three years.

Many tools, including visual 3GLs, visual 4GLs and CASE tools, claim to be object-based. However, true multilevel inheritance, polymorphism and encapsulation still elude object-based tools. Also, reusability of methods for large projects becomes impractical if there are no object librarians with the expertise to help one find appropriate objects and methods. Managing such object libraries to maximize reuse is still a challenge for object-oriented tools. Managing the distributed object environment is another challenge.

The pragmatist early majority will minimize their development risk by opting for an object-based tool as a transition tool, with the promise that the vendor will migrate the tool to true object orientation. This will suffice, as much of the other software needed to manage the distributed object environment is not yet in place. Object-based tools are a seductive way

Special Advertising Supplement

to begin learning the basics of the technology.

A final note: Certain types of applications cannot be created cost-effectively without the use of object tools. Examples include complex networked data models (the bill of materials and assembly methods for an airplane), complex event-driven logic, technical applications (CAD/CAE) and location-transparent processing. In the distributed world of today, these applications are becoming more in demand.

Rapid application development

Prior to the advent of graphical client interface builders, building GUIs was extremely difficult. But visual RAD tools allow both 3GL and 4GL programmers to point-and-click their way through a GUI easily enough to involve users in a prototyping activity. This RAD exercise usually reveals valuable design information about the application workflow and/or the business rules. Visual 3GLs have window toolkits that facilitate varying degrees of complexity in the interface design. The best ones render the target client platform transparent to developers and have their own objects to process inter- and intra-screen navigation, to access data in various server environments, and to interface to program logic either locally or on remote devices.

But with RAD tools, scalability issues surface. Multi-tier transactions are difficult to generate without actual programming, which often involves complex logic that accesses data across several platforms and could trigger concurrent processes on multiple computers. At enterprises, scalability requirements are extending to the use of the same application design to target multiple tiers of servers and to dynamically switch processing in realtime based on application runtime criteria controlled by external application monitors. With RAD tools, this is only possible by resorting to the underlying code, which is often very non-RAD-like.

Development tool scalability

During tool selection, IDC recommends that customers first find the tool paradigm that fits the company culture. After appraising the scalability attributes of the intended distributed applications, you are now ready for Phase II: to use size and complexity mapping to narrow your choice further.

Special Advertising Supplement

Fig. 6 includes both tool name and vendor name, since some vendors offer tools that support multiple scalability levels and apply to different paradigms. Tools are color-coded to indicate their paradigm and are placed on the scalability map to show where they are cost-effective. Any tool in the chart can be put in the other quadrants; the mapping is to position the "median" or mid-level cost-effective user.

The scalability map shows four regions, whose boundaries are defined by the overall centers of competence of present tools. Tools designed for simple applications for small numbers of users are in the lower left quadrant. Tools for the most complex applications for small to medium numbers of users are in the upper left. Tools for the largest scale with high complexity are in the upper right. Tools aimed at the "sweet spot" of the scalability spectrum, where most of the activity is in terms of numbers of sites and developers, are shown in the middle.

Chances are you will find more than one tool in the chart that matches either your current paradigm or the one you want to migrate to. Now the trial test begins. In such trials, the tools should be stretched in both directions to the fullest extent of the complexity and size scales relevant to you.

However, low-priced RAD tools are so inexpensive that serious trials are seldom undertaken. The decision instead revolves around the ease of use for building windows. Since many such tools are sold indirect, without the help of a field technician, it is up to the buyer to construct and conduct the trial. This effort usually costs more than the tool's price tag, often precluding a serious trial, especially to test size scalability. It may be that performance cannot be tested until application rollout. For risk-averse organizations, this is hardly a recipe for success.

On the way to objects

As you build distributed applications, your challenges will multiply. On the horizon is the formidable task of linking heterogeneous environments from different enterprises over a variety of intermittently connected communication networks, the Internet, Intranet and mobile users. To do this, you will need platform-independent applications that are distributed according to autonomous rules that define the criteria under which processing shifts

Look before you leap!

Here are some final suggestions to help you navigate the tools labyrinth:

- Development managers should choose tools that not only fit their present or intended paradigm but that also suit their application scalability requirements.
- Evaluate your development paradigm now and design a transition plan for getting to object technologies. Consider transition tools in your selection space as a means of minimizing the risk and cost of changing paradigms.
- Consider the lifetime cost of development tools. You are already burdened by a Herculean maintenance task. Invest only in tools that raise the level of abstraction at which the application is maintained.
- Applications will become larger and more complex. Be "realistic" in your scalability estimates.
- Use scalability estimates to test-trial tools, even low-cost ones. Your tool license costs are trivial compared to the costs of maintenance or starting the project all over again.

among resources to optimize resource use and availability. These applications will be built with objects and maintained by continually changing individual objects and redeploying them in realtime. All objects will be capable of relating to any number of applications. In the distributed object world, individual applications lose their meaning.

No one in your enterprise may currently be thinking of distributed object environments, so you may think you're off the hook for now, and that such a totally integrated paradigm will remain the province of visionaries for the foreseeable future. But as soon as a comparative business advantage can be demonstrated, your line-of-business managers will be asking how long it will take to implement a similar type of application. Soon after, software vendors will figure out how to minimize the risk and lower the cost of the paradigm shift. Tools will be offered. Now you are *on the hook*. The world of distributed objects will be here sooner than you think. ■

If you exclude

object technology is quite beneficial.

Add-on stamps Mail as groupware

Offers low-cost alternative to Exchange Server

By Tim Ouellette

Groupware features without the groupware headache.

That's what users of Microsoft Corp.'s Mail messaging software can get with Conference +2.0 from Mesa Group, Inc. The Mail add-on uses that product's electronic-mail infrastructure to provide group discussions, document sharing, distributed applications and electronic forms.

Conference +2.0 appears in the Microsoft Mail environment as a set of folders and menu items. Version 2.0 has added full-text searching throughout conference

databases, custom views and remote user support (see chart).

Without Conference +2.0, "if you want to extend Microsoft Mail with groupware features, you are sort of stuck. You have to wait for Exchange, then move over to Windows NT and do God knows what to your systems environment," said Geoffrey Bock, an analyst at Patricia Seybold Group in Boston.

Exchange Server is Microsoft's client/server messaging upgrade to Mail that promises to incorporate some groupware features. Observers said migrating to Exchange will require expensive infrastructure changes such as switching to Windows NT servers and upgrading desktop PCs. Some users who are happy with their Mail installation may not

want to fork over that money right now.

Pricing for Conference +2.0 ranges from \$25 to \$75 per user, depending on the number of seats.

Mesa not on a plateau

Conference +2.0 provides the following groupware features that run over users' existing Microsoft Mail network:

Discussion folders, document sharing and electronic forms

Custom conference folder views and subfolder groupings

MAPI 1.0 object store that supports OLE objects, controls and attachments

Support for Visual Basic, C++ and electronic forms applications

Bi-directional replication, so changes can be moved among discussion folders

long-distance telephone-service provider already had 1,700 Mail users, so Munos wrote a few applications in Microsoft's Visual Basic and C++ that would run with Conference +2.0 to provide the same features in Mail as in Notes.

Smoothing migrations

For the many Mail sites that eventually will migrate to Exchange, Conference +2.0 will help the two environments coexist, since the software also runs with the Exchange client. Munos said LCI plans to do that by switching to NT Server and moving to Exchange in the next year.

Newton, Mass.-based Mesa also sells software to link Notes databases and Internet newsgroups with Conference +2.0 folders.

Forms automation sees future on 'net

By Stewart Deck

Bank of Boston's chief financial officer was tired of signing travel vouchers. Day after day, another stack of papers landed on his desk requiring his signature. Finally, enough was enough.

"He passed a mandate saying that he didn't want to see another paper voucher," said Bob Nowak, director of systems integration at

The latest release of JetForm Filler, which starts at \$80, includes support for Netscape Communications Corp.'s Client Plug-in application programming interface. This lets users view, edit, save and route forms from within Netscape Navigator. Users can send data from the forms to a World Wide Web collection site for processing and analysis.

In Bank of Boston's case, travelers fill out their travel vouchers on-line and send their receipts with a tracer number to the accounting department. The electronic voucher is sent via electronic mail to a manager, who approves it and sends the voucher to the accounting department to be matched with the receipts.

Nowak said it takes a week to complete the process, three weeks less than the bank's paper-based systems.

The process is also linked to the company's database of travel-related information to discover useful company travel trends.

"This kind of forms automation software is going to play a critical role in enabling commerce over the Internet," said Gerry Murray, an analyst at International Data Corp. in Framingham, Mass. "This technology allows transactions to take place much faster and at a much lower cost to catalog providers," he said.

For example, an electronic order form can go to processing, billing and inventory all at once.

Form-fitting

Bank of Boston estimates it will save each year 77,000 sheets of paper, equivalent to 14 miles of pages. Other benefits of electronic forms include the following:

Elimination of redundant data entry

Automatic calculations

Quick forms turnaround

No revaluation of data required

Saved trees

Bank of Boston. "We have a total of about 77,000 [travel and entertainment] forms a year, and we had to put in place a system that automates the whole travel and reimbursement forms process."

Bank of Boston turned to JetForm Corp. in Falls Church, Va. The company's Filler 4.2 software lets users access the most up-to-date forms from Internet and intranet servers.

POEMS: Ode to open systems

Platinum's framework unifies systems management tools

By Bob Francis

Platinum Technology, Inc. is sending its open systems users a framework to link its products under one systems management umbrella.

The Platinum Open Enterprise Management System (POEMS) will offer a distributed management system for Platinum's database development, database administration and systems management tools.

The POEMS Enterprise Console, now in beta testing, lets users manage all these kinds of tools from one console.

Platinum, in Oakbrook Terrace, Ill., later this year will offer integrated security services and event-management software, which monitors system events

and automates message traffic, as part of POEMS. Other software, such as performance management, software distribution, job management, problem resolution, storage management and enterprise automation, will arrive piecemeal after that, company officials said.

Buying binge

Platinum has "been on an acquisition binge, and this tells customers that they're going to tie these pieces together," said Paul Mason, an analyst at International Data Corp. in Framingham, Mass.

POEMS won't change any of Platinum's tools but will superimpose object repository, file transfer and event-trigger messaging technologies on top of the applications, company officials said.

Platinum's addition of a console framework puts the company in closer competition with other open systems management tools such as Computer Associates International, Inc.'s CA-Unicenter and Tivoli Systems, Inc.'s TME Framework.

Platinum's acquisition binge shows no signs of slowing down.

Earlier this year, the company purchased Prodea Software Corp. in Eden Prairie, Minn., which makes on-line transaction processing tools. Another recent Platinum conquest was Advanced Systems Technologies, Inc./Distributed Computing Group in Boulder, Colo., and its client/server transaction management software. Those two acquisitions are Platinum's 26th and 27th in the past three years.

AIG signs with Sybase in bid to stay ahead

CONTINUED FROM PAGE 51

week, policies quoted but not yet committed to and other mainframe-based information that bears directly on the bottom line.

With the new system, end users — from company presidents to underwriters — will be able to get "whatever information they want, right away, themselves," said Jeff Stoll, senior vice president at AIG Data Center, Inc.

AIG is looking to Powersoft

Corp.'s PowerBuilder and tools from Cognos Corp. to cut application development time. "That means users get their needs met sooner," Stoll said. In turn, they can put new products on the market faster.

Sybase's SQL Server relational database management system will be used to create data warehouses, into which mainframe data periodically will be copied. User queries will run against SQL Server databases from Win-

dows applications.

Poplano and Stoll say the contract was awarded to Sybase — competitors reportedly included Oracle Corp. — as much on the basis of business philosophy as technology prowess.

"Vendors play leapfrog with technology, but openness to new ideas, corporate culture, vision and approach to doing business are more fixed, and we felt Sybase's were more in tune with ours," Stoll said.

Today, you're faced with an overwhelming number of options for getting your networking infrastructure off the ground. The question becomes: How do you know which partner is best at building an evolving architecture? An architecture designed to continually enhance and extend your network as your business grows?

**YOUR NETWORK WILL NEVER GO
ANYWHERE IF YOUR ARCHITECTURE
IS HOLDING IT BACK.**

Anixter. Nobody knows networking like we do. Especially when it comes to partnering with 3Com. Their high performance scalable networking architecture, combined with Anixter's expertise, lets you build a reliable and easy-to-maintain network. To get your organization up and running, you need a company that will help you soar.

The Enterprise Network

ATM users seek integrated management

Cabletron, Fore Systems improve Spectrum, ForeView links

By Patrick Dryden

Some early ATM users said they need to manage these high-speed, switched circuits with the same tools they apply to the rest of their network devices. And Cabletron Systems, Inc. and Fore Systems, Inc. told *Computerworld* they plan to improve this capability next month.

That's when Cabletron will release Version 4.0 of its Spectrum network management platform and associated tools. Then administrators will be able to launch an enhanced version of Fore's ForeView ATM element manager from Cabletron's overhauled ATM module.

Launching the ForeView ele-

ment manager from inside the Cabletron module offers users more ways to control and evaluate ATM gear from the two Asynchronous Transfer Mode (ATM) partners. Also, Spectrum will now handle alarms and correlate events from both the ATM circuits and other network components.

To do this now, some Spectrum users have figured out how to bolt ForeView onto the platform. These users said they are eager to get better integrated ATM support.

"Managing our 155M bit/sec. ATM backbone should just require one more plugin module," said Barbara Maaskant, director of information services at the Emory University School of

Public Health in Atlanta.

The school's network operators launch ForeView from Spectrum 3.1 to configure and analyze an ATM backbone that links 10 floors. Then Spectrum incorporates these ATM switch elements in its database to help operators monitor network relationships.

Simpler is better

Relying on ForeView is fine as long as the tool does its job and works easily, Maaskant said, "but we would rather have a single console entirely."

Cabletron covers ATM management needs through its module for Spectrum, but some users prefer ForeView for device-level tasks.

"I prefer ForeView over the Cabletron module for ATM ad-

Barbara Maaskant of Emory University: *We need one view into our network because dealing with multiple management consoles bites into my resources'*

ministration and so look forward to seeing it fully integrated into Spectrum in one to two months," said John Avallone, a telecommunications service analyst at the Lucent Technologies subsidiary

of AT&T Bell Labs in Murray Hills, N.J.

ForeView soon will appear more seamless to Spectrum operators and add new capabilities, according to officials at Cabletron in Rochester, N.H., and at Fore in Warrendale, Pa.

Two views

For example, customized screen displays will match Spectrum's presentation of the connection paths that carry ATM traffic. Also, an operator will be able to see both Spectrum's logical view of ATM network interfaces and Fore's physical view.

Installing this combination won't require expertise in adapting applications within Spectrum, and ForeView will hook into Cabletron's ATM module to take full advantage of Spectrum modeling, according to officials.

"Certainly a single platform for managing all network elements is desirable," said John Scoggan, a technical consultant at Delmarva Power & Light's Co. advanced technologies group in Newark, Del. "ForeView will be just another window to pop up."

Scoggan said he needs ATM support through Spectrum to prototype a test network, where an ATM server backbone will link application and database servers that support nearly 1,400 users.

Through the Fore/Cabletron integration effort, operators should be able to monitor these ATM circuits and SAP AG R/3 applications, along with 11,000 managed objects throughout Delmarva's network, around the clock, he said.

Citrix offers alternative dial-up access

By Stuart J. Johnston

When the Olympic Games come to Atlanta this summer, city officials will have a message for residents who work downtown: Don't even think about going to work.

During the three weeks of athletic competition, many Atlanta workers will be sitting at a desk at home, linked to their offices by modem.

That also creates a dilemma: How do you give remote users access to local client/server and legacy applications without spending a fortune and still provide performance that is nearly as good as being on the LAN?

Some Atlanta companies will opt for Citrix Systems, Inc.'s WinFrame/Access multiuser application server for dial-up computing.

"In the past, I've said you can't run legacy systems across phone lines. It can't be done," said Wes Barlow, an operations and LAN manager at Creditor Resources, Inc., an insurance company in Atlanta. WinFrame/Access offers users "acceptable" performance when they remotely access the company's Borland Internation-

al, Inc. Paradox database, which runs on the LAN, he said.

WinFrame/Access lets remote users run a simple client on their PCs, which lets them connect to

a Microsoft Corp. Windows NT Server box that runs users' individual Windows applications sessions locally. Only keystrokes, mouse events and screen changes go over the telephone line, so performance is nearly as good as being there, according to five users.

es go over the telephone line, so performance is nearly as good as being there, according to five users.

Faster than ISDN

One user tried running databases across Integrated Services Digital Network (ISDN) lines, which offer 128K bit/sec. bandwidth. Even with 5-to-1 compression, performance was really slow, said Mark Marcus, director of new technologies at Imonics Corp., a systems integrator in Atlanta. He said using WinFrame/Access was lot faster, even with 14.4K bit/sec. modems.

Citrix in Coral Springs, Fla., recently started to ship the package, which costs \$2,995 and includes a copy of Windows NT Server and 10 user licenses.

WinFrame/Access lets remote users run Microsoft's Windows 95, Windows 3.1, MS-DOS and Windows NT client sessions on NT Server, which communicates by using Citrix's specially developed communications protocol.

The server package requires a 486- or Intel Corp. Pentium-class

Citrix, page 66

Benefits of using Citrix WinFrame/Access

- **Economical dial-up access** – Multiple users can run on a single communications server
- **Simplified application management** – Windows applications run on the server so they don't have to be transferred to each client
- **Thin client** – Users' client software runs on 640K bytes (2M bytes recommended)
- **Extends PC's life** – A 386-based client PC can run 32-bit applications because the code executes on the server, not on the client
- **Remote administration** – Administrators can dial in to perform tasks
- **Compliant security** – WinFrame/Access comes with Windows NT Server and uses NT's security
- **Network integration** – Will work with networks running Windows NT and NetWare

Try it for yourself

Banyan aims to spin Web into Vines

By Tim Ouellette

Banyan Systems, Inc. wants to make it easier for Vines network users to access the Internet and exploit some of Windows NT's capabilities.

At the recent Association of Banyan Us-

ers International conference in Chicago, the Westboro, Mass., networking company announced a development agreement with Incognito Software, Inc. in Vancouver, British Columbia. Incognito will integrate World Wide Web and Internet services seamlessly with Vines networks. Compa-

nies can keep their Vines servers and have Web access.

Banyan also announced an alliance with Attachmate Corp. in Bellevue, Wash., to provide remote access to Vines networks via Attachmate's Remote LAN Node software.

Banyan will replace its own CommServer enterprise gateway with Attachmate's Windows NT-based TCP server. This will give Vines users the option of using either Vines or TCP/IP.

Banyan is also catering to the many Vines users who run Microsoft Corp.'s Windows NT. Banyan announced StreetTalk Access for Windows NT File and Print Services and plans to develop an NT-native version of StreetTalk. StreetTalk Access lets users access the file and printing features of NT via the StreetTalk directory.

"Banyan really reinforced that their direction is Vines and services on NT," said Jim Becker, president of PhilaBUG, the Philadelphia Banyan Users Group. That focus may leave some Unix customers feeling left out, however, he added.

"The vast majority of our users already have NT in their network," said Jeffrey Bernard, director of enterprise marketing at Banyan. "We want to pull critical pieces of NT into the Vines network."

Briefs

HP targets NT, NetWare management

Hewlett-Packard Co. outlined new management options for networks based on Microsoft Corp.'s Windows NT and Novell, Inc.'s NetWare. The OpenView platform and its components for network and systems management can better address users' needs now that HP has coordinated once-separate product groups.

IBM to add Notes link to middleware

IBM late this month will add a Notes link to the version of its MQSeries messaging middleware that runs on Hewlett-Packard Co.'s HP-UX operating system. The link, which lets desktop Notes users connect to back-end transaction servers through MQSeries, is already available on IBM's AIX and OS/2 platforms. The HP-UX release of MQSeries will also support the latest versions of that operating system. Shipments start on March 29.

Wireless travel info

Wireless network developer Geotek Communications, Inc. in Montvale, N.J., has reached an agreement to deliver traveler information via SmartRoute Systems in Cambridge, Mass. The information will be delivered over Geotek's digital wireless networks. The services will be aimed at commercial vehicle operators with dispatch operations. They will be offered in Boston in April and will then be expanded to other cities with Geotek networks.

Success Revolves Around the Net.Engine

The following companies serving computing, telecommunications, and networking applications are designing or now delivering systems being driven by the UltraSPARC™ microprocessor. The UltraSPARC net engine – optimized for the latest version of Solaris™ and Solstice™. The 64-bit processor with world-class performance. The industry's first microprocessor to fully support the multimedia and bandwidth requirements of today's and tomorrow's network requirements. Please call one of these companies serving your application area now. Windows NT network users get more security

Security Dynamics package requires log-in and password authentication

By Laura DiDio

A new software package secures Windows NT Workstation and NT Server-based networks for local and remote users. Users

and analysts said it is one of the first such products for the Windows NT environment.

ACE/Client 2.0 from Security Dynamics, Inc. (SDI) gives users of Microsoft Corp.'s

Windows NT Server and Windows NT Workstation two levels of log-in and password authentication to help ensure secure local and remote network access.

ACE/Client 2.0 for Windows NT works

with SDI's ACE/Server software and SecurID token-security products, said Eric Ogren, a product line manager at SDI in Cambridge, Mass. ACE/Server is SDI's flagship security offering. It runs on industry-standard Unix platforms such as Sun Microsystems, Inc.'s Sun OS, IBM's AIX and Hewlett-Packard Co.'s HP-UX.

Network management

The combination of ACE/Server, ACE/Client and the SecurID token component is like an employee badge. Users enter a six-digit personal identification number each time they access the network; a light-emitting diode device (about the size of a credit card) displays an access code that lets users log on.

The technology provides more of an impediment to would-be hackers because the access code automatically changes every minute.

This type of functionality is important to early users such as Kim Takayama, a network manager at American Cyanamid Agricultural Research Center in Princeton, N.J. The center is increasing the number of remote users who access the network, Takayama said.

"The ACE/Server and Client software has worked wonderfully for us," Takayama said. "Used with the SecurID token, it's very tough for anyone to get on the network and compromise security."

Takayama said he also likes that SDI's ACE/Server and ACE/Client software lets end users and network administrators use standard Windows NT Workstation and Server commands and management utilities when they log in. This means American Cyanamid's administrative tasks can be performed via NT's User Manager and Event Viewer utilities.

"It's a very smooth integration and a very practical one. Our administrators don't have to learn a different set of security commands," Takayama said.

Besides authenticating the user's identity, the ACE/Server and ACE/Client packages give administrators an audit trail that records all access attempts.

Michael Howard, president of Infonetics, Inc., a San Jose, Calif., consulting firm, said SDI's ACE/Client software leads the pack in providing advanced authentication for Windows NT. In the past, Howard said, one of the biggest obstacles for users who wanted to implement security was the high price per seat.

"It wasn't unusual for security software to cost twice the price of the PC. But at under \$150, the ACE/Client for Windows NT is very cost-effective and one of the more reliable products I've seen," Howard said.

ACE/Client costs \$149 per PC; ACE/Server pricing starts at \$2,450. The SecurID token starts at \$34 per client token.

If you are responsible for information technology strategy and investment decisions you need to understand today's strategic issues:

- How to apply technology to meet customer needs
- How to justify investments in technology
- How to leverage today's systems to create an effective banking environment
- How to exploit emerging technologies
- How to develop new delivery and payments systems
- How to transform repositories of data into strategic information

BAI's Bank Technology Forum brings together bank technology experts and leading industry providers to address these and other topics vital to your organization's success.

If you are looking for ways to increase revenue and productivity through new technologies, you cannot afford to miss this event!

Pan-European data network OK'd

Hermes, to start midyear, will use railway cable infrastructure

By Elizabeth de Bony
BRUSSELS

The European Commission recently approved Hermes, the joint venture for a pan-

European network dedicated to cross-border data traffic that primarily uses railway cable infrastructure.

The advantage to users is convenience: Instead of having to negotiate with the tele-

phone provider in each European Commission country, they can deal with one source for data needs across borders.

Hermes is an alliance of GTS Hermes, Inc., 10 European national railways and

Racal-BR Telecommunications Ltd. (Racal-BRT). It aims to be a carrier's carrier, used by public network operators, carrier consortia, cellular telephone companies and other authorized telecommunications operators, according to the European Commission.

Cross-border appeal

Hermes should also appeal to large European companies with cross-border communications needs, said Rob Ollerenshaw, an analyst at CIT Research Ltd., a market researcher in London.

The pan-European network will start operations midyear. That's when the member states are required to end all national restrictions on the freedom of alternative infrastructure operators to supply services such as data transmission.

European legislation approved earlier this year set July 1 as the deadline for member-state compliance.

The European Commission believes Hermes may grab a large share of the market for pan-European data transport networks. But it will face powerful competition — such as the current national telecommunications operators.

GTS Hermes, Inc. supplies value-added telecommunications services; Racal-BRT supplies business and operational telecommunications services to the British Railways Board.

GTS Hermes is a subsidiary of the Global TeleSystems Group in the U.S., and Racal-BRT is a subsidiary of the U.K.'s Racal Electronics group.

Within the European Union, all national railway undertakings, except those from Portugal, Ireland, Luxembourg, Greece and Finland, are participating. The Swiss national railway is also part of the venture.

De Bony is an IDG News Service correspondent in Brussels. Joanne Taaffe in the News Service's Paris bureau contributed to this story.

server with 16M bytes of RAM for the basic system and server software, and between 4M and 8M bytes of RAM per concurrent user session on the server. The client software requires at least 640K bytes of RAM on the end user's PC; 2M bytes are recommended.

Lower costs vis-a-vis other options, such as Symantec Corp.'s PC Anywhere, are also a factor in information technology managers' choice of Citrix.

"With PC Anywhere, you have to pay a license fee for every user who has a copy of the client software, plus you have to have a dedicated machine for each user who dials in," said Cortne Pappas, an account manager at National Business Group Reseller, a large systems integrator in Atlanta. "A single WinFrame/Access server can support 55 concurrent users," he added.

New Products

Smart Storage, Inc. has introduced SmartCD Archive NetWare Loadable Module (NLM) 1.51 software.

According to the Andover, Mass., company, SmartCD NLM 1.51 software lets users access data stored on CD-recordable media. It provides native access to CDs by

presenting the CD storage structure as a mountable Novell, Inc. volume.

Administrative tasks such as changing CDs and configuring devices are performed via a menu-driven interface or from the command line.

Users can view CDs on the system as a single volume or individually with a volume that corresponds to each disc.

SmartCD Archive NLM 1.51 is device-independent. It lets users add and mix SCSI

CD readers and jukeboxes in one modifiable storage structure.

Pricing for SmartCD Archive NLM 1.51 starts at \$495 and is based on specific devices in the CD storage structure.

► **Smart Storage**
(508) 623-3300

Optical Data Systems, Inc. has unveiled Micro-Infinity Plus, a switching hub for Ethernet and Token Ring LANs.

According to the Richardson, Texas, company, Micro-Infinity Plus has 10 slots for Ethernet or Token Ring modules that support up to 180 Ethernet or 160 Token Ring users on one hub. It was designed for midsize workgroups on different floors of a building or remote sites connected by a high-speed backbone.

Pricing for Micro-Infinity Plus starts at \$5,080.

► **Optical Data Systems**
(214) 301-3811

Syrius Research, Inc. has introduced RouteOne, an electronic-mail application.

According to the Los Angeles company, RouteOne is a workflow routing system. It integrates with Microsoft Corp.'s Mail, Lotus Development Corp.'s CC:Mail and Novell, Inc.'s GroupWise.

It was designed to integrate with PC DOCS, Inc.'s PC DOCS Open for retrieval and management of routed documents. RouteOne gives E-mail users immediate access to documents for review, modification and distribution.

RouteOne lets users watch the routing sequence of messages and document receipts and requested actions. It lets users change routing sequences, add or delete recipients, cancel routing actions and delete documents at any point in the process.

RouteOne's pricing starts at \$89 per user.

► **Syrius Research**

(310) 643-4550

CheckPoint Software Technologies, Ltd. has announced CheckPoint FireWall SecuRemote, client encryption software.

According to the Redwood City, Calif., company, CheckPoint FireWall SecuRemote enables secure, private communications by mobile and remote users through dial-up connections on the Internet. The product encrypts data before it leaves the laptop and provides a client-to-firewall connection. When the data reaches the gateway, FireWall software decrypts the data and sends it to its destination in the network.

CheckPoint FireWall SecuRemote features support for dynamic Internet protocol addressing and includes public-key technology for user authentication.

CheckPoint FireWall SecuRemote works with CheckPoint's FireWall-1 Internet gateway software on Sun Microsystems, Inc.'s SunOS and Solaris, Hewlett-Packard Co.'s HP-UX and Microsoft Corp.'s Windows NT. Pricing will be announced in June.

► **CheckPoint Software Technologies**
(415) 562-0400

Stampede Technologies, Inc. has announced Remote Office Gold 3.0, a mobile communications product.

According to the Dayton, Ohio, company, Remote Office Gold 3.0 lets mobile users run IP and IPX simultaneously, so users can access office resources and use a network's Internet access through TCP/IP in one telephone call. It includes docking station support, corporate security features and dual-mode modem support.

Pricing for Remote Office Gold 3.0 starts at \$1,095 for an eight-port version.

Custom Publications

The Computerworld Custom Publications Program

Your Technology Solution Showcase

"Computerworld's Custom Publications Program helped Hewlett-Packard reach a broad range of new customers with a comprehensive message."

"When it came time to decide what vehicle we should use to get our message across to customers, we had a number of critical requirements. We wanted the piece to convey the strength and completeness of our solution for IT organizations. In addition, it needed to highlight the experience and success of our customers and present a comprehensive point of view. Computerworld's Custom Publications Program helped us fulfill these requirements, and more."

The transition our customers are making is dependent on the smooth integration of client/server hardware, relational database, operating software, applications, and other software tools. This publication allowed us to include information about the products and services offered by our strategic open systems partners — thereby providing customers with an integrated view of the complete solution.

Once completed, the piece was placed in three computer industry journals. And our sales force is now equipped with a valuable marketing tool.

The bottom line is that it works. Our survey results show that custom publication readers more readily recall Hewlett-Packard as a provider of flexible, enterprise-wide computing solutions. That's why Computerworld's Custom Publications Program has become a key part of our marketing strategy."

Internet: <http://www.ctron.com/>

the Cabletron SmartSwitch™ Family

Let's Talk Speed

A dedicated ASIC-based switching engine forwards packets at a blazing 750,000 packets per second. Add support for 16,000 MAC addresses and you have a switch that significantly outperforms its nearest competitor.

Let's Talk Reliability

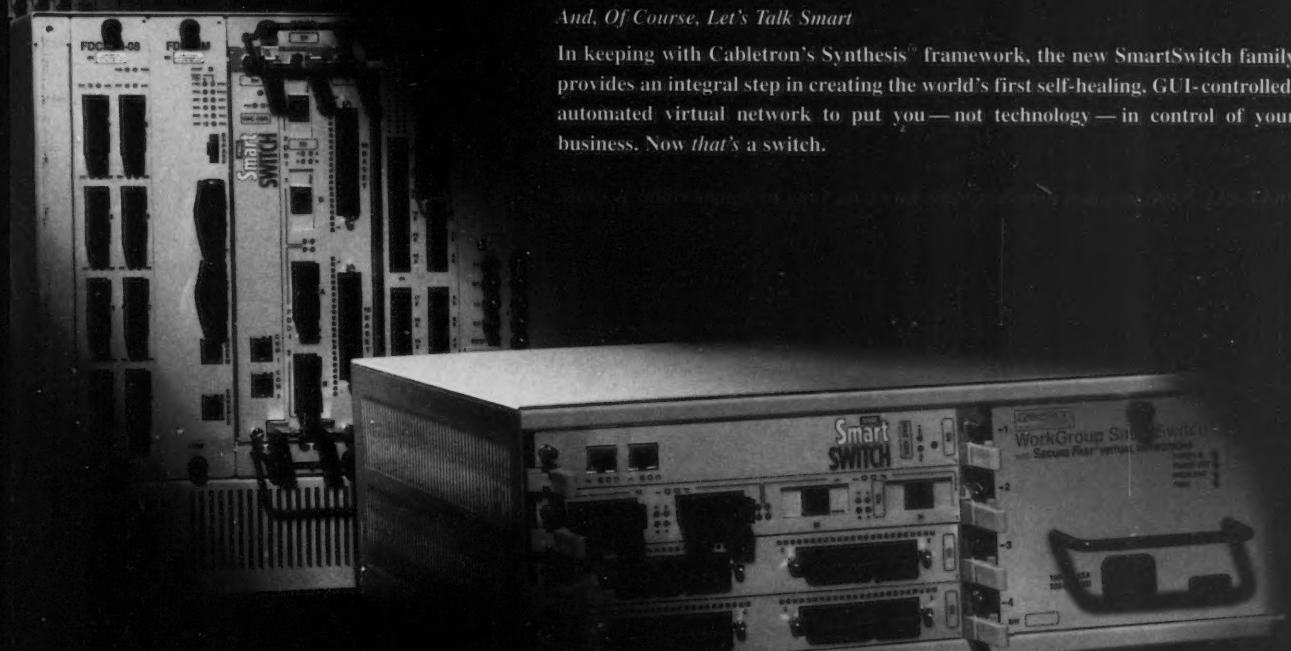

With built-in alarm thresholding, redundant links and RMON support, Cabletron's new SmartSwitches lay the foundation for a highly manageable switched infrastructure. If something has to get through, you'll want it traveling on a SmartSwitch.

Let's Talk Flexibility

Whether you're starting from scratch or building off an existing network, SmartSwitches are the perfect fit. The MMAC and MMAC-Plus SmartSwitches protect investments as they leverage the security and reliability of a "smart hub." The modular Workgroup SmartSwitch provides up to 48 switched Ethernet ports as well as a high-speed uplink, and includes many of the same fault tolerant features you'd expect from a Cabletron hub.

And, Of Course, Let's Talk Smart

In keeping with Cabletron's Synthesis® framework, the new SmartSwitch family provides an integral step in creating the world's first self-healing, GUI-controlled, automated virtual network to put you—not technology—in control of your business. Now that's a switch.

The Internet

On-line services buzz with deals and debuts

By Mitch Wagner

The on-line services industry was chock-full of activity, confusing plot twists and intrigue earlier this month.

In about a dozen announcements over a three-day period, CompuServe, Inc. and America Online, Inc. announced alliances with Microsoft Corp., Netscape Communications Corp. and other vendors. All the deals were designed to beef up the proprietary on-line services' access to the Internet and attract more consumers.

For businesses trying to market their goods and services on the Internet, this was good news because on-line services such as AOL and CompuServe can bring millions of consumers to the Internet (see chart).

Among the deals, AOL upgraded its Internet browser of

ferings and announced a plan to license the Java programming language from Sun Microsystems, Inc.

"This is great," said Eric Goldreyer, president of Inns & Outs, Inc., an Austin, Texas-based publisher of an Internet guide to bed-and-breakfast inns.

"It means AOL and the proprietary networks are getting it in gear, with browsers that will support functionality that users are interested in. Our site uses frames technology and Java applets, and, frankly, if you come to the site via AOL currently, it's not going to look that good," he said.

Changing fancy

America Online, based in Vienna, Va., said March 11 that it will offer the Netscape Navigator browser as a replacement to the inferior World Wide Web browser now offered with AOL. A day later, the company snubbed

Netscape and announced that Microsoft's Internet Explorer will be the primary browser for AOL, with Netscape Navigator available only as an option.

Microsoft, meanwhile, said it will bundle AOL access with the Windows 95 operating system and make the AOL icon available from the Windows 95 desktop — alongside the icon to launch The Microsoft Network.

Furthermore, America Online announced that both Netscape and Microsoft have licensed compression technology designed to work on both audio and video on-line traffic. That means users might one day be able to use a single software package for audio and video on the Internet, rather than the current confusing array of incompatible software packages that handle video or audio but not both.

lumbus, Ohio, has been active, too. It recently announced a deal with Netscape not only to offer the Navigator browser, but also to make custom versions of the browser available for corporate customers.

CompuServe already provides intranet, networking and electronic-mail services for

more than 900 corporations. Under the terms of the Netscape deal, those users will be able to customize the Netscape browser to point toward specific, preset Internet or intranet sites. Corporate users also will be able to redesign the browser to display their corporate logo.

Web server helps users manage, track site data

By Mitch Wagner

Pacific Coast Software plans later this month to announce a database server for the World Wide Web, along with several other tools webmasters can add to their site maintenance Swiss Army knives.

WebCatalog stores data in its own database. In response to queries from visitors to a site, WebCatalog generates pages on the fly and displays them immediately.

Fast choice

Matthew Steele, vice president of systems development at Paper Site in San Francisco, said he chose WebCatalog over software from Sybase, Inc. and Oracle Corp. Paper Site is a San Francisco-based Web site where people can buy and sell paper in industrial quantities over the Internet.

"WebCatalog is by far the fastest Web sites," page 74

Search tools help lost users find 'net resources

By Kim S. Nash

No one knows how much data is on the Internet.

Likewise, the average end user of an intranet probably needs some help figuring out exactly what information is on the internal company network.

As companies build intranet applications for processing data that is more complex than simple telephone directories or lists of health benefits, the need for search tools is becoming critical. A lack of an easy means to find important information could even nix a company's intranet plans altogether, some observers said.

Rescue party on the way

Lost users aren't happy users, said Gordon Bennett, a lead consultant at Techne Group.

"Finding a needle of value in the corporate haystack is the central problem," Bennett said. Techne Group, a World Wide Web consulting company in Waltham, Mass., is building an intranet for a large New England utility. Part of the project is thinking through a search-engine strategy.

Techne relies mostly on free products downloaded from the Internet such as

Glimpse and Harvest. However, new Web servers from Netscape Communications Corp. and Microsoft Corp. could change that, Bennett said.

Microsoft's Internet Information Server and Netscape's Enterprise Server both contain search mechanisms. For example, Netscape users are due to get search capabilities in two ways next month. One is a new

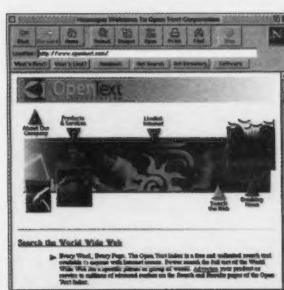

\$995 search engine called Catalog Server; the other consists of built-in search functions in Enterprise Server 2.0, also priced at \$995.

"This is extremely good news. What good is information if you can't find it?" asked Tamas Doszkocs, a computer scientist at the National Library of Medicine in Bethesda, Md.

Search tools, page 74

Where on the Web?

OpenText has started to market a search engine to intranet users. These other vendors have also begun to target IS:

• America Online
<http://www.webcrawler.com/>

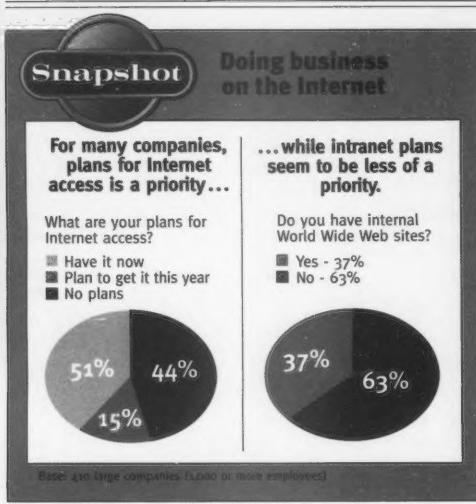

• Digital Equipment
<http://www.altavista.digital.com>

• Lycos
<http://www.lycos.com/>

• OpenText

Web sites

CONTINUED FROM PAGE 73

thing out there in terms of speeding data to the Web," Steele said.

The WebCatalog software was designed for any database application. It stores data in a flat file and generates pages automatically when visitors to a site request information, said Grant Hulbert, vice president of engineering at Pacific Coast Software in San Diego. Stored objects can include text, images and pointers to multimedia objects stored separately.

WebCatalog costs \$695 for Apple Computer, Inc. systems.

Pacific Coast (<http://www.pacific-coast.com>) has also announced SiteEdit, an editor for Web sites that works within any forms-capable Web browser, and SiteCheck, which allows users to test out connections between two Web sites.

SiteEdit lets users edit Web

sites using a forms interface on any Web browser; it doesn't require special software for uploading. Users access a special uniform resource locator (URL) connected to their site, which gets them a list of all the documents on a site. They pick one, then replace it with new text and coding, which is input using browser forms. The URL can be password-protected.

SiteEdit is available now for the Macintosh and will be available for Windows NT by the end of the month. It is priced at \$39.95.

SiteCheck is a kind of automated prooferreader for links from one Web site to another. SiteCheck automatically checks such links to be sure they actually connect to live Web sites on the other end.

"Usually, companies hire a college kid to sit and click on links all day to make sure they're accurate," Hulbert said. "This is something that site operators can do."

SiteCheck is priced at \$79.95 and will be available at the end of March for the Macintosh.

Briefs

HP buys in to Web

Hewlett-Packard Co. recently bought in to Business@Web, an Internet business applications development firm headed by former SAP America, Inc. President Klaus Besser. Financial terms weren't disclosed. The firms will use Business@Web's object-oriented OpenScape tools to jointly design and build Internet links to customers' strategic business applications. Business@

Web is a spin-off of Cambridge Technology Group.

Internet access

Encore Computer Corp. in Fort Lauderdale, Fla., has introduced a software/network adapter combination that provides Internet access to data stored in its Infinity SP disk arrays that support mainframes and Unix servers. Internet Data Facilities includes a blocking feature that lets customers keep portions of their data inaccessible to World Wide Web browsers. Annual licensing fees start at \$25,000.

Hitachi brings personal touch to Web browsers

By Mitch Wagner

Hitachi Software plans today to announce a software tool that allows users to create personal indexes of the World Wide Web.

ZooWorks is a Windows 95 application that runs alongside almost any Web browser, tracks which pages a user visits and creates a database of the text of those pages on the fly.

Later, the user can call up ZooWorks from within a browser to look up sites by keyword and subject.

Users cheer

The tool should come in handy.

"I lose stuff all the time on the Web," said Ira Machefsky, an analyst at Giga Information Services, Inc. in Santa Clara, Calif. "It takes a while for me to find material that I found some months ago and lost and now have to find again."

Machefsky said the software serves as a complement to public-access search engines such as Yahoo and Alta Vista from Digital Equipment Corp. ZooWorks lets researchers and frequent Internet users answer the question, "What was the location of that site I saw a while ago about . . . ?"

The software lets users delete

New product

**It knows where you've been**

ZooWorks keeps track of all Web pages you've visited and keeps a running index of the text on all those pages.

Platforms supported:

Windows 95 client accessible from any Web browser on the same machine.

Availability: March 25, beta version; product version is due out eight weeks later; LAN server version will be available in June.

Price: Beta version is free; product version is \$49.95.

references to Web pages that they find useless, annotate entries for

Web pages or organize references to pages in folders according to subject or by other hierarchy.

User Jim Gurfein, co-founder of the Diners' Grapevine, an on-line restaurant directory in Port Chester, N.Y., said a user-driven indexing tool such as ZooWorks could be pretty handy. "I think it's wonderful, given the availability of a plethora of information," Gurfein said.

However, what users really need are screening tools to separate the useful sites from the fluff, he said.

Find it fast

ZooWorks uses the Topic search engine from Verity, Inc. to index the uniform resource locator and full text of every document visited. A free beta version of ZooWorks will be available March 25 at <http://zoosoft.com>. The software will be generally available within eight weeks after that, priced at \$39.95.

By the end of June, the company plans a server version that will index the Web and corporate intranets for workgroups.

Hitachi Software is a business unit of Hitachi Computer Products America, Inc. in Santa Clara, Calif.

Search tools help lost users

CONTINUED FROM PAGE 73

Bethesda, Md.

Fulcrum Technologies, Inc. plans to announce this week a set of search products compatible with popular Web servers and targeted at intranet builders. Digital Equipment Corp. meanwhile, plans to make its Alta Vista engine available to information systems groups that create intranets.

But users must examine what they get for their search dollars. The search tools in Netscape's Enterprise Server, for example, index information on only a single Web server; Catalog Server can manage data stored on several servers.

The ability to comb information for concepts, rather than just keywords, is also important, said Zac Tolley, an information center analyst at a large U.K. company. That way, users don't have to know the precise name of a document or topic they are seeking, he said.

But even thorough search en-

gines can't help users find everything they need, Tolley noted. The structure of an interface or application is what counts. "At the end of the day, a search engine cannot replace a well-planned Web server interface," he said.

Where to look

The Intranet Journal is an active on-line discussion group that tackles hot button issues for Internet-curious IS managers. Check out <http://www.brill.com/intranet>.

The search is on

Features to look for in intranet search facilities include the following:

- Customizable software agents that can search both intranet systems and the public Internet.

- Electronic-mail notification that sends users messages when a new piece of data appears that meets predefined criteria.

- Natural language capabilities that let users enter English words and phrases rather than

structured word strings.

But today's search engines don't do some life-simplifying functions, said Tamas Doszkocs, a computer scientist at the National Library of Medicine.

For example, many search engines don't return results in chronological order. "But that would be a very simple thing because Hypertext Markup Language can be time-stamped," he explained.

— Kim S. Nash

New Products

InText Systems, Inc. has announced InText WebPack, a tool for World Wide Web site development.

According to the San Francisco company, InText WebPack lets users build dynamic, searchable Web sites through a point-and-click interface. It also lets users

automatically convert Windows documents in more than 80 file formats into Hypertext Markup Language and generates hyperlinks between documents. It stores documents in folders and builds an index to make the documents searchable.

InText WebPack includes a retrieval engine that helps users find specific information on their Web site or company intranet. It also includes document summarizing and natural language querying features.

Pricing for InText WebPack starts at \$12,500. An evaluation copy is available at <http://www.intext.com>.

NetCarta Corp. has introduced CyberPilot Pro, a navigation tool for the World Wide Web.

According to the Scotts Valley, Calif., firm, CyberPilot Pro operates alongside

most popular Web browsers. The product lets users create maps of any site to help pinpoint exact information. The maps are condensed visual representations of the structure and content of Web "spaces."

These spaces can be an individual site, a collection of sites or a collection of individual Web pages unified by a common theme.

CyberPilot Pro was designed to give users Web management, advanced navigation, site analysis and structure-based search and retrieval functions.

CyberPilot Pro costs \$100.

Corporate Strategies

Nasdaq tool pays dividend

WinRunner speeds quality assurance testing

By Thomas Hoffman
TRUMBLE, CONN.

Until recently, checking the quality of the software applications it rolls out to its subscribers was a time-consuming exercise for The Nasdaq Stock Market, Inc.

Now, thanks to an automated testing tool, the all-electronic stock market is seeing 8-to-1 productivity gains.

In the past, Nasdaq's quality assurance analysts spent hours testing individual workstation and host applications.

Nasdaq's "acid test" and bitmap verification tests would ensure that data in each application program field was accurate and wouldn't, for example, change other programs.

To streamline its testing procedures, Nasdaq began looking for an automated tool. There were plenty on the market, but Nasdaq was able to find only one that handled Neuron Data, Inc. graphical

user interfaces (GUI). Nasdaq uses a Neuron GUI as a front end to its Nasdaq Workstation II applications.

The tool that supported Neuron Data was WinRunner from Mercury Interactive Corp. in Sunnyvale, Calif., according to Robert J. Hughes, director of quality assurance production services at Nasdaq.

To ensure WinRunner's effectiveness, Nasdaq paid \$75,000 to test the software over a 90-day period beginning in November 1994.

Time-saver

Its first functional test with the tool came in early 1995 with its Automated Confirmation Test (ACT) system, a Tandem Computers, Inc.-based trade reconciliation system. With WinRunner, Nasdaq tested 2,100 lines of ACT code in 80 minutes. Manual testing typically would have taken five hours.

"With this tool, we're getting better-quality products by being able to regression-test more effectively," said Anthony W. Szerszen,

manager of configuration management and test tool development in the quality assurance group at Nasdaq.

Regression testing makes sure that a new application has no effect on other applications in the same operating environment.

Since purchasing the software for another \$60,000 last spring, Nasdaq has used it to test its Small-Order Execution System (SOES) and SelectNet.

SOES is an automatic order system used for orders of up to 1,000 shares. SelectNet is an online screen negotiation and execution service that lets companies send orders of any size for any amount to market makers over a Nasdaq PC.

Nasdaq's end users appreciate WinRunner's speed.

"It's much easier to use [WinRunner] than to do manual regression testing," said Carson Shaw, a quality assurance analyst.

JERRY VALENTE

Nasdaq's quality assurance analysts
Robert J. Hughes, left, and Anthony W. Szerszen have seen productivity gains in the company's application testing procedures since Nasdaq began using Mercury Interactive's WinRunner

He has used WinRunner for the past six months to test Nasdaq's ACT and other systems.

Shaw and other Nasdaq technicians need to remain focused on moving the world's second-largest stock exchange forward — especially given Nasdaq's recent problems.

Government probe

Nasdaq is being investigated by the Securities and Exchange Commission and the U.S. Department of Justice for the wide spreads between the "bid" and "ask" prices for Nasdaq stocks.

The current spreads tend to favor brokerages at the expense of small investors, for whom Nasdaq was originally created.

"Rolling out new applications is important to [Nasdaq], but the heat is on their policies right now," said Larry Tabb, a technology analyst at The Tower Group, a financial services consultancy in Wellesley, Mass.

This summer, WinRunner will be used to test a Tandem-based application that shows the most recent sale price for a stock and other historical information, Szerszen said.

Northpoint Properties' Tom LeCain says the wireless MLS gives brokers more mobility. Freed from the need to return to the office to check a listing, brokers are more productive.

Wireless MLS is moving in

By Mindy Blodgett

Let's say you have been promoted to an important new position.

The bad news is that in just a few weeks you have to move to a city halfway across the country. You call your local real estate agent, who whips out a laptop and makes a wireless connection to a national database.

Within an hour, you and the agent have whittled down a large list of properties to a handful of interesting prospects, and the agent sets up appointments for you to view them during a weekend visit to your new town.

This scenario may be fantasy at the moment, but budding wireless Multiple Listing Service (MLS) spearheaded by IBM's Wireless Group eventually could lead to just such an efficient means of house-hunting. In a few cities, users who have portable devices can already look up property information in participating MLS listings.

The wireless MLS is being tested in sections of New Jersey over the RAM Mobile Data USA L.P. network. It is being tested in Phoenix using the CellularOne network via Cellular Digital Packet Data. A wireless MLS program via the

ARDIS Co. network in Atlanta is about to go commercial.

Tom LeCain, executive vice president of Northpoint Properties in Roswell, Ga., has outfitted 12 agents with wireless laptops. He said wireless MLS is ideal for the hot Atlanta real estate market, which is noted for its rapid turnover.

"The wireless MLS allows us to be as productive as possible and to get information as quickly as possible," LeCain said. "In this business, we work astronomical hours — 70, 80 hours a week. Not only does this wireless system make us

Corporate Strategies

Security plan hopes to give IS protective custody

By Gary H. Anthes
ORLANDO, FLA.

Perhaps the most common shortcoming in a company's security plan is that it has no plan.

That will be a lot easier to fix when the Generally Accepted System Security Principles (GSSP) roll off the presses or are posted at a World Wide Web site near you.

The GSSP are intended to guide vendors and users and will join the ranks of similar guidelines for the medical, legal and accounting professions. Some of the guidelines are available already;

Safe and sound

"GSSP would establish a set of requirements for good practice that would be well-understood by systems developers and security professionals, accepted by government and recognized by managers and the public as protecting against security breaches."

Source: "Computers at Risk," 1990, National Research Council, Washington.

more detailed suggestions will be available later this year.

At least one customer has put the GSSP to good use. Consumers Gas Co. in North York, Ontario, used an early draft of the GSSP to help migrate its mainframe-based security plan to a client/server environment. "I used their principles as a template," said Wes McClean, manager of security planning. McClean said the guidelines were very useful and gave the company "an organizational structure in which to place things."

A recent survey of more than 7,000 organizations turned up widespread support for the GSSP among information security professionals. But it also showed mixed awareness of, and support for, the GSSP among top managers (see chart).

Development of the GSSP was a high-priority recommendation in "Computers at Risk," an influential report about computer security published by the National Research Council in December 1990.

"The basis of a profession is to profess, to declare in front of others that you will abide by certain principles," said Kristen Noakes-Fry, president of Noakes-Fry Associates in Seminole, Fla., and a

member of the committee that drafted the GSSP.

The private sector is driving the development of the GSSP; that includes top managers who are increasingly concerned about information security. "The boardroom asks, 'Is there one document we can turn to see if we are in compliance?' The answer is, 'No, there is not,'" said Will Ozier, president of OPA, Inc. in Petaluma, Calif.

Moving ahead

Ozier is chairman of a 30-person committee formed by the Information Systems Security Association in 1992 to develop the GSSP. He recently outlined progress on the GSSP at the MIS Training Institute conference here on open systems security.

The security principles will occupy three tiers in a hierarchy.

At the top are nine "pervasive principles" such as "Information security accountability and responsibility should be explicit." These are included in Draft 2.0.

At the second level will be 50 to 75 more detailed principles such as "Computer systems must have logical and physical access controls." A draft of these principles is set to be released in July.

At the lowest level will be many detailed, frequently changing

principles such as "Passwords must be at least eight digits long." The GSSP committee hopes to begin drafting these guidelines by the end of this year and complete them a year later, Ozier said.

The security principles will carry some risk, experts warned. "When they become the standards for due care, there will be a

legal implication," said Hal Tipton, principal at HFT Associates, Inc. in Villa Park, Calif.

"Vendors can be liable for not building the principles into their products, and users can be held liable for not following them," said Tipton, one of the authors of the National Research Council report.

Wireless MLS

CONTINUED FROM PAGE 79

more productive, it gives us more of a life. Not having to spend so much time at the office gives us more free time."

Real estate agents can connect from anywhere to get new listings and other kinds of information; they don't need to return to the office or search for a telephone line for dial-up access, LeCain said. This raises productivity, he said.

The wireless MLS, which is sold through Inacom Corp., a reseller based in Omaha, comprises IBM notebooks and wireless modems and software from Software Corporation of America in Stamford, Conn. IBM notebooks come bundled in the deal, but other notebooks can work with the service, according to IBM officials.

Pricing is still being set. Agents can lease a modem, computer and software from IBM's Wireless Group for \$190 per month. The

agents also pay a monthly charge of \$20 for access to regional MLS listings.

Despite his enthusiasm for MLS, LeCain, who hasn't been charged for network use during testing, said he is concerned about airtime costs linked with wireless transmissions.

"But ARDIS said they may be charging us a flat fee of \$65 for unlimited use each month, which would be great," LeCain said.

"The everyday [agent] might have trouble configuring the equipment, as well. I'm computer-savvy, so I set up the systems for my office, but I think concern about technical aspects of this is slowing implementation for others," he said.

Michael Boyd, manager of business development at IBM's Wireless Group, said the system is better for busy real estate markets. But he said that interest from agents across the country is high, and he expects there soon will be wireless MLS programs up and running across the country.

Briefs

The future is clear

Information Discovery, Inc. in Hermosa Beach, Calif., has announced IDIS Predictive Modeler, a tool that analyzes large relational databases. It costs \$1,900 for the Windows version and \$25,000 for the version for Unix servers. IDIS Predictive Modeler requires IDIS, another Information Discovery product, which costs the same as the modeling tool.

CSC wins deal with Johns Hopkins

Johns Hopkins Health Systems, the parent company of Johns Hopkins Health Care in Baltimore, a mid-Atlantic managed health care provider, has signed a five-year outsourcing deal with Computer Sciences Corp. (CSC). Under the pact,

CSC will provide technology and services to help manage John Hopkins' eligibility verification and claims processing systems.

Floral service plants desktop services pact

Unisys Corp. has won a three-year, \$10.6 million desktop services contract from Redbook Florist Services to deliver, install and support Unisys PW2 advantage PCs to 15,000 florists nationwide.

Bank launches home PC services

Financial Trust Corp. in Carlisle, Pa., a bank with \$1.1 billion in assets, will let customers pay their bills by telephone and will offer PC-based home-banking services to customers via

electronic services offered by Fiserv, Inc. and Checkfree Corp. Financial Trust has outsourced its data-processing operations to Fiserv for 24 years.

Denny's orders out

Flagstar Cos., a Spartanburg, S.C., firm that owns more than 2,500 restaurants, has signed a 10-year outsourcing deal with IBM worth \$323 million. IBM's Integrated Systems Solutions Corp. subsidiary will manage Flagstar's systems, networks, application development and help desk operations. Flagstar expects to save more than \$150 million over the life of the deal. It is the largest franchisee of Hardee's restaurants and owns and operates Denny's, El Pollo Loco and Quincy's Family Steakhouse.

C O M P U T I N G W I T H O U T L I M I T S

THERE'S ONLY ONE PLACE YOU'LL NOTICE A DIFFERENCE
BETWEEN OUR MEMORY AND THE SYSTEM MANUFACTURER'S.

It's a little-known fact. Kingston® memory has exactly the same components, technology, and specifications as the leading workstation manufacturer's memory. Yet it costs up to 50% less. Maybe that's why more and more computing professionals are choosing Kingston, the memory specialists. After all, Kingston is the world's leading manufacturer of memory. Our engineers customize the design of each module according to the specifications set by workstation manufacturers.

In fact, Kingston has licensing agreements with Sun Microsystems® and Silicon Graphics®, plus service agreements with DEC™ and IBM®.

And just to prove how confident we are in our memory, we give it a lifetime warranty. To get the memory that's just right for your workstation, call our toll-free number: (800) 588-5351. You'll find that our memory

is the same as your workstation manufacturer's in every way, except one: the price.

Everybody knows about the year 2000 problem, but The Equitable decided to

Photo: Steve Liss

Face up to it

Bill Born has great credentials for fixing The Equitable Life Assurance Society's year 2000 problem — he helped create the mess 20 years ago.

As a young programmer, Born was assigned to find out why the insurer's Computer Assisted Policyholder Service (CAPS) sys-

tem continued to report policies dating back to the late 1800s as new business.

Born discovered that the problem was that CAPS, similar to most other systems of the day, used only two-digit year codes, so the system couldn't differentiate between centuries.

Face up to it, page 84

BY ROBERT L. SCHEIER

Face up to it

CONTINUED FROM PAGE 83

Because the oldest policy in the system is from 1893, Born had changed CAPS to regard policies with a date over "92" as old business. That would work until the early 1990s, when "nobody was expecting these systems to still be around," he remembers.

But CAPS is still around, accounts for \$1 billion in annual premiums and hit the wall again in 1993. This time, Born says, "it hit me that I had put the problem in."

The wake-up call gave The Equitable a head start in fixing CAPS and other applications that will run into trouble by the year 2000. The firm was also lucky because it still employs information systems veterans who know CAPS and insurance inside out. Its ambitious approach to solving the problem seems to be working because the New York-based company finished a pilot of its year 2000 conversion in December, and team members are 80% confident that they will finish the work by year's end.

Advance planning

The plan for CAPS Millennium, as it came to be called, was unveiled on Nov. 1, 1994 after seven months of work by a team headed by division manager Jim Fox. The team proposed splitting the year 2000 fix into manageable subtasks and improving CAPS at the same time.

Fox and his team didn't want to rewrite CAPS on a client/server architecture, which Senior Vice President and Chief Information Officer Leon Billis estimates could cost upward of \$250 million — with no guarantee it could even be done. The team was also skeptical of vendors' "black box" solutions of taking CAPS code and returning it year 2000-compatible. Even if the vendor delivered, The Equitable would still have to figure out which fields to convert and debug the interfaces among the 1,500 CAPS modules.

The team's solution reminds Born of the joke about how to eat an elephant: one bite at a time. Fox proposed correcting CAPS one module at a time, with Cobol "bridges" analyzing data streams between corrected and uncorrected modules and doing any needed translation. This means that work on individual modules can proceed without waiting for other modules to be fixed. Once the code is corrected, the team will convert the 2.1 million master records in the CAPS database using the same bridge programs.

Fox also needed to make the elephant appetizing. Early cost estimates for the fix ran upward of \$8 million, a high price just to fix a problem. Fox stayed under the budget radar until he had a defensible plan. He took tech-

Choose your weapon

The CAPS team considered four ways to solve the year 2000 problem. They chose the first; another choice might be best for you.

THE APPROACH

Fix the system by converting existing code and data.

WHEN TO CONSIDER IT

System is mission-critical; prohibitive time or cost to rewrite. Have good in-house expertise.

THE APPROACH

Replace the system.

WHEN TO CONSIDER IT

System is a commodity application with little value-add for your company. You are sure the vendor (or your staff) can deliver the new system on time.

THE APPROACH

Run your homegrown code through an outside service firm's "black box."

WHEN TO CONSIDER IT

You have confidence in the vendor and understand you'll still have to do a major analysis of the existing application and test the converted code.

THE APPROACH

Leave it to the software company that developed the application.

WHEN TO CONSIDER IT

Vendor is large and viable enough to do the conversion. You'll still have to retrofit the new version on top of any customizing you've done to the existing version.

nical director Ron Johnson and senior systems analyst Joe Cherichella off other projects so planning work wouldn't require formal funding.

The resulting proposal not only included expanding the date fields to four digits, but also expanding other elements such as the face amount on policies, which determines how much the insured can be paid in case of a claim. The team also proposed recompiling the application so it no longer would rely on a Cobol compiler, which IBM will stop supporting this summer. Fox's proposal reads like a marketing piece with its own logo and the words "The Time is NOW!" Enhancements, not the date problem, were the centerpiece of the proposal.

Billis approved the first, or "risk avoidance," phase in late 1994 but ordered that its \$2.6 million price be cut. He was already exploring the idea of using offshore programmers to lower information technology costs and drove a hard bargain with HexAware Technologies, Inc. in Princeton, N.J., and Bombay, India. HexAware is doing much of the work in Phase 1 for little or no profit, which Fox estimates will cut the Phase 1 cost to just under \$2 million. In return, HexAware gets experience and an inside track on future work.

Fox's team did a pilot on the "automatic collections" portion of CAPS, which consists of about 75 modules that represent a cross-section of code and platforms found in CAPS. As part of the pilot, the team also revised four separate test environments to reflect the expanded year fields. Despite the immaturity of the automated tools and the incompatibilities between the old and new versions of Cobol, the pilot went into production on schedule, and Fox says he expects the CAPS code conversion to be done by year's end. The only real risk, Born says, would be losing key members of The Equitable or HexAware teams.

The year 2000 work "is just a big maintenance project," Johnson says, but that makes it sound easy. The Equitable was in a good position because it understood CAPS, owned the source code and had proven maintenance methodologies and test suites. When an information technology organization doesn't hold such cards, it must consider other options (see chart).

Some critics argue that The Equitable risked failure by overloading the year 2000 conversion with other work. Born admits the team "agonized" over that but points out that the other changes open up new business opportunities.

"We've got 2 million lines of code," Johnson says. "We've got to look at them all and recompile them all" just to change compilers and the date elements. "Once we've gone through this, we don't want to look at all that again." Eating an elephant once is enough, no matter how many pieces it's in.

Scheier is a Computerworld senior editor, Management.

Database dynamos

Here's an obscure marketing award you should know about: the Information Technology and Analysis Awards, recently handed out by the New York-based Database Marketing Association.

The reasons you should know about this award are: 1) Great ideas, 2) Advanced technology, 3) Information systems had little to do with them.

Consider A. B. Data in Milwaukee, a direct marketer that specializes in fund-raising. Its winning neural network application in a telemarketing campaign increased profit per donor from \$1.22 to \$1.62 in eight months.

Research director Gary Plouff says the system predicts which donors are "highly likely to be very profitable" in the next year. That lets fund-raisers focus on them, a switch from targeting Daddy Warbucks donors who may require expensive coaxing.

Plouff built the system, which contains 12 individual neural network models running off a database, using neural network software on a 66-MHz 486-based PC. The software is from Advanced Software Applications in Pittsburgh. IS just loaded the client's data onto A. B. Data's Novell, Inc. network, Plouff says.

That endeavor is hard to beat unless you are Judith Behrens, database marketing manager at the direct response division of Allstate Life Insurance Co. in Northbrook, Ill. The division's average premium paid per customer has increased 28% since April 1985.

How? Behrens' team created a database that consolidated information on each customer: the Allstate policies they hold, the contacts they've had with the insurer, their responses to past promotions and demographic data.

Now marketers can finesse which policies to pitch and how they pitch them based on how customers respond. "Instead of a couple of mass mailings a year, we are making more contacts with people and more customized contacts. They are the kinds of contacts people want," Behrens says.

The IS role? Not much. Metromail Corp., a service bureau in Lombard, Ill., created and maintains the database. The team member from IS did little more than help select the outsourcing vendor. — Allan E. Alter

Ron Johnson, Ralph Thomas and Jim Fox are manning the front lines as The Equitable grapples with the year 2000 conversion.

The only thing as good as a brand-new server is a server that stays brand new.

- Intel 150-MHz Pentium® Pro processors
- N+1 power
- Clustered system capabilities
- Up to 48 GB In-cabinet disk storage
- Maximum connectivity of over 4.8 TB
- 64-bit, 533-MB/sec system bus
- Mix-and-match CEs in the same cabinet

If you purchase SMP servers, keeping up with changing technology is your greatest challenge. But with Unisys SMP 61000 10-processor servers, as soon as a new Intel processor is introduced, you can take advantage of it. This ability to lock into the best available performance as technology changes makes this family the smart choice for the long run.

Our revolutionary server design supports multiple speeds of Intel processors at one time, and lets you upgrade simply by adding new processor boards. And you can mix boards of different speeds within a cabinet to protect your previous investments while you grow. Unisys SMP 61000 servers even support upgrades to Intel's Pentium® Pro processor family.

Our servers run industry-standard UNIX® System V Release 4.0 operating systems as well as UnixWare® and Windows® NT,* plus popular applications and databases such as Oracle®, Informix® and Progress®.

Contact us today and learn more about the SMP servers that stay brand new while the others just keep getting older.

Mutual Survival

MassMutual's Ron Cote doesn't want to wear sackcloth when the millennium dawns

At Massachusetts Mutual Life Insurance Co., the year 2000 conversion effort is part of an effort called the Survival Project. "If we don't do this, it's shut the lights off and go home," says Ron Cote, a year 2000 project leader.

Cote says MassMutual in Springfield, Mass., has been aware of the year 2000 issue for more than 10 years. The information systems department developed some work-arounds but found them unsatisfactory. It became clear, Cote says, that "we needed a more concentrated effort in this area. We had to pick up and identify year 2000 as a survival issue."

MassMutual has hired three service providers to do the actual work. The job entails reviewing 45 million lines of code companywide and making changes as needed. Then there's the testing of the converted software and its implementation. MassMutual's schedule calls for completion of the Survival Project by the end of 1998, providing a one-year cushion.

Cote's advice to other IS professionals? "Start now. Don't wait. Take our word for it. There is a problem, and you need to get involved."

Cote says that attending a conference can be a nice place to start, "and the year 2000 Web site has a lot of good stuff." If you work in an IBM shop, he adds, the IBM year 2000 white paper is "very useful."

In technology, there's a fine line
between news and history.

pentium

This is news.

Let's face it. Everybody's worried that by the time they get a new computer, it's already old. That's why we're bringing you the latest technology sooner, so you can use it longer. Namely, Intel's hot-off-the-press 133 MHz Pentium® processor, now in two powerful AST® notebooks. The Ascentia™ P Series is packed with slick features like our SmartBay™, which houses a removable high-speed CD-ROM drive that you can swap with an extra battery or floppy drive. The Ascentia J Series is just as newsworthy, yet more affordable. Among other things, it boasts built-in 16-bit audio, integrated modem, and a Lithium Ion battery. And of course, they both offer the latest processor. So call 800-878-4AST for a reseller near you. Or check the net at: <http://www.ast.com>. After all, you deserve a notebook with a future.

Ascentia P 133 MHz Pentium processor, 8 MB RAM standard, 1.2 GB hard drive, 11.1" (diagonal) Super VGA TFT screen, Lithium ion battery, SmartBay modular 4X CD-ROM and floppy drive.
Ascentia J 133 MHz Pentium processor, 8 MB RAM standard, 300 MB hard drive, 10.4" (diagonal) Super VGA TFT screen, 16-bit audio, Lithium ion battery, integrated modem.

Globalization. Increased customer expectations. Rapidly changing technology. All of these hurdles add up to a major challenge for IT executives and the creation of the distributed enterprise. At ETS '96 you'll learn how leading edge companies are responding to the increasing pace of change and how they're facing a more competitive global marketplace. These four hard-hitting, provocative panel sessions of high-impact interaction, will focus on practical applications of emerging technologies.

Doing Business on the Internet

Panel Moderator:
Gay Slesinger
Vice President
Giga Information Group

Panelists: Jim Banister,
Warner Bros. Online • Brian
Boyd, United Video Satellite
Group • Steve Dieringer,
Banc One • Steven Sayre,
Lotus Development
Corporation

Discover what this phenomena means to business and the distributed enterprise.

Find out if the Internet is "an aging technology looking for problems," or the prototype of a new world of networks that will change the face of business.

Enterprise Networking

Panel Moderator:
Tim Andrews
Vice President
CSC

Panelists: Tom Brake, Pacific
Gas and Electric • Marc
Dodge, UPS • Alan
Guibord, R.R. Donnelley &
Sons • Tom Thomas,
3COM Corporation

Examine how the latest in converging communications technologies has been implemented to meet challenges faced by top corporations worldwide.

Hear candid discussion on building infrastructure, deploying high-speed communications, internetworking and implementing new broadband applications, which combine voice, data and images.

Enterprise Application Development

Panel Moderator:
Alan Alper
Editor
Computerworld Client/Server Journal

Panelists: Richard L.
Hudson, Global Marine,
Inc. • Mitchell Kertzman,
Powersoft Corporation and
Sybase • Gary R. Osborn,
Hughes Space and
Communications Company
• Roger Thibodeau,
Connecticut Mutual Life
Insurance Company

Explore the latest advances in application development, including the "killer-app" of the '90s, data warehousing.

Listen to panelists reveal which new advances in application development work...and which don't.

Distributed Systems Management

Panel Moderator:
Maryfran Johnson
Executive Editor
Computerworld

Panelists: Brian Buck,
Platinum Technology
Incorporated • Chet
Geschickter, Judith Hurwitz
Consulting Group • Andy
Mullins, Candle
Corporation • Frank
Petersmark, Amerisure
Technical Services • Tim
Tokarsky, Merrill Lynch

Learn how top CIOs faced and solved challenges such as tracking PC hardware and software, capacity planning, disaster management, roll back and recovery, systems tuning and more. Determine how leading CIOs meet the technology expectations of top management and users.

Solution Labs

See for yourself the technology solutions from first rate IT vendors. In these small, highly interactive educational forums you will explore specific solutions to the issues facing you and your organization. Come visit with the following sponsors:

The 1996 Executive Technology Summit

Guiding the Distributed Enterprise

Where IS Executives Get Answers on:

- Doing Business on the Internet
- Enterprise Networking
- Enterprise Application Development
- Distributed Systems Management

Your time has never been as valuable.

That's why you'll attend ETS '96. Presented by the Society for Information Management (SIM) and Computerworld, this exclusive educational event is designed by and for CIOs and Senior IT executives to give you the latest information on the top technology issues you face today. With its array of Practitioners Forums, Solution Labs, and networking opportunities, ETS is the essential tool for senior IT professionals.

The ETS Master of Ceremonies, Scott Shuster, the founding editorial director and ongoing chairman of *Business Week's* conference program, as well as keynote speakers Colin Crook, Senior Technology Officer, Citicorp and David C. Moschella, Vice President of Research, International Data Group, are guaranteed to provide keen insight and focused, on-target answers. The ETS program will help you meet your business objectives and provide peer-to-peer networking.

Managing

Executive Track

Crown Books Corp. announced that **Keith Hammer** has been appointed vice president and chief information officer. Hammer joined the Landover, Md., bookstore chain in 1994 as assistant vice president and director of information systems. Hammer previously served as a director of MIS at Circuit City Stores, Inc.

Max D. Hopper, the retired IS chief at AMR Corp., has been named a director at large by the **Microelectronics and Computer Technology Consortium** in Austin, Texas.

Sears, Roebuck and Co. in Hoffman Estates, Ill., has promoted **Jerry Miller** to the new post of vice president, logistics systems. He reports to Joseph Smialowski, Sears' CIO. Miller was senior director, logistics systems at the retailer.

Cablevision Systems Corp. recently promoted **Thomas C. Dolan** to senior vice president and CIO. Previously, Dolan was vice president and CIO at the Woodbury, N.Y., cable television systems provider.

Louis Roberts and **Michael Livoisi** are now vice presidents of information technology at **First Montauk Securities Corp.**, a subsidiary of Montauk Financial Corp. Roberts, who previously worked at Bellcore, will be responsible for First Montauk's systems and software and will evaluate new technology. Livoisi will run the Red Bank, N.J., brokerage's database and networks. He previously worked at AT&T Corp.

Larry L. Thomas is the new vice president of IS at **Electronic Clearing House, Inc.** Thomas has held management positions at Unisys Corp. and Burroughs Corp. He is also an author and speaker on wireless communication standards and Internet-related subjects. Located in Agoura Hills, Calif., Electronic Clearing House is a provider of point-of-sale equipment, credit-card processing and check guarantee services.

Kenneth Craig was named vice president and CIO of **Philips Consumer Electronics Co.** In Knoxville, Tenn. The company is a division of Dutch giant Philips Electronics N.V. Craig led a double life at his last job: He served as president of SAP Brazil, while he was a managing director at Origin Technology and Business, Inc. in Murray Hill, N.J.

Ann C. Sullivan was named CIO at **Maimonides Medical Center**, a hospital in New York. She was formerly the hospital's chief operating officer and chief financial officer.

The **National Association of State Information Resource Executives** has announced the following appointments among its members: **Doug Couto** has been named Information Management Coordinator for **Iowa**. This is a new position within the Department of Management. **John McDowell** has been appointed deputy director of the **Arizona Information Resources Management Group**.

May workshops

A listing of workshops for IS managers. Most workshops are also offered later in the year in other cities. To find the time and location most convenient for you, call the contact phone number.

Communicating with IS Clients and Customers. Boston, May 2-3 — Fee: \$750. Contact: QED Information Sciences, Inc., Wellesley, Mass. (800) 395-1109.

Systems Analysis and Design for Information and Business Professionals. Los Angeles and Princeton, N.J., May 6-9 — Fee: \$1,350 to \$1,550. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Connecting to the World Wide Web. Philadelphia, May 7-8; Dallas, May 13-14; Boston, May 20-21 — Fee: \$895. Contact: Data Tech Institute, Clifton, N.J. (201) 478-5400.

The Crossing the Chasm/Inside the Tornado Seminar Series. Chicago, May 7-8 — For managers and those incorporating information technology in the enterprise. Fee: \$1,285 to \$1,395. Contact: Marketwise, Inc., Boulder, Colo. (800) 300-3846.

Business Process Re-engineering: Strategies, Techniques and Tools. Washington, May 7-10 — Fee: \$1,995. Contact: The Learning Tree International, Inc., Reston, Va. (800) 843-8733.

Information Management: The Next Generation. Boston, May 7-10 — Fee: \$475 to \$1,950, depending on days attended. Contact: Delphi Consulting Group, Boston, Mass. (617) 247-1025.

Project Management: Skills for Success. Washington, May 7-10 — Fee: \$1,995. Contact: The Learning Tree International, Inc., Reston, Va. (800) 843-8733.

Software Engineering for Project Managers. Philadelphia, May 9-10 — Fee: \$650 to \$750. Contact: Project Management Institute, Upper Darby, Pa. (610) 734-3330, ext. 17.

How to Manage, Motivate and Coach Support Professionals. Dallas, May 13-14 — Fee: \$595 to \$695. Contact: Help Desk Institute, Colorado Springs, Colo. (800) 248-5667.

Workflow: Joining the Islands of Automation. Boston, May 13-14 — Fee: \$1,095 to \$1,295. Contact: Delphi Consulting Group,

Boston, Mass. (617) 247-1025.

Communication and Interpersonal Skills: A Seminar for Technical Professionals. Chicago, May 13-15 — Fee: \$1,195 to \$1,375. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Re-engineering the Computer Help Desk. Phoenix, May 14-15; San Francisco, May 16-17 — Fee: \$895. Contact: Data Tech Institute, Clifton, N.J. (201) 478-5400.

Joint Application Development Facilitation & Methodology Using Object-Oriented Software Engineering Seminar. Greenwich, Conn., May 14-16 — Fee: \$1,475. Contact: Pierson Applications Development, Inc., Stamford, Conn. (203) 322-1606.

Identifying and Confirming User Requirements. Los Angeles, May 14-17 — For those responsible for identifying user needs in a project. Fee: \$1,995. Contact: The Learning Tree International, Inc., Reston, Va. (800) 843-8733.

Specifying and Managing Software Requirements. Santa Clara, Calif., and Washington, May 14-17 — For project managers developing requirements specifications. Fee: \$1,995. Contact: The Learning Tree International, Inc., Reston, Va. (800) 843-8733.

Information Systems Project Management. Minneapolis and Princeton, N.J., May 15-17; San Antonio, May 20-22; Newport Beach, Calif., May 22-24 — Fee: \$1,295 to \$1,490. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Strategic IS Planning. Los Angeles, May 15-17 — For senior managers. Fee: \$1,350 to \$1,550. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Consulting Skills for IS Professionals. Detroit, May 16 — Fee: \$345. Contact: Karten Associates, Randolph, Mass. (617) 986-8148.

Understanding Client/Server Computing:

Planning, Designing and Implementing a Client/Server System. Somerset, N.J., May 16-17 — Fee: \$895. Contact: Data Tech Institute, Clifton, N.J. (201) 478-5400.

Quality Review Techniques for Information Technology Professionals. New York, May 20-21 — Fee: \$1,195 to \$1,375. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Measuring and Controlling Software Projects. Chicago, May 20-22 — Fee: \$845 to \$945. Contact: Quality Assurance Institute, Orlando, Fla. (407) 363-1111.

Negotiating Skills for Technical Managers and Professionals. Los Angeles, May 22-24 — Fee: \$1,995. Contact: The Learning Tree International, Inc., Reston, Va. (800) 843-8733.

Implementing Major Change: The Human Dimension of Re-engineering. Waltham, Mass., May 22-23 — Fee: \$1,500. Contact: Hammer and Co., Cambridge, Mass. (617) 354-5555, ext. 106.

Improving Your Internal Consulting Skills: For IS Professionals. Chicago, May 22-24 — Fee: \$1,295 to \$1,490. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Managing Telecommunications: Technologies Your Company Can't Do Without. New York, May 23-24 — Fee: \$1,250 to \$1,435. Contact: American Management Association, New York, N.Y. (800) 262-9699.

Calendar announcements should be submitted at least eight weeks prior to the event and include the title of the event, dates, location, theme or focus, keynote or major speakers, principal topics and a contact person, organization and phone number.

A new generation of client/server development packages promises to help corporations build applications that reach beyond the workgroup. Vendors hope to address user demands for transaction processing, integration of legacy applications and heterogeneous networks.

By Alan Radding

The enterprise has emerged as a mecca for vendors of client/server development tools. Sensing that client/server development is about to be rolled out in large-scale applications, vendors have slapped the enterprise label on almost any tool in hopes of tapping into the high-end tool market. That market is projected to hit \$3 billion by 2000, according to Hurwitz Consulting Group, Inc. in Newton, Mass.

Tool vendors are also rushing to add 32-bit support so their tools will work with Microsoft Corp.'s Windows NT and Windows 95. "We're going through a redefinition period right now," says Dick Heiman, a senior analyst for application development tools at International Data Corp. (IDC) in Framingham, Mass.

Outdated definitions

The traditional classifications identify a tool as workgroup/departmental or enterprise. But these labels no longer serve as a useful guide because development projects fall along the spectrum between workgroup and enterprise.

Even the term "enterprise" has taken on new meaning. Enterprise used to mean mainframe, says Brent Williams, research director of application development technologies at Gartner Group, Inc. in Stamford, Conn. The tools are often associated with mainframe computer-aided software engineering (CASE). They have used extensive formal methodologies and have provided full life-cycle application development — from analysis and design to code production and deployment.

Today, enterprise means large-scale projects, with or without a mainframe. The new enterprise tools often have analysis and design fea-

tures, multiplatform capabilities, team management facilities and code partitioning for scalable deployment, says David Kelly, director of application development service at Hurwitz Consulting.

Other characteristics include support for mission-critical, transaction-oriented production applications through features such as two-phase commit, integration with transaction monitors and tools for team and systems management.

Workgroup/departmental applications, on the other end of the scale, refer to small applications that support one, a few or up to several dozen users. "You might push these tools further depending on the developer's skills," Williams says.

The tools, which primarily are SQL-centric, are used to create graphical database applications that access back-end relational databases. They build fat client applications, where the application logic is buried under graphical user interface (GUI) components. They swap fast, iterative prototyping for extensive up-front analysis and design.

Client/server development is moving past smaller workgroup applications, but not every organization is ready to embark on large-scale, mission-critical client/server production. To be useful, a client/server tool taxonomy needs to provide more options. Traditional workgroup/departmental and enterprise classifications are still valid, but IDC has added a Division group that is beyond workgroup/departmental but isn't quite enterprise. A miscellaneous category covers special cases.

The summary on pages 90, 91 and 92, compiled from interviews with consultants at IDC, Hurwitz Consulting and Gartner Group, considers how some tools fit within such a taxonomy and describes the high points and key features of each tool.

Radding is a freelance writer in Newton, Mass.

Page 98

Enterprise

Seer HPS
Seer Technologies, Inc.
Cary, N.C.
(800) 499-7337
<http://www.seer.com>

With its roots in the mainframe world, Seer HPS (High Productivity System) offers the full life cycle of client/server application development, including analysis, design, deployment,

testing and configuration. The tool isn't expressly object-oriented, but it lets developers work with modular pieces of code that have some object-oriented characteristics, such as inheritance.

It includes a repository (a central place to store objects) and messaging middleware (which helps objects communicate among themselves).

Dynasty 2.0
Dynasty Technologies, Inc.

Lisle, Ill.
(708) 769-8500

An object-oriented fourth-generation language (4GL) pioneer, Dynasty 2.0 includes four partitioning schemes, Tuxedo-compatible code generation (for use with Novell, Inc.'s Tuxedo transaction monitor), support for two-phase commit (a technique for ensur-

ing the integrity of distributed transactions) and asynchronous messaging.

Dynasty 2.0 also has expanded its database.

It lets developers build large-scale applications by using high-level, reusable business objects and rules. An automatic code generator cranks out partitioned C code, SQL statements and remote procedure calls to create a complete application.

Server Development Tools

for the enterprise

Client/server development terms

Tiers: The levels of a computing architecture at which various services can be executed. Many vendors promote a three-tier architecture that includes a presentation tier, an application services tier and a data services tier.

Partitioning: The process by which a developer breaks an application in pieces and specifies which part will run on a client or any of several servers.

Controls: Independent parcels of code that can

be dropped in to a developer's on-screen workspace. They allow reuse of code to provide basic functions.

Inheritance: A process by which developers can reuse code by referring to an existing parcel of

code rather than copying or rewriting source code. Using inheritance, most functions performed by a software component will remain untouched; new or modified functions are written as code.

Properties box: A pull-

down box containing elements that describe the functions or appearance of a software control or other object. The box lets a developer change details of how a control will appear on-screen or specify links with other application elements.

Interpret: To execute a program by examining and performing each line of source code in a high-level language at runtime. Applications built with some development packages may be limited to running in interpreted mode.

Forte 2.0

Forte Software, Inc.
Oakland, Calif.
(510) 869-3400
<http://www.forte.com>

This tool introduced scalable object technology to large-scale client/server development. Forte 2.0 includes an object repository and an

object-oriented graphical 4GL that relieves the developer from wrestling with C++. Through the repository, Forte 2.0 provides team management capabilities and automatically creates three-tier applications.

Forte recently integrated analysis and design capabilities with the development environment.

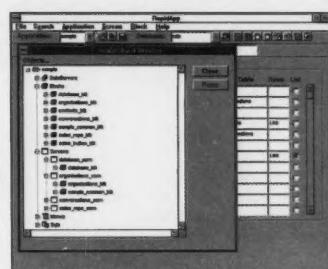

Passport 8.0

Passport Corp.
(formerly InSync Software Corp.)
Ronkonkoma, N.Y.
(516) 981-3000

Passport often is overlooked, but the tool handles large-scale, event-driven and real-time applications particularly well through a specialized event handler.

The event handler will let developers create a single generic piece of event-processing logic for all objects instead of requiring developers to create event-processing logic for each object.

Passport 8.0 separates logic code from the object, which makes it possible to reuse objects and logic code

Visual Object Browser in Passport 8.0 offers a hierarchical view of objects

separately. Developers can write and maintain specialized event logic.

Passport 8.0 also generates native compiled code, which results in high performance.

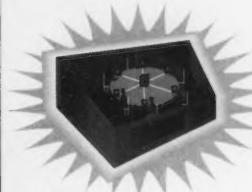

Composer 3.0

Texas Instruments, Inc.
Plano, Texas
(800) 838-1843
<http://www.ti.com>

With Composer 3.0, Texas Instruments has transitioned its mainframe-oriented, CASE-based development tool — Information Engineering Facility — to client/server computing. Composer 3.0 combines analysis and design tools with a code generator and middleware. Developers work with

objects that represent familiar high-level business entities, such as a customer. Composer 3.0 combines traditional information engineering tools with rapid development.

The tool was created for very large-scale development. Developers don't have to do any coding. All development is done through various design components. Composer 3.0 automatically generates all the code, including the user interface, business logic and database.

Workgroup/ Departmental

SQLWindows (16-bit version)

Centura
(32-bit version)
Gupta Corp.
(now Centura Software Corp.)
Menlo Park, Calif.
(800) 876-3267

<http://www.gupta.com>
Although it often bested Powersoft Corp.'s PowerBuilder in functionality, SQLWindows never could win market share. With its built-in database, repository, team management facilities and extensive use of object technology, Re-tooling for the enterprise, page 92

Client/Server Development Tools

Re-tooling for the enterprise

CONTINUED FROM PAGE 91

ogy, SQLWindows is an effective departmental rapid application development (RAD) tool loaded with ease-of-use features. Centura, the 32-bit version, has support for partitioning, which gives it improved scalability.

Delphi 2.0

Borland International, Inc.

Scotts Valley, Calif.

(800) 331-6877

<http://www.borland.com>

Borland raises the ante for Visual Basic

with Delphi 2.0. Both tools compete in the low-end graphical database access application market. Delphi's trump card has been its better use of object technology and its scalable database architecture based on Interbase Software Corp.'s relational database management system engine.

Delphi is stretching into enterprise space by adding an object repository, an open application programming interface (API) to allow integration with third-party design tools, a library of reusable components and a data dictionary.

PowerBuilder 4.0

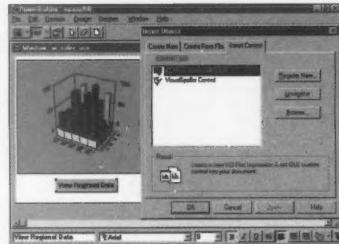

Powersoft Corp.

Concord, Mass.

(800) 395-3525

<http://www.powersoft.com>

PowerBuilder defined the client/server RAD market. This version lets developers build solid workgroup/departmental database access applications. It supports a measure of partitioning and limited object capabilities, which lays the foundation for more comprehensive object support in the future. Its integration with S-Designer gives the tool design and analysis abilities.

PowerBuilder 5.0, which is due this year, features new levels of OLE control integration

Visual Basic 4.0

Microsoft Corp.

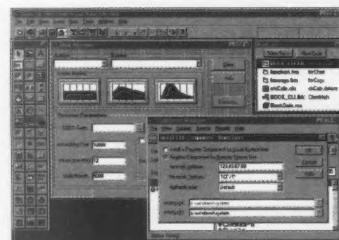

Redmond, Wash.

(800) 426-9400

<http://www.microsoft.com>

The quintessential workgroup tool, even Visual Basic aspires to enterprise status. It builds graphical, large-scale, database access applications. Visual Basic Enterprise Edition 4.0 features Data Access Objects, Microsoft's Jet 3.0 database engine, remote automation, Object Database Connectivity (ODBC), ODBC API and remote data objects that expand the tool's database access capabilities.

The additions were intended to address complaints that the tool wasn't sufficiently

Visual Basic 4.0 has a component manager tool that helps users access remote OLE servers

database-aware. It's highly debatable whether the improvements elevate the tool to enterprise class.

tries in a database table. The resulting application is a database file in which the definitions, specifications and values of the application — including the layout of the screen to business rules — are stored as data in tables.

At runtime, the Magic 6.0 engine steps through the file to execute the application.

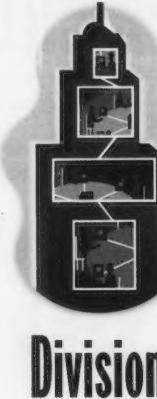

The benefit of this approach is that users can develop fast, code-free applications that can be ported easily to any platform for a Magic 6.0 engine.

Magic 6.0 was based on a unique approach to software development in which the underlying code is highly abstract.

The code is represented as en-

Special cases

Progress 8.0

Progress Software Corp.

Bedford, Mass.

(617) 280-4000

(800) 477-6473

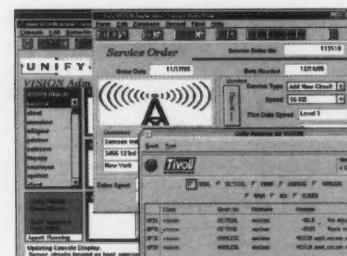

<http://www.progress.com>

Progress Software Corp. is known primarily as a relational database vendor. Its Progress 8.0 provides developers with an extended version of the company's 4GL.

Progress 8.0 features SmartObjects, a graphical component structure and a mechanism for building and linking those objects.

Progress 8.0 also includes eight prebuilt, database-aware SmartObjects, which encapsulate business logic such as queries.

Support for 32-bit code and partitioning are promised for the future.

Uniface 6.0

Compuware Corp.

Farmington Hills, Mich.

(800) 365-3608

<http://www.compuware.com>

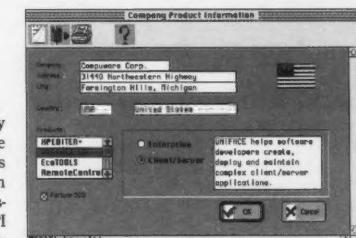

Uniface 6.0 is a powerful development environment. The product makes extensive use of modeling to separate interface, business logic and database components, which forms the basis of partitioning.

It offers robust database access through a set of native database drivers.

Uniface 6.0 also lets developers build industrial-strength transaction processing applications

Uniface 6.0 applications reflect the native look and feel of several interfaces

through support for several transaction processing monitors.

Vision 2.1

Unify Corp.

San Jose, Calif.

(800) 248-6439

<http://www.unify.com>

This tool, known for its Unify 2000 database and command line 4GL, is graphical. It provides automated partitioning, team management and an object repository. An open messaging API and global and local naming services allow the application to efficiently use components that are distributed across the network.

Vision 2.1 features built-in functionality that eliminates a lot of code writing for developers

ble script language, C and C++ interfaces and low-level, portable application services.

The environment is delivered in a set of four tool products.

Neuron Data employs a messaging facility that operates the same way as an object request broker, which lets developers create scalable, distributed, multithreaded partitioned client/server applications.

Elements Environment 2.0 provides a complete object-oriented environment and generates compiled C++ code.

An Intelligent Approach To
Better Business Decisions

SAS SAS Institute

Making the right decisions is your business. Making them easier is ours. We're SAS Institute, the recognized leader in decision support solutions.

From providing immediate access to more than 50 databases and file formats, to turning raw data into real information using a full spectrum of applications, you'll find SAS software is your complete Business Intelligence solution.

- *On-Line Analytical Processing (OLAP)*
- *Enterprise Information Systems (EIS)*
- *Decision Support Systems*

SAS Institute puts it all together in one package, complete with menu-driven interfaces to make it all quick and easy.

And, since our software works the same across all your hardware, you won't have to purchase and support single-shot software packages that weren't designed to work together in the first place.

For Your Free Guide, Just Give Us a Call.

We believe every Business Intelligence solution should provide applications breadth and depth... a consistent interface to all your business data... client/server capabilities... and portability across all your hardware.

Yours Free for a Limited Time

An Intelligent Approach to Better Business Decisions

Find Out How SAS Institute Makes It Easier Than Ever to Reach the Right Decisions...for Your Business and Your Budget.

You'll find all that and more in software from SAS Institute. But first, we invite you to find out the facts for yourself in our free introductory guide... containing insights from SAS Institute, our software users, and leading publications.

Client/Server Development Tools

Core functions of high-end tools

By David Kelly

Enterprise client/server application development tools come with a bewildering array of capabilities and functions. Understanding what each one does, let alone comparing them, can be an arduous task made more difficult by confusing marketing hype.

Businesses should evaluate tools by building a clear understanding of their company's business and technical problems. From this understanding, craft a list of minimum technical specifications. Use this list to identify enterprise application development tools that provide the needed functionality. To make your purchase easier, consider the following high-level capabilities:

- **Analysis and design capabilities.** The task of embedding business rules in a large-scale application can demand a level of functionality that is difficult to achieve with a simple, graphical, ad hoc prototyping approach. Enterprise-level tools should include a built-in analysis and design component or interfaces to third-party tools. Without some form of analysis and design functionality, enterprise development efforts most likely will spin out of control or create poorly understood business-critical applications that will prove unmanageable and difficult to modify as a business grows and changes. Analysis and design tools become an important way for developers to share application designs quickly. This is a key consideration as the scale of a project and its financial risk grow.

Questions to ask:

Does the tool require or support a specific methodology?

Does it support third-party, object-oriented and non-object-oriented analysis and design tools?

If so, are the interfaces bidirectional? (That is, are changes made in the development environment reflected in the analysis or design environment?)

- **Repository.** A repository is centralized storage for application designs, business rules and programs. A repository is essential to control a large-scale or complex project. A full-featured repository should include tools that let developers graphically

browse and select application components. To facilitate team development, a repository should include version control and configuration management capabilities. This lets managers implement controlled builds of applications and review developers' work to identify training needs and productivity patterns.

Questions to ask:

Can outside objects (C++ code, OLE controls) be stored and used in the repository?

Is the repository proprietary or can standard relational database management systems be used?

How well does the tool support third-party version control systems?

- **Database integration.** Data is the linchpin of almost every business application. The way a development environment interacts with database management systems is key in deter-

David Kelly: Design and analysis functions are crucial

mining an application's performance and functionality. A high-end development tool should automatically generate most of the data-handling logic needed to specify and control transactions. It should also let developers modify or add their own highly tuned, data-handling logic. Some tools automatically generate database tables and

structures. This lets developers focus on creating applications rather than becoming experts on relational database theory.

Questions to ask:

Can you modify or override generated SQL?

Can the tool automatically generate SQL?

Does the tool require you to write SQL?

- **Application management facilities.** In a distributed environment, system operations personnel need explicit tools and explicit logic within ap-

plications to guarantee the reliability and integrity of applications, gather performance information and troubleshoot runtime problems.

Systems management staff must be able to coordinate with developers to manage application upgrades or modifications — from finalizing the configuration of runtime executables for deployment scenarios to automating the distribution of software across a network to target PCs. The development environments should support developer efforts to create management hooks and developers' error-handling and performance collection.

Questions to ask:

Can the tool generate Simple Mail Transfer Protocol events or traps?

What events and parameters can the tool monitor?

What release and distribution mechanisms does the tool provide?

Kelly is director of the application development service at Hurwitz Consulting Group, Inc. in Newton, Mass.

Tools, tools and more tools

There are other client/server tools that you may want to consider. Most are enterprise-oriented, but a few are departmental.

THINKING Enterprise STORAGE

WORLD CLASS ENTERPRISE Storage

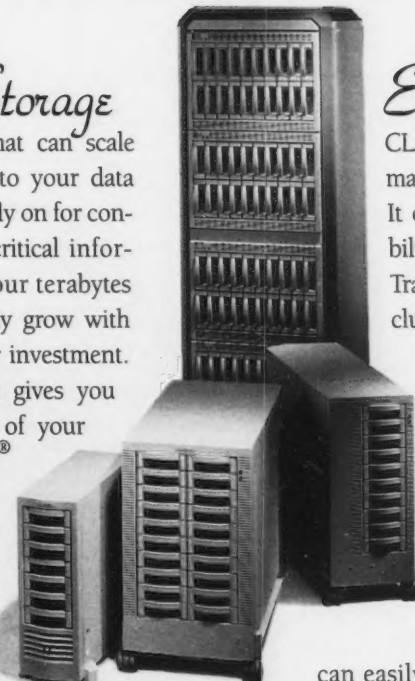

You need a storage system that can scale from your distributed offices to your data warehouse. One that you can rely on for continuous access to all mission critical information-and for security of your terabytes of data. One that will not only grow with you, but will also protect your investment. A RAID storage solution that gives you tools to centrally manage all of your data storage. With CLARiiON® you have a world-class disk array solution optimized to ensure that the integrity and availability of information throughout the enterprise is never compromised.

FOR THE Open Systems ENTERPRISE

Managers today need to select the best storage technology. That's why we've designed CLARiiON to be the premier open storage system for virtually any server and for any application environment. Scalability was never so easy!

Manage YOUR STORAGE

Getting a handle on data storage throughout your enterprise is easier than ever. Our ArrayGUIDe™ software lets you configure, monitor and manage all of your CLARiiON arrays, with just a glance at a single graphical display.

Extended HIGH AVAILABILITY

CLARiiON extends availability of information "outside the box" to your servers. It can support automatic failover capabilities for I/O channels (Application Transparent Failover-ATF), and even clustered server failover for SUN and IBM with our GuardWare™ software. With CLARiiON, mission-critical information is always available.

INVESTMENT Protection

We've built CLARiiON for maximum scalability and flexibility. As your business grows and information storage needs increase, CLARiiON can easily expand with your business while on-line. And your vital information will be protected like never before. CLARiiON's entire family of products provide the utmost in heterogeneous server support.

THE Thinking IS CLEAR

CLARiiON is the most widely accepted storage solution. So when you're thinking mission critical storage, upgradability, data integrity, performance and connectability, think CLARiiON, which was chosen as "the best RAID product of 1995" by Network Computing Magazine.* For more information, our internet address is <http://www.dg.com> or call 1-800-67-ARRAY.

By Kevin Burden

Delphi is the new kid on the block having an impact. Borland International, Inc.'s Delphi has been in the client/server development tool market for only a year. But Delphi has satisfied its users more than competitors have because it is the first tool to include features that developers need to build faster stand-alone applications — ones that don't require runtime modules such as a code compiler.

Satisfaction ratings for other packages — including Microsoft Corp.'s Visual Basic 4.0, Powersoft Corp.'s PowerBuilder 4.0 and Gupta Corp.'s SQLWindows 5.0 — are noticeably lower than Delphi's, but still positive. All four vendors are replacing their products with new versions; for example, Delphi 2.0 recently started to ship.

Computerworld contracted First Market Research Corp. in Austin, Texas, to survey at least 40 users of each client/server product. The goal was to find out what factors led users to choose a client/server product and how well the package has performed.

Delphi Client/Server Suite

Client/server development tools have matured in the past several years, which is why it's been rare for one to receive an "A" for overall satisfaction from half its users. But Delphi Client/Server edition came very close this year.

Borland has pioneered a RAD paradigm with Delphi that runs faster and produces applications that perform better and don't require a runtime module. Delphi's approach combines a visual design environment with an object-oriented language. But the key that will further unleash its performance is a true native-code compiler that Borland has added to Delphi 2.0. It will compile its Pascal source code directly into machine code.

When we asked users what led them to their development package, only Delphi users listed "speed of developed applications" among their

Top 5 reasons.

"We develop application suites, so performance is very important to us," says Jeff Carlson, manager of systems research and development at Quintiles, Inc. in Research Triangle Park, N.C. "And what we've built with Delphi runs faster than any application we built with other tools."

much, to the relief of some users. Most of what is different are the new Windows 95 controls, such as the right-click of the mouse.

A consistent interface also has contributed to the atmosphere of developer friendliness. Users of all four products ranked "ease of use by developers" as their first or second most critical reason for their product

Basic's or Delphi's. "It's like everything is passing it," Corbin says.

The good news is PowerBuilder 5.0 is on the way. It is scheduled for release in the second quarter.

Version 5.0 will include Watcom International Corp.'s C compiler engine, which turns PowerBuilder applications into machine-code executable files. Watcom is a sister company of Sybase-owned Powersoft. Version 5.0 also will support three-tier architectures and OLE controls, which makes it more similar to Delphi.

SQLWindows 5.0

For the second straight year, Gupta Corp. (now known as Centura Software Corp.) finished last in user satisfaction ratings with its SQLWindows.

But until the release of Delphi, Visual Basic 4.0 and soon PowerBuilder 5.0, SQLWindows 5.0 arguably was the more powerful development environment of the bunch. Part of its problem is "it's never been intuitive enough that I would say it's easy to use," says Tori Rosenthal, a business administrator at Micro Motion, Inc. in Boulder, Colo.

Gupta also had the fewest users who said they would buy the same product again. But more than just functionality is influencing that decision, users say. "Their financial stability is a real concern for us," says Marshall Miller, a systems programmer at Grant County Public Utility District in Ephrata, Wash. Gupta hasn't posted a profitable quarter since the fourth quarter of 1993.

Gupta also is concentrating on Centura, a 32-bit enterprise client/server development package that it will release this month. Gupta named the 32-bit tool after itself to indicate its commitment to the next generation of application development.

Gupta says it will still support the 16-bit SQLWindows 5.0, but several users interviewed said they would rather use the product that gets most of the vendor's attention.

Users speak

How would you rate your overall satisfaction with your development package?

	Very Good	Good	Average
Delphi	48%	40%	7%
Visual Basic	38%	48%	4%
PowerBuilder	26%	50%	16%
SQLWindows	10%	60%	24%

(Percentage of users. Some users offered no opinion or gave "poor" grades.)

Would you choose the same product again?

	Yes	No
Delphi	81%	5%
Visual Basic	78%	18%
PowerBuilder	60%	24%
SQLWindows	58%	22%

(Percentage of users. Remaining users were undecided)

Visual Basic 4.0

Visual Basic 4.0 applications have the same lethargic performance that users of previous versions have complained about, but Release 4.0 represents enough of an improvement over Release 3.0 that 86% of the users surveyed gave the product favorable grades for overall satisfaction.

The consensus showed that users are happy about how Microsoft has changed Visual Basic to meet market needs. Some of the tool's most notable improvements include 32-bit support, a shift from Visual Basic controls to OLE controls and the introduction of Remote Data Objects and Remote Data Control — data access objects optimized for Oracle Corp. and SQL Server databases.

The interface wasn't changed

choice. But Visual Basic had the most users (17) who ranked it first, and all gave the product an "A" or "B."

PowerBuilder 4.0

Overall satisfaction scores show that Powersoft's PowerBuilder 4.0 could be past its prime. Version 4.0 has been on the market since 1994, which means it lacks hot technologies such as custom controls or compiled code. "It needs to improve with new features," says Gregory Corbin, a senior systems analyst at Glaxo Wellcome, Inc. in Research Triangle Park.

In past Buyer's Scorecards, PowerBuilder placed first or second in the satisfaction ratings. Its scores tended to closely match Visual Basic's. Its current scores are still mostly positive but aren't in the same class as Visual

 No compromises. No incremental advancements. Just one huge leap. Introducing the Sun™ Ultra™. The most powerful workstation you can get. From the inside out, it has been re-architected and re-engineered to completely redefine computing. The most efficient convergence of CPU, networking, graphics and I/O technology impossible to find anywhere else. So don't look to SGI, don't call HP, and forget DEC. If you want supercomputing class performance from a desktop machine, there's only one place you can get it—Sun Ultra. Best of all, it costs only a fraction of what you'd pay to kludge a similar solution with anyone else. So go on. Push the envelope. Go Ultra. For information about our competitive trade-in program*, contact us at <http://www.sun.com> or 1-800-786-0785, Ext. 380.

Client/Server Development Tools

Java needs time to mature

By Kevin Burden

Does Java deserve its hype? Sure, users say. But since it's the only language that does what it does, users are willing to accept some of its idiosyncrasies.

Java is Sun Microsystems, Inc.'s object-based development language that lets developers build applications that can be circulated over the Internet and run anywhere in a highly distributed network.

Java applications are platform-independent, but differences between Java and Netscape Communications Corp.'s Netscape browser prevent applications from looking the same across all platforms.

"Run our Wall Street [World Wide Web] page on a Windows 95 box [with Netscape], and it will look different than it does on a Sun Solaris system," says Scott Milener, CEO of BulletProof Corp. in Los Gatos, Calif. The problem, according to users such as Milener, is rooted in Netscape's interpretation of the Java language.

And Java development tool kits are very primitive, users say. But for those who consider the tools completely useless, building their own tools is an acceptable alternative, "if that is what it takes to use Java," Milener says.

Four Java developers were asked to rate their satisfaction with the lan-

guage in several areas. The developers' firms include BulletProof, Strategic Technology Resources, Century Computing, Inc. and Mitsubishi Electric Corp.

Ease of use

Learning Java is easiest for C++ programmers, since Java essentially is C++ without some of the hazardous functions that get developers in trouble — pointers, for example.

Experience with C++ syntax helps developers, but knowing the fundamentals of object-oriented programming is a definite prerequisite, according to Larry Podmolik, director of technology at Strategic Technology Resources in Chicago. "Learning syntax is one thing; grasping entire concepts is quite another," he says.

The biggest obstacle for everyone who wants to learn Java is the industry's lack of experience with it. Milener says his learning curve was quite steep for the first few months. There were no training classes or experts with whom to consult. "We just learned by trial," he says.

Java is easier to learn than C++ because Sun included only those functions that are absolutely necessary. "C++ has every function you could want, but you have to learn them all, too," Podmolik says. But there are

some functions that developers sorely miss in Java, including templates. With templates in C++, developers can create families of related class files by writing the class only once. In Java, each class file has to be written individually.

Besides being functionally lighter, Java is easier to use because of its modular building style, which makes team development more manageable and application changes less dangerous. "Bugs only affect the module they are in, so it's impossible to screw up the rest of the program by making changes or adding functionality," Milener says.

Development Tools

The Java Development Kit from Sun was adequate for two of the users, but the other two said they needed to build their own tools.

"Its debugger is horrible," Milener says. He says he developed his own tool set after testing some stock sets. "Same with Borland [International, Inc.] Java tool kit — it's downright unprofessional," he says. "It looks like they rushed it out the door." None of the users had tested Symantec Corp.'s tool kit, Espresso.

Everyone agreed the compiler included in the Java Development Kit worked well. "It's more stable than

most production C++ compilers we've used," said Steve Clark, software engineer at Century Computing in Laurel, Md. Java code is compiled for efficiency, and it's done so that it won't be specific to any system. Java applications remain platform-independent in this way. Podmolik says he misses having a drag-and-drop tool for building graphical interfaces when using Java vs. more mature environments. Java screens are designed by writing code.

But third-party tools such as Factory from Rogue Wave Software, Inc. in Corvallis, Ore., are expected to help.

Application Performance

The four developers said they are satisfied with the performance of their Java applications but that there is still room for improvement.

"Performance is fine for interactive GUI applications, but Java isn't good enough for high-volume servers right now," Podmolik says. It won't be ready until a just-in-time compiler is released, he says.

The download time for Java applets needs a lot of attention, users say. The time it takes to download a Java application depends on a network's bandwidth, "but no attention has been given to compressing the information before it comes over the wire," Milener says.

INTRODUCING YOUR NEXT STEP IN CLIENT/SERVER

Taking the next step in client/server can be tricky. You need larger, more scalable applications. But which architecture will you use? How will you keep up with emerging Internet technologies? How will you make it all work together?

Prepare for your next step with the new Centura™ family of products from Centura Software Corporation (formerly Gupta Corporation). Centura products are not only scalable, Internet-enabled, and open, but also flexible enough to support any application architecture.

SCALE UP. Tackle bigger, more demanding applications. Work with more developers, more databases, more users.

REACH OUT. Move beyond traditional corporate networks to embrace the Internet. Create applications that enhance your business.

CONNECT IT ALL. Unite disparate databases and integrate mobile users. Make all your data and applications work together.

Centura Software Corporation solutions have been proven by more than 100,000 developers and more than a million users. Now we're ready to help you step nimbly into the future of client/server.

In Depth

Is OOP right for enterprise IS?

© 1996 Sprint

By John A. Strand III

YES!

Object-oriented programming (OOP) is not only viable for building enterprisewide applications — it's preferable. As a matter of fact, at Sprint, we're re-engineering our entire enterprise to be object-oriented.

If you ever used Lincoln Logs, Legos or Tinker Toys when you were a child, you understand object orientation. Using Lincoln Logs, you could build a cabin, dismantle it and reuse the components to build a fort. Prefabricated parts were the heart of the Industrial Age; prefabricated objects, components and software-integrated circuits are the heart of the Information Age. Without them, software development can't move forward as a healthy, thriving entity. It's amazing that these simple concepts can't be grasped, because they are intuitively obvious.

At Sprint Corp., not only are we using OOP to build new enterprise-wide applications, but we're also distributing and sharing objects enterprise-wide via object request brokers — such as San Diego-based Expersoft Corp.'s PowerBroker — to dispel our legacy nightmare with a distributed, heterogeneous information infrastructure. This gives us the ultimate vendor leverage — because we have no proprietary dependencies — as well as object interoperability with our partner enterprises.

Objects have many ramifications for information systems throughout the enterprise. Several facets of OOP require a fun-

Yes, page 102

Strand is director of technology planning and integration at Sprint Corp. in Overland Park, Kan.

SOUND OFF!

AT ISSUE:
Object-oriented programming is billed by some as the answer to corporate America's software development problems. OOP promises to help companies save time, resources and money, they say, by quickly

creating fully functioning enterprise applications from predefined autonomous objects. But skeptics point to steep learning curves, dashed hopes and compatibility problems. Who's right?

© 1996 Sprint

By Martin A. Goetz

ABSOLUTELY NOT

WHAT are some of the characteristics of "classic" OOP? The OOP implementation is in an OOP language such as C++ or Smalltalk. An object's logic and variables are encapsulated together. The OOP implementation uses the top-down hierarchical model for defining object classes and dependencies. Business logic is put into individual methods in a class hierarchy. The objects inherit functionality higher in the hierarchy.

This isn't the profile of a paradigm that will succeed. Don't get me wrong. I'm all in favor of finding new and productive ways to build IS applications. Heaven knows we need them. But OOP isn't the answer. For every OOP success story you've read, there are 50 failures that have been shoved under the computer room floor. For every IS Cobol professional who has successfully adapted to OOP, there are 50 others who, after months of training and trying, still don't understand how to apply OOP theory successfully.

Just last month, *Computerworld* ran a story on Page 1 that de-
Absolutely not, page 102

Goetz is president of Goetz Associates in Teaneck, N.J. As founder and past president of Applied Data Research, Inc., he has been an advocate of new application development technology for more than 30 years.

Sound Off!

YES!

CONTINUED FROM PAGE 101

damental change in the way large companies approach software. It's important to understand these aspects of OOP and how they mandate both cultural change and a difficult but achievable paradigm shift throughout the enterprise.

Encapsulation is a key aspect of OOP that brings all information pertaining to a particular real-world object, such as a customer, into a single "digital master" object. This master object resides in a virtual object warehouse that is accessible by applications throughout the enterprise. This encapsulation represents an enormous cost savings and increase in efficiency on maintenance costs alone, not to mention improved accuracy and better customer service.

By contrast, a legacy system may keep some information about a customer in one database and other information about the same customer in another database.

Additionally, the same information about a given customer is typically in more than one database, but each may contain mistakes. To make matters worse, the databases are sometimes proprietary or homegrown, difficult to integrate and require large maintenance staffs.

Encapsulation also prevents brittle "rat's nest" code by reducing assumptions, thus supporting rapid changes to applications. New tools are available, such as one from Apertus Technologies, Inc. in Eden Prairie, Minn., that we're using to perform automated mappings from flat or relational databases to objects. These tools provide ways to achieve legacy database migration sooner rather than later.

One of the most often noted advantages of OOP

is software reuse. It's a benefit of huge proportions because it slashes development time and, therefore, costs. Where software development managers sometimes go wrong is in selling reuse as a silver bullet. These managers often are unwilling to schedule the extra time required to create reusable code.

True object-oriented languages such as Smalltalk and Java support reuse by means of inheritance. If you've already written the code for a general class of "ball" objects, you don't have to rewrite that code for subclasses such as "baseball" or "golf ball." You write only the code that's different for each subclass—"has seams," for instance, or "has dimples." Due to inheritance, reuse appears as a by-product during normal development in OOP.

When IS is chartered with building a new system, typically there's deep reluctance to decipher someone else's cryptic legacy code. Instead, programmers write new code or pile another layer on top of the old stuff, compounding the problem.

Contrast this with object-oriented programmers. The really good ones are part plagiarist, part artist, part systems integrator. They take objects from anywhere, reuse them, modify them if necessary and integrate them at blinding speeds. But to take full advantage of their work, a corporation needs an "object czar" who coordinates their efforts.

So why has OOP failed to gain more widespread acceptance? One reason is that it presents a serious threat to traditional IS organizations. OOP's main detractors are typically those who

stand to lose the most: the control-centric empire builders who are evaluated on the size of their staffs, not on their savings to the enterprise.

Another reason is the difficulty or lack of commitment that some organizations encounter when trying to make the paradigm shift to objects. It's just this paradigm shift that OOP naysayers raise as a cause for avoiding OOP. Don't listen! This fundamental change is needed to produce significant change, and it takes time. When the promises of OOP aren't realized right away, managers blame the technology, cancel all further classes and abort halfway through the paradigm shift. Then the IS old-timers rejoice, for their jobs and empires are secure once again, and the perceived pain of learning something new goes away.

In the near future, all software will be object-oriented. The trend is obvious, with the growth of OOP languages such as Smalltalk, C++ and now Java.

The reason for this movement is that software objects mirror the real world. Records, fields and structures are computer-oriented; objects are people-oriented. After you understand objects in software the way you played with objects as a child, OOP becomes obvious.

Do you want to be on the trailing edge of this paradigm shift while your competitors are using objects to consistently maneuver inside your development cycle? We constantly hear the question, "Are objects ready for prime time?" Hell, they've been ready for years. The question is, when will IS departments be ready to embrace them? ■

ABSOLUTELY NOT

CONTINUED FROM PAGE 101

scribed Duke Power Co.'s failure to apply OOP effectively [CW, Feb. 26]. The Charlotte, N.C.-based utility abandoned its new customer information system and lost a substantial investment in the project. In the article, Oracle Consulting's Steve Perkins, who oversaw the project, acknowledged, "The object-oriented methods and tools proved not to be scalable to a problem of this size and complexity." The story went on to say, "One of the biggest problems is mapping software objects to relational database management systems."

Duke Power's experience is far from isolated. Stamford, Conn.-based Gartner Group, Inc. identified OOP's shortcomings in a 1995 report. "Object orientation is a notoriously difficult technique to master," it read, "and beyond GUI management, it is unsuitable for large, complex systems involving scores or hundreds of relational tables and for large development groups."

Just what is the problem OOP is trying to solve? For the past 40 years, the goal in IS has been to build and maintain viable enterprise applications that increase productivity, reduce maintenance costs and quickly respond to changing business needs. We've worked hard to accomplish this and gained a lot of experience along the way. But classic OOP throws this out the window. As even die-hard OOP proponents acknowledge, OOP requires a new mind-set and a unique way of

thinking about the design and programming of an application.

OOP is—or should be—only a means to the end of building better enterprise IS applications. But it fails to deliver as a true advancement. Look at the evolution that took place in the past four decades: machine code, assembly language, Cobol, fourth-generation languages (4GL). Each step represented a true advance in the technology. Each successor language was easier to learn and use. In this context, it's easy to see that OOP is neither the next step nor an advance.

Cobol, like machine code and assembly language before it, should be retired with dignity. To replace it, Cobol programmers need objects that are easy to use and flexible enough to meet IS enterprise application requirements.

So what's the solution? It's right in front of us: enterprise 4GLs, which already are delivering the productivity gains so desperately needed. Enterprise 4GLs are easy to use and learn; use only object technology that is compatible with the building of large, complex IS applications; and have

special facilities for building and maintaining distributed client/server enterprise applications.

Choosing an enterprise 4GL over a classic OOP paradigm can, therefore, represent a critical decision for success. Unlike Duke Power, Fairfax, Va.-based Mobil Oil Corp. rejected classic OOP as a basis for building a large application. Instead, it opted to build this new client/server application using Ronkonkoma, N.Y.-based Passport Corp.'s Passport, an enterprise 4GL that marries object and relational database technologies. The decision paid off. Passport was easily learned and quickly employed by existing Cobol staff. The application is operationally efficient and easily modified to meet changing business needs.

The three basic reasons classic OOP will fail are the following:

- The prerequisite training, which requires a new mind-set, is too extensive and complicated.
- Classic OOP theory is fatally flawed for applications that use relational database technology.
- OOP languages and methodology can't accommodate the ever-changing requirements of business and IS.

Classic OOP isn't the wave of the future for enterprise IS. Let's focus our attention instead on improving productivity and making each advance one that makes life easier—not more complicated. Enterprise 4GLs are a much safer bet with a much higher payback. ■

STRAND:

"OOP's detractors are those who stand to lose the most: control-centric empire builders evaluated on the size of their staffs, not on their savings to the enterprise."

GOETZ:

"for every OOP success story you've read, there are 50 failures shoved under the computer room floor."

Attack, Sustain, Decay, Release

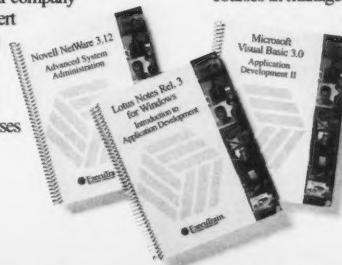

You've Been Speaking English Your Whole Life. Tomorrow You Have To Be Fluent In “ΟΥΤΟΚΟΨΥ”

Now You Know What Your Application Developers Feel Like.

Suddenly, your developers have to be experts in client/server development, networking, databases, communications, groupware and other advanced technologies — all of which require new “languages” or new ways of thinking.

How do you keep your technical people current and your company competitive? With expert technical training from Executrain.

Our curriculum includes introductory through advanced courses

in today's technical software including Microsoft Access®, Windows NT™, Visual Basic®, Novell NetWare®, Lotus Notes®, and others.

They're taught by industry-certified instructors who understand how technology functions in the real world. And we've designed our technical courses in manageable one-, two-, and three-day segments to help you maintain your busy development schedule while helping your IS personnel prepare for industry certification exams.

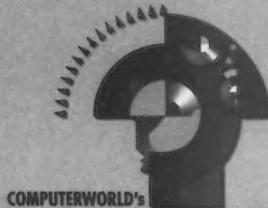

As part of Executrain's Total Training Solution,™ our technical training can keep your developers fluent in today's changing language of technology. And that translates into a big payoff in productivity.

WEEK 10 OF 19

**TechnoTrivia**

How to play COMPUTERWORLD's TechnoTrivia

1. Look for the COMPUTERWORLD TechnoTrivia icon to find the answers (planted throughout this issue) to the TechnoTrivia questions listed on this page.
2. Enter the page number containing the correct answers via COMPUTERWORLD's Web site on the Internet:
<http://www.computerworld.com>
3. On the Web site Entry Form, identify the page number in this week's issue of COMPUTERWORLD where the correct answer to each TechnoTrivia question appears.
4. Or you may enter by fax using the Fax Entry Form below.

Trivia questions and answers provided and/or verified by Christopher Morgan and The Computer Museum.

**TO FAX IN YOUR ENTRY, COMPLETE THIS FORM
AND FAX THE COPIED PAGE TO:**

1-402-572-6410

Correct Answer on Page #

1.	_____
2.	_____
3.	_____
4.	_____
5.	_____

WIN A BAHAMAS CRUISE FOR TWO!

5 GRAND PRIZE WINNERS
A Bahamas Cruise for 2...a loaded laptop...
and a shot at \$5,000 in cash!

Win a 4-day cruise to the Bahamas for two aboard Carnival Cruise Lines. While onboard, all five winners will be awarded a state-of-the-art PC Laptop with software — plus a treasure map with all the clues you need (if you're really quick) to solve the ultimate TechnoTrivia puzzle and earn a \$5,000 cash reward!

3 FIRST PRIZES

A Sony CD-ROM Discman® PRD-150 Player

A fully portable multimedia solution for laptop computers! A full-feature CD-ROM player with PCMCIA Type II card plus stereo headphones. Photo CD and Windows compatible.

5 SECOND PRIZES

A Sony CCD-PC1 Computer Color Video Camera

The complete video-conferencing and audio-video capture setup! A high-resolution color video camera on a 10" flexible arm with built-in microphone, manual focus control for close-ups and an iris control for lighting adjustments.

Grand, First and Second Prize Winners will be announced by July 15, 1996.

1 Sony Magic Link® Personal Communicator

Use smart messaging to help manage all your electronic communications — fax, e-mail, phone or pager.

5 Dunkin' Donuts "TechnoTrivia Tuesday" Coffee Breaks

Each Tuesday five winners and their associates (up to 20 people) will receive Dunkin' Donuts gift certificates for 3 dozen donuts, a Dunkin' Donuts coffee thermos, a pound of ground coffee plus an engraved TechnoTrivia plaque.

Please pass along this issue of COMPUTERWORLD to an associate after you have finished playing the game.

This Week's TechnoTrivia Questions

1. What nationally syndicated comic strip contains the cartoonist's Internet E-mail address?
2. What rock group sued a computer company for using the winged toaster image from the cover art of their album?
3. In computer terminology, what does the acronym "ASDR" stand for?
4. How much money did each of the two original founders invest to start Atari Corporation?
5. What was Microsoft's original name for Windows?

NO PURCHASE REQUIRED. This offer is governed by a complete set of Official Rules, published on COMPUTERWORLD's web site at <http://www.computerworld.com>. To receive a written copy, send an SASE to COMPUTERWORLD's TechnoTrivia Rules, P.O. Box 4051, Marlborough, MA 01747. Find the five correct answers to the TechnoTrivia questions in each issue and complete the entry form by entering the page number where you find the correct answer to each corresponding question. Play off 19 weeks; and increase your chances of winning a weekly prize or one of 13 exciting final prizes. One entry per person per week. TechnoTrivia is open to residents of the U.S. 18 years of age or older who are 18 professionals — except employees of companies that manufacture, distribute or resell computers and computer related equipment and their families or immediate family members of International Data Group, Inc.(IDG), their officers, subsidiaries, their advertising and production agencies as well as other publishing companies serving the computer or high technology industry. Weekly and final prize winners will be selected at random from among all those submitting complete, correct entries. Sweepstakes drawing will be conducted by MILLHOUSE MCGAIGE, INC., an independent judging organization, whose decisions are final in all matters relating to this offer. Weekly entries must be received by 11:59 pm on Thursday following the publication of each issue of COMPUTERWORLD. All entries eligible for the Final Prize must be received by 11:59 pm, Friday, June 3, 1996. Void where prohibited.

Computer Careers

Leaders of the Pack

The right packaged software skills can put you at the forefront of the client/server scramble

BY LESLIE GOFF

Do "real programmers" use Visual Basic? You bet! Experience with off-the-shelf, or packaged, client/server software will continue to differentiate IS professionals for at least the next three to five years, managers and recruiters predict.

Companies as diverse as Baxter Healthcare Corp., J. B. Hunt Transport, Inc., Marine Optical, Inc. and Steelcase, Inc. are hiring full-time information systems staff and contractors for core systems development projects. These companies are looking for candidates who understand general client/server concepts and connectivity issues. And they are also screening resumes for key packaged software skills.

"The more strategic development is happening in client/server — that's where all the new investment is," says Steve Van Kuiken, director of new product development and SAP project director in the information technology division of Baxter Healthcare in Deerfield, Ill. Van Kuiken says his own career has been fueled by his work on client/server development projects.

"I think a lot of hardcore developers view packaged installations as a bad thing because they think you don't get a chance to do real development work," Van Kuiken says. "But no one package fills all of a company's needs, so you always need some custom development. There are still opportunities to build your development skills in packaged installation projects, so it's good to have those packages on your resume."

Front-end development tools such as Microsoft Corp.'s Visual Basic and Visual C++, Borland International, Inc.'s Delphi and Powersoft Corp.'s PowerBuilder are still atten-

"These skills allow you to be very entrepreneurial. You can work for consulting firms, outsourcers, Internet-related start-ups — they're all hiring client/server people. They may not be Fortune 100 companies, but there's a lot of opportunity outside that scope."

*—Kathy Brittan White,
CIO, Baxter Healthcare*

tion grabbers on a resume. But the well-publicized demand for expertise in integrated enterprise-wide client/server packages, such as SAP AG's R/3, Oracle Corp.'s Oracle Financials and PeopleSoft, Inc.'s financials family is stealing much of the thunder. And database developers experienced in products from Oracle, Sybase, Inc. and Informix Software, Inc. also remain in high demand, as do those with skills in Computer Associates International, Inc.'s CA-Ingres and related products such as Microsoft's SQL Server.

Other hiring factors include a company's ongoing projects, the competition for talent and the ability to draw candidates to sometimes remote, lesser known areas of the country.

Lowell, Ark.-based trucking company J. B. Hunt, for example, is nestled in the Ozarks in the state's northwest region. The company sometimes has trouble attracting skilled client/server professionals, despite its advanced technology development projects and big-name

HOT AND COLD SOFTWARE SKILLS

IS managers report the following demand for packaged client/server skills

DEMAND LEVEL	LANGUAGE SKILLS	DEVELOPMENT TOOLS	OPERATING SYSTEMS
HOTTEST (high demand/niche market)	• Smalltalk	• Gupta SQL Windows	• Solaris
HOT (high demand/mainstream market)	• C++ • C	• PowerBuilder • Oracle Developer 2000 • Visual Basic	• Windows NT • AIX Workstation • MVS • HP-UX
WARM (medium demand/niche or mainstream market)	• Objective C • MicroFocus Cobol	• JYACC JAM • Uniface	• OS/2 • Windows
COOL (low demand/mainstream market)			• DEC VMS • DOS
COLD (low demand/niche market)		• NextStep • Dynasty • Forte	• OSF/1 • Apple System 7.5

Source: Computerworld's 1991 "Skills Survey"

corporate neighbors such as Tyson Foods and Wal-Mart Stores, Inc. As the company seeks to increase its 140-member IS staff by 15% this year to accommodate critical transportation logistics projects, IS managers say they will look for transferable skills more than specific experience.

Kay Palmer, vice president of applications, and Tracy Black, director of applications development, say they will require a minimum of two years' experience in IS, including at least one project that involves relational database programming and connectivity. Anything else will be nice to have, they say.

At eyeglasses distributor Marine Optical in South Easton, Mass., the need is for a few good Microsoft Access professionals. Responsibilities will involve writing end-user applications that pull data from back-end databases, which are developed in Progress, a SQL-based fourth-generation language.

Search under way

MIS manager Anne Marie Fallon says Marine Optical is under pressure to find staff for global electronic data interchange applications, Internet projects and other customer-oriented systems development.

"We're seeing more development demand," Fallon says. "Many of our retail customers, like Pearle Vision and Wal-Mart, already have sophisti-

cated retail systems in place, and they expect a lot from their vendors. So as we bring in more retail customers asking for more technology-based services, we have to be able to respond."

Office furniture maker Steelcase in Grand Rapids, Mich., and Baxter Healthcare are both in the throes of R/3 implementations. J. B. Hunt will choose a client/server-based financial package this year. But even at these companies, IS managers say they're looking for a certain attitude over credentials.

"Participation on specific projects isn't nearly as important as attitude," says Diane Schwartz, manager of financial systems at Marine Optical. "The open-minded, flexible analyst moves a lot further in this environment than their less open-minded peers."

Possessing such skills also provides greater opportunities for self-employment, says Kathy Brittan White, CIO at Baxter Healthcare.

"These skills allow you to be very entrepreneurial. You can work for consulting firms, outsourcers, Internet-related start-ups — they're all hiring client/server people," Brittan White says.

"They may not be Fortune 100 companies, but there's a lot of opportunity outside that scope."

Mapping Out Career Paths for PROGRAMMERS

His own fast-paced career gives author Gene Wang insights for others

BY ALAN R. EARLS

If you want to figure out how to better manage your career, land on your feet when your company downsizes or ride the next big trend, there aren't many resources out there.

According to Gene Wang, a former executive vice president of applications and development tools at Symantec Corp., there haven't been any books targeted at the career-planning needs of computer professionals. About the only choice has been the one-size-fits-all *What Color Is Your Parachute?*, now in its gazillionth printing.

With that information gap in mind, Wang set out to develop a resource for at least one segment of the industry. The result: *The Programmer's Job Handbook: The Skills You Need for Long-Term Job Security and Programming Success* (Osborne/McGraw-Hill, 1996).

Wang says he has tested a lot of the book's career advice himself and had positive results. "I had a lifelong ambition to be a CEO by age 40," says Wang, 38. Recently, he became president and CEO of Computer Motion, Inc.

Wang says the experiences he accumulated from his start in the field — as a programmer at Wang Laboratories, Inc. (no relation) — provided grist for writing the book.

"I saw their demise from the inside," Wang says. "I started out working on a whole operating system by myself, but by the time I left, I had a whole department, and we worked on practically nothing."

Wang then was involved in an artificial intelligence start-up called Gold Hill, Inc. in Cambridge, Mass., which went "from zero to \$5 million" in a brief period of time before "hitting the wall."

"I had learned that it was important to understand the big picture, so I got out of Gold Hill before the end," Wang says.

Learning curve

After a productive career move to Borland International, Inc., where he led the development of C++, Wang moved to Symantec to work for Gordon Eubanks, "the best boss I ever had," he says. Unfortunately, the move led to a lawsuit by Borland, which claimed he had taken trade secrets. "It was a very messy thing, but I learned to be more careful when exiting a company," Wang says.

Capsizing those lessons and many others in a manuscript took Wang about nine months. "The publisher approached me and asked me to write the book, and I agreed to do so because I want-

ed to help programmers find better careers," he says.

"In the book, my first point is fairly obvious, but very few people do it: Have a plan for your professional development," Wang says. "It is like New Year's resolutions but focused just on your job."

Wang also identifies the seven most crucial skills for successful programmers. "Some are so obvious they are almost insulting — like not putting bugs in your programs. I learned that from my manager at Borland, and it really is true. The programmers that rise to the top are very methodical and make sure they don't have bugs in their code," Wang explains.

Learn to adapt

Wang says it's also important to develop skills in growth areas and to embrace change when it comes along. "I know lots of great people who are pigeonholed maintaining some sort of mainframe accounting package," he says.

Of course, getting the opportunity to work on the right kind of technology also is a matter of finding the right company in which to work. To that end, Wang says the best part of the book is the Dilbert Index — a rough guide to predict how good a company will be to work for.

"I asked Scott Adams [creator of the *Dilbert* cartoon series] how to figure out if you are at a good compa-

ny," Wang says. Adams, in turn, proposed a general index.

If you go into a company and you see lots of *Dilbert* cartoons taped on the walls, you are in big trouble, Wang says: It's a company that is "too screwed up to be embarrassed by its flaws."

On the other hand, if you go to a company that has no *Dilbert* cartoons adorning the walls, "it is probably somewhat screwed up because it has no humor and can't acknowledge its flaws," Wang says.

The key, Adams told Wang, is to find a company with just the right number of *Dilbert* cartoons decorating its walls.

Wang's book includes some *Dilbert* cartoons, and Wang said he hopes they help motivate readers to manage their careers. He also says he believes the book offers valuable role models of successful programmers and what they do right, insights about key technology trends and solid information about compensation practices.

"Whether I have succeeded or not will be determined by reader feedback," Wang says.

Earls is a freelance writer in Franklin, Mass.

Book review: Guidebook to the perfect programmer

Gene Wang offers an invaluable look at the keys of a successful programming career

The Programmer's Job Handbook: The Skills You Need for Long-Term Job Security and Programming Success
By Gene Wang
Osborne/McGraw-Hill,
Berkeley, Calif.; 260 pages; \$24.95

In keeping with the format of its other computer titles, Osborne has a "skill level" box on the cover of *The Programmer's Job Handbook*. It says simply, "For every programmer." Indeed, every programmer and person with a career linked to computer technology should peruse this well-organized, highly useful handbook.

As the title implies, Wang covers the basics, including defining different job titles and career paths. He also offers advice about effective resume writing and provides a helpful mini-directory of promising software companies in which to work.

More importantly, Wang serves up many suggestions about achieving success as a programmer and managing projects and software life cycles.

He also includes lots of tips and resources for using the Internet and the World Wide Web to help you find a job.

At the heart of Wang's book are his "seven skills of successful programmers." These include being sure to underpromise and overdeliver, not putting bugs in programs, being passionate and hardworking, "knowing what you don't know," being a team player and following through. His seventh critical skill, keeping up with emerging technologies, is fundamental, he says.

Where you do what you do and in what environment you do it is perhaps most crucial to career success. Wang reviews and analyzes most of the major platforms, operating systems and languages and offers his view of their likely longevity and potential as career boosters. He also repeatedly stresses the need for programmers to focus on the big picture so they can better discern future trends that may affect their careers.

— Alan R. Earls

Computer Careers

Make a global impact on client/server technology.

Microsoft gives people access to a whole new world of thinking and communicating. Our Consultants provide Fortune 500 clients with some of the industry's most innovative client/server solutions. They're backed by unparalleled resources and the chance to leverage advanced technologies, including the Internet and online services. If you have 5+ years SDLC/project management/consulting experience, why should you settle for less?

Client/Server Consultants

Microsoft Consulting Services

Network Architecture: Requires strong large scale LAN architectural experience with Windows NT™ Server, Windows® for Workgroups, LAN Manager or other advanced network OS. Knowledge of Systems Management Server, TCP/IP, gateways, bridges, routers, network diagnostic tools, mail/messaging systems, RDBMS and GUI application development preferred.

Messaging Architecture: Requires demonstrated experience in the design/ implementation of large mail/messaging systems; multi-platform integration; and strong knowledge of Microsoft Mail/ Exchange or other advanced mail/messaging systems. Experience with LAN architecture, messaging/standards/protocols/ gateways such as X.400, X.500 and/or SMTP, MAPI and RDBMS design and development preferred.

Windows Application Development: Requires strong Windows/Windows NT development experience using C/SDK, C++, Visual C++™/MFC and/or Visual Basic®, and demonstrated GUI application, design and development experience. RDBMS and/or LAN design/implementation preferred.

Database Development: Requires significant logical and physical design experience with SQL Server™/other advanced RDBMS. Knowledge of database performance tuning, OLE, ODBC, network architecture and GUI application development preferred.

A Bachelor's degree in Computer Science or other technical discipline and Microsoft Certified Professional status preferred for all positions. Opportunities are available in most major cities nationwide.

Indicate Recruiting Dept. CWLD396 and mail, fax or email (.txt format) your resume today. For more information look to <http://www.microsoft.com/jobs>. No phone calls please. We are an equal opportunity employer and support workforce diversity.

ENVISION
A ROAD THAT NEVER ENDS

At PLATINUM technology, inc., you'll find an endless spectrum of career opportunities. Here you are encouraged to go wherever your talents, interests and innovation will take you. There are no limits. We are a leading provider of software solutions for managing the open enterprise environment with openings ACROSS THE COUNTRY for the following:

SALES ENGINEERS

Our SALES ENGINEERS are the key element to our sales and marketing efforts. They work extensively with customers throughout the sales cycle, supporting the most sophisticated client/server products available on the market. Our Sales Engineers are strong technical specialists who can solve complex problems and who also possess the communication and presentation skills necessary to interact with prospective customers. Requirements include strong technical background in RDBMSs, UNIX and/or Windows NT, excellent oral/written communication skills and a willingness to travel approximately 50%. We offer an attractive base salary and an aggressive bonus plan for this position.

SOFTWARE ENGINEERS

Our product lines are undergoing significant new development to keep up with their exponential growth. Our SOFTWARE ENGINEERS focus on implementing new features, enhancing the user interface and deployment across all enterprise platforms. Strong C, C++ programming background in UNIX and/or Windows NT for cross-platform development is required. Microsoft Foundation Classes (MFC) and experience with Object-Oriented Database Management Systems, CASE tools or formal Object-Oriented Analysis and Design Methodologies are also desirable.

PLATINUM offers a unique working environment and unlimited career growth opportunities and excellent salaries. Our benefits package includes medical, dental, vision, life, short/long term disability, 401(k), tuition reimbursement AND a casual dress atmosphere! For consideration, please mail or fax your resume, indicating position and location preference, to:

Issue Date: June, 1996

Close : April 17, 1996

1-800-343-6474 x8201

Systems Engineer (Industrial Applications) - Design, code & develop database client/server systems for various industrial, manufacturing & financial applications. Must have extensive requirements analysis based on user's business needs, data modeling using CASE TOOLS, development & implementation of client/server systems including Purchasing, Order Entry, Inventory, Bill of Material, General Ledger, Accounts Receivable, MRP, Mfg. Shop Floor Control etc. (entire MRP II suite) using SYBASE & ORACLE on various client server platforms. Projects may frequently involve the use of Object-Oriented Analysis & Design methods. Some projects are performed on client sites at various geographic locations. Must have a Master's degree in Industrial Engineering. Must have completed courses in each of: 1) Modern Manufacturing Systems; 2) Advanced Production Control; 3) Manufacturing Automation; 4) Database Systems; & 5) Software Engineering. Must have one year of experience in the job offered or as a Software Engineer. Experience as a Software Engineer must have included designing & developing MRP II application suites using SYBASE & ORACLE & CASE TOOLS (ORACLE CASE, Software Through Pictures). Must also have experience using Object Oriented Analysis & Design methods as well as experience implementing products on client sites. 40hrs/wk, 9:00am-5:00pm, \$35-\$400/hr. Must have proof of legal authority to work permanently in the U.S. Send resumes to Illinois Department of Employment Security, 401 South State Street, #3 South, Chicago, IL 60605, Attn: RUTH DANIELS, Ref. V-IL-1428. NO CALLS, NO ENVELOPES PLEASE. SEND 2 COPIES OF BOTH RESUME & COVER LETTER.

SOFTWARE/SYSTEMS ENGINEER required. Design, code & implement Client/Server based software on Windows platforms using expertise with Object Oriented Design & Analysis, Programming & CASE tool technology. Design, GUI's & perform Database Management Systems Administration using Microsoft SQL server & DBA development tools. Optimize system performance using queuing theory, simulation techniques & experience with Novell Netware & local balancing in a distributed processing environment. Must have a Master's Degree or its equivalent required in Computers or Engineering, plus 1 year experience in the job duties described above. Experience required include one year with C/C++ programming & with the writing of customized network software using TCP/IP, OSI protocols & X.25 & LAN/WAN protocols. Must have proof of legal authority to work in the U.S. Salary - \$40,000/year for a 40 hour work week. Oracle: Where data are based

Oracle does more with data than anyone else. We've grown to be a \$3.5 billion company, the world's largest independent supplier of database software and tools, and a leading developer of information management software and services. In the US, we have increased our staff by more than 40% in the last year. Worldwide, we have

more than 19,000 employees, and thousands of customers in more than 90 countries.

But we don't intend to stop there. We're constantly finding new ways to manage, access, network, and leverage data. Starting new divisions. Introducing new products. And offering opportunities like these:

Sales Consultants

Over the next several months, we'll be interviewing and hiring the very best to fill new pre-sales and sales management openings locally and in major cities across the country.

We're looking for people with a successful track record of 5+ years pre-sales demonstration to support sales, with specific experience in one or more of the following: applications—Manufacturing, Distribution, HR and Finance; technologies—database, tools, OLAP, new media, Internet. Oracle and/or industry experience preferred along with a technical degree. Some entry-level positions for college grads (BSCS) interested in sales consulting are also available.

Equal talent will always get equal opportunity.

Oracle Corporation offers generous compensation and unparalleled benefits. For confidential consideration, send your resume to: Sales Staffing, Dept. #31896CWN, Oracle Corporation, 500 Oracle Parkway, Box 659314, Redwood Shores, CA 94065. Fax 415-413-3648. Better yet, e-mail in ASCII text to: pcoowell@us.oracle.com.

SPEARHEAD
System Consultants (US) Ltd.

99 Seaview Blvd., Suite 340, Port Washington, NY 11050

Computer Careers

At ISSC, a subsidiary of industry leader IBM, we're doing more than exploring new technologies and solutions. We're implementing them for clients around the globe. And as a member of our PeopleSoft Consulting Practice, you can contribute as much to tomorrow's innovations as you do to your own career. If you're ready for the level of challenge and opportunity only ISSC can offer, consider one of the following opportunities in various locations across the United States:

- Technical Consultants
- Systems Analysts
- Database Specialists
- Functional Consultants
- Project Managers

In addition to excellent compensation, these positions offer the opportunity to advance your career in the kind of environment only available from the industry leader. For immediate consideration, forward your resume, indicating Job Ref. #IBMRAZ169 on resume and all correspondence, to: IBM Staffing Services, D/IDPA, B/051, P.O. Box 12195, Research Triangle Park, NC 27709; FAX: 1-800-262-2494; e-mail: jobs@vnet.ibm.com. Visit our website at <http://www.empl.ibm.com/careers.htm> to learn more about our current openings. ISSC is committed to creating a diverse environment and proud to be an equal opportunity employer.

An IBM Subsidiary

ISSC PeopleSoft Consulting Practice

You will become team members of a consulting group implementing PeopleSoft applications for clients across a wide spectrum of IBM and non-IBM platforms. Recent experience implementing PeopleSoft's HRMS, Financial or Distribution Application suites is required; experience with the following tools is desired. Frequent travel is expected.

- PeopleTools
- PeopleCode
- SQL/SQR
- rVision
- Query/Crystal

Simply the BEST Gets Better

BEST Consulting makes a point of finding professional individuals with the highest level of technical expertise possible. **BEST** empowers individuals to make a difference, to interpret client needs and respond with service that exceeds all expectations.

These positions are located in Salt Lake City, Utah. It is a relatively crime free city, providing many opportunities for those who enjoy the great outdoors (skiing & hiking) and have a family oriented lifestyle.

For the successful candidates we offer a salary commensurate with your experience level and outstanding fringe benefit programs.

Your Thinking Has No Walls. Why Should Your Office?

When you know how to think outside the box, you shouldn't have to sit inside one. Your environment should parallel the solutions you develop — visionary, dynamic and unconfined by traditional ideas about business. You'll find that environment at SHL; it's one of the numerous reasons why we are widely credited with having defined business transformation.

At SHL, an MCI company, our professionals are busy showcasing their considerable entrepreneurial talents and analytical skills on five continents for a diverse Fortune 500 client base resulting in over \$1 billion in sales annually. When you think about it, it's really no surprise that top professionals in the computer services industry have decided to join SHL.

What about you?

Business Transformation through Client/Server Computing

CLIENT SERVER PROFESSIONALS (Los Angeles, San Francisco & Seattle)

BOSTON, MA BASED OPPORTUNITIES

FIDELITY INVESTMENTS® IS THE LARGEST MUTUAL FUND COMPANY IN THE WORLD AND ONE OF THE FASTEST-GROWING FINANCIAL SERVICES COMPANIES IN AMERICA. WE'RE RENOWNED FOR OUR TECHNOLOGICAL INNOVATION AND **FIDELITY INVESTMENTS SYSTEMS COMPANY** IS LEADING THE WAY. WE'VE MADE A SIGNIFICANT INVESTMENT AND COMMITMENT TO SOFTWARE ENGINEERING PROCESS IMPROVEMENT, ENABLING OUR DEVELOPERS TO ACHIEVE COST-EFFECTIVE SYSTEMS DELIVERY WITH IMPROVED CUSTOMER SATISFACTION. IF YOU HAVE EXPERIENCE IN SOFTWARE PROCESS IMPROVEMENT AND WANT TO JOIN A TEAM THAT ENJOYS THE HIGHEST LEVELS OF MANAGEMENT COMMITMENT AND SUPPORT, CONTACT US NOW.

Software Engineering Process Improvement Positions

Software Estimators

JOB CODE: CL1124

Perform sizing and estimating for software development projects involving multiple development techniques and technologies (OO, client/server, and mainframe). Candidates must possess IPUG certification on function point counting. Additional preferred qualifications include familiarity with estimation tools and techniques, experience with software development metrics, and 5+ years' experience in software development.

Methodologist

JOB CODE: CL1136

Evaluate and recommend new development techniques, tools, and practices that will enhance our existing methodology and provide project planning, organizing and management support. Key enhancement areas will include Client Server projects, reusability, and metrics. You will facilitate JAD sessions, lead an internal methodology users group; develop, publish and rollout technical papers; and work with project teams to increase their productivity. You must have a record of success in adapting methodologies, techniques and practices to systems development projects. Project management experience, communication skills, experience with client/server projects, and the ability to sell ideas to others are necessary. Object Oriented project experience a plus.

Director, Project Office

JOB CODE: CL1122

Establish a Project Office Function within Fidelity's software development organization. Coach and consult on project management best practices and lead the implementation of a major, integrated project management tool. Requirements include 5 to 10 years' experience in software development project management, familiarity with project management metrics, and previous experience implementing project management systems.

Project Office Analyst

JOB CODE: CL1135

Provide support to Fidelity's software development organization in the area of project management. Maintain and support project management policies, procedures and practices; assist project managers in learning and effectively implementing the project management policies, tools, and processes as applied through Fidelity's methodology. Required are 3 to 5 years' experience with project management tools. You must possess project manager coaching experience as well as experience with a methodology in a Mainframe, Client/Server, and/or OO environment. Knowledge of Summit/D is a big plus.

Join us today, and be one of the first to discover the future of technology.

ADVANCED TECHNOLOGIES—RTP, NC (DEPT. LL)

Become a member of a world-class team of systems application developers and technical specialists supporting quite possibly the finest software application development toolkit in the world. Opportunities are available for Advanced Technologies Engineers in the following fields:

Middleware: LAN & WAN networking—TCP/IP & SNA—Windows NT, OS/2, UNIX & MVS; C/C++ experience; DCE and/or other middleware expertise a plus.

Client/Server Architecture: Large-scale 3-tier Client/Server application architecture; distributed application design and partitioning; hardware infrastructure capacity planning.

Performance: Planning, measurement and tuning of the infrastructure and application design/architecture for large-scale, distributed processing environments. Environments include Windows NT, OS/2, UNIX & MVS.

CONSULTANTS/SENIOR CONSULTANTS

Seer has customers around the globe using its premier application development technology. Seer Consultants from each of these countries guide them on their client/server journey. This makes our consulting team part of an international network of client/server experts. Seer is seeking prospective consultants with proven application development experience. Professional credentials should demonstrate proficiency in several of the following areas:

- Platforms: Windows NT, OS/2, UNIX, MVS/CICS
- RDBMS: Oracle, Informix, DB2, Sybase
- Languages: C, C++, COBOL, AGL
- Middleware: RPC, Messaging, TCP/IP, SNA, Named Pipes
- Methodology: Information Engineering, OO
- Architecture: Client/Server, application partitioning, GUI design.

Candidates should possess excellent presentation skills, willingness to travel, and a desire to solve business issues with the finest development tools in the industry.

Opportunities currently exist in the following regions:

East (Dept. MD): NY/Connecticut, Boston, Toronto, Atlanta

Mid America (Dept. MI): Detroit, Chicago, Dallas

West (Dept. LL): San Francisco, Los Angeles, Seattle, Vancouver

Latin America (Dept. TS): Mexico, Brazil, Argentina

Seer offers excellent growth potential, comprehensive training, outstanding salaries and competitive benefits. For immediate consideration, please send your resume, salary history and position department number in confidence to: Human Resources, Seer Technologies, Inc., Dept. 8000 Regency Parkway, Cary, NC 27511; FAX (919) 469-1925; e-mail lori@matigate.seer.com; or call (919) 380-5240. Dedicated to workforce diversity.

We've been there.

The graphic features a circular design with the words "TOMORROW'S" at the top and "TECHNOLOGY" at the bottom. In the center, there is a stylized representation of a computer monitor or screen showing a dotted line forming a smiley face. Below the circle, the words "CLIENT/SERVER" are written in large, bold, sans-serif capital letters.

NETWORKING

Job Ref. #IBMRAZ170

If you are an CNE or have any combination of the following:

- TCP/IP, IPX, Frame Relay
- Ethernet, Token Ring, ATM, FDDI
- HP, SUN, DEC
- Oracle
- Sybase
- DB2/6000
- Novell
- Network Management
- Bridgers, Routers, Gateways, Hubs
- Client/Server
- UNIX, AIX
- NetView
- Windows NT
- Windows 95
- Lotus Notes
- NetBios
- OS/2
- SNA

You could qualify as a:

- Network Consultant/Architect
- Systems Management Consultant/Architect/Specialist

MARKETING

Job Ref. #IBMRAZ171

If you have any of the following skills:

- experience in a large enterprise computing environment dealing with on-line, real-time systems in a client/server architecture
- knowledge of CICS & supported communication protocols
- experience with client networking requirements from OS/2 or Windows
- customer service solutions experience
- CTI and/or voice/data integration
- RS6000/AIX systems
- familiarity with GUI development tools, OO technology & message oriented middleware
- other related computer knowledge

You could qualify as a:

- Technical Marketing Consultant
- Sales Representative
- Marketing Representative

PROGRAMMING

Job Ref. #IBMRAZ172

If you have any combination of the following skills:

- C++
- Lotus Notes
- ESSBASE
- AIX
- UNIX
- DB2, DB2/2
- TCP/IP
- REXX
- Oracle
- AS400
- MS SDK/DDK/MFC
- RISC Assembler
- Multimedia Subsystems (2D/3D graphics, audio, video, etc.)
- C
- Internets
- Internet
- GUI/Win 3.2
- OS/2
- MVS
- Networking
- CMF/SQL
- Sybase
- IBM Mainframe
- X86
- OOD

- I/T Architect
- Software Engineer
- Software Tester
- Customer Support Programmer

Please forward your resume, indicating position of interest, and appropriate Job Ref. # on resume and all correspondence, to: IBM Staffing Services, D1DPA, B1051, P.O. Box 12195, Research Triangle Park, NC 27709; FAX: 1-800-262-2494; e-mail: jobs@vnet.ibm.com. Visit our website at <http://www.empl.ibm.com/carus.htm> for additional opportunities at IBM. IBM is committed to creating a diverse environment and proud to be an equal opportunity employer.

ORACLE DATABASE ADMINISTRATOR

Amgen, the world's largest biotechnology company, is seeking the analytical skills of a Database Administrator to join our staff in Southern California.

Your hands-on responsibilities will include Oracle RDBMS administration, database design, performance tuning and troubleshooting. In addition, you will provide technical support to developers and system users.

Qualified candidates will have a BS in Computer Science or a related field, and proven ability to work on a large distributed system for a Fortune 500 company. Familiarity with Oracle 7, Sun Solaris, SQL-NET, Designer 2000, Developer 2000, Unix shell script, and NT is required. Macintosh experience is preferred.

We value and encourage the diverse perspectives essential to the process of discovery.

At Amgen, your accomplishments will be rewarded. Our generous compensation and benefits package includes a retirement and savings plan, an on-site fitness center and three weeks' vacation. For immediate consideration, mail your resume to: Amgen, Job Code: TPCWDBA, P.O. Box 2569, Thousand Oaks, CA 91319-2569. E-mail: jobs@amgen.com. Please consult our on-line Job Bulletin Board at <http://amgen.bio.com> for information on other career opportunities available at Amgen. Principals only, please.

EEO/Affirmative Action Employer M/F/D/V

Keen to be part of a major SAP R/3 implementation team?

The Saudi Iron & Steel Company (HADEED) is based in the Industrial City of Al-Jabal in the Eastern Province of Saudi Arabia. We operate an integrated iron and steel complex, employing a multi-national workforce of over 2,500 people. The plant operates state-of-the-art technology to produce steel billets, reinforcing bars, wire rod and light sections. In little more than 10 years, the plant has achieved production levels of over 2.5 million tonnes per annum, and is now rated as one of the most efficient steel producers in the world. We are in the process of implementing SAP R/3 (AM, CO, FI, MM, PP, PS, QM, SDI), and require the following specialists to complement the existing project teams:

APPLICATION SPECIALIST/BUSINESS ANALYST

You will be part of the implementation team for specific application areas. This will involve systems analysis, the provision of technical advice, and the design of interfaces and data conversion. You must also have systems implementation and database design experience. Applicants should have a range of experience at least in one of the following applications: Maintenance, Sales & Distribution, Materials Management, Production Planning, Human Resources, and Finance. SAP R/2 or R/3 experience is preferred. Experience in the Manufacturing Industry is an advantage.

PROGRAMMER/ANALYST

You will be working on the conversion from custom in-house developed systems (PRIME) to SAP R/3 software. You will contribute to the development of system functionality outside SAP R/3. Prior implementation and systems development experience is required. ABAP/4 programming experience is preferred.

SYSTEM ADMINISTRATOR/DATA BASE ADMINISTRATOR

Drawing on your previous experience in systems programming and administration, you will provide Systems Administration, Database and UNIX Technical Support. Background in HPUX, Oracle and Open Systems is a must. SAP R/2 or R/3 Basis experience is an advantage.

For all positions, we will require from you a degree and 5 to 10 years relevant experience in a modern system development environment. In addition to a single or married status renewable contract, you will be offered a salary package essentially free of tax, enhanced by an end of service bonus. You will also receive benefits, including free and fully furnished, air conditioned accommodation, transport allowance, fare paid home leave, free utilities and comprehensive medical care.

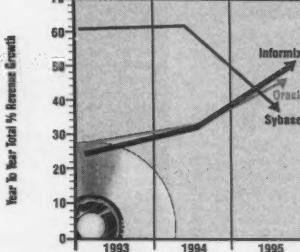

A lifestyle featuring a host of sporting and recreational opportunities is available for you and your family. Travel within the Middle East and beyond to Europe, Africa and S.E. Asia is easy and affordable.

For further inquiries please fax info to 966-3-358-3720.

Send resumes to:

SABIC Americas, Inc.

Attn: SAP R/3, 580 Westlake Park Blvd., Suite 1600
Houston, Texas 77079

Calendar-based yearly comparison.

Read between the lines.

Some companies make outrageous claims about their market performance. We'd rather let the numbers do the talking. Once you compare the data, you'll see that one company is experiencing a 51% increase in revenue. One is soaring into its 19th quarter of profitability and growth. One company—through its merger with Illustra—has broken away from the pack in the object-oriented field. And one company has established a new global standard for data warehousing solutions. Which company are we talking about? Take a look, and judge for yourself. If you want a career with real impact, choose a company with a real future. Team up with Informix. We play to win.

DATABASE ADMINISTRATOR

Here's an opportunity for you to make a recognized contribution, working with leading-edge client/server technology. Join us in the implementation of a three-tier client/server environment, including participating in the final decision process for RDBMS selection.

Responsibilities involve production support, development of new applications, standards, and extensive contact with a midsize applications staff and user community.

The ideal candidate will have:

- 5+ years in a database administrator role
- Experience with RDBMS—SYBASE, Microsoft SQL Server. Or, if your background is in DB2, we will train you on our client/server technology.
- Exceptional communication and organizational skills
- The desire to manage a challenging and complex implementation project.

Come join a dynamic working environment offering an excellent career path including high visibility, ongoing technical training and development, and a highly competitive salary and benefit package. For immediate consideration, please contact: Katherine Baden, WHEELS, INC., 665 Garland Place, Des Plaines, IL 60016. Phone: 847-699-7000 ext. 4803; Fax: 847-699-8075. We are an equal opportunity employer. Smoke-Free Workplace.

Computer Careers Midwest

At Blue Cross and Blue Shield of Florida, Inc., the focus is on innovations for the future! To meet these continuing challenges, we seek team-oriented professionals to join our growing healthcare management information systems operation as a member of the Florida Shared System (FSS) Leadership Team:

SYSTEM PROJECT MANAGER

Responsibilities include developing/distributing FSS products/services to a growing customer base spanning the U.S.; leading a team of approximately 10 data processing professionals in the development/implementation of software changes necessary to support HCFA mandates or customer requested changes; providing ongoing customer service; and interacting with a variety of external organizations, including other BCBS plans, other Medicare contractors, vendors and suppliers, and the Health Care Financing Administration. Requires a Bachelor's degree and 5-7 years experience in developing EDP systems, including project management accountability or 8-10 years of system experience, with at least 2 of those years in a leadership position. A high degree of planning, coordination, customer focus, excellent written/verbal communication skills, and broad experience in software planning, development/management also required. Medicare knowledge desirable. Reference #SAD-629.

SR. TECHNICAL ANALYST

Responsibilities include leading/developing programming and system changes for the FSS; analyzing/developing/testing on-line and batch programs; coordinating/resolving customer inquiries; and performing quality assurance functions. The selected candidate will play a major role in team communication, synergy, and performance and will provide guidance/leadership in all phases of project development. Requires a Bachelor's degree and 7 years experience with project development/systems analysis, programming, debugging, and testing or at least 9 years project development experience, and a high level of expertise in methodology/analytical techniques/technical proficiency such as CICS, COBOL, II, TS/ISPF, VSAM, JCL, etc. Previous leadership experience preferred; Medicare knowledge a plus. Reference #SAD-629.

TECHNICAL ANALYST II

Responsibilities include designing/developing/modifying application system/programs which support the FSS. Requires 5 years of related application design and coding work or at least 7 years of related business experience in application design and coding work, and the ability to interact in a team/customer-oriented environment. Technical knowledge/expertise must include proficiency in ABEND analysis. Reference #SAD-629.

TECHNICAL ANALYST I

Responsible for successful completion of program coding analysis assignments. Requires 3 years of related application design and coding experience. Knowledge/expertise in FOCUS, SAS, or DB2 a definite plus. Reference #SAD-629.

Both Technical Analyst positions are also responsible for interpreting/developing program specifications/requirements; developing program designs/structure charts, program code, test and production of JCL and testing/creating all required documentation. Both positions require a Bachelor's degree or comparable training in Data Processing, technical knowledge/expertise with IBM, COBOL, JCL, Panvalet, ISPF, TSO, etc., knowledge/skill in the design/development of on-line CICS applications including screens, files and programs, technical expertise/problem-solving skills in order to design, develop and analyze a variety of applications programs; and excellent verbal/written communication skills.

In addition to working as a valued team member, you will enjoy competitive compensation, outstanding benefits, and all of the perks of living in Money Magazine's #3 best place to live in the United States - Jacksonville! If your desire is to join an organization where your talents lead to tangible success, forward your resume including reference # above in confidence to: BLUE CROSS AND BLUE SHIELD OF FLORIDA, INC., P.O. Box 44088, Jacksonville, FL 32231-4088, Fax (904) 791-8126. An Equal Opportunity Employer M/F/D/V.

TECHNICAL ANALYSTS

Software Engineer - Algorithm & data structure develop. Windows SDK develop. & logistics modeling. Software design, develop, & testing of advanced graphical user-interfaces, commercial research products & algorithms (using CPLEX, LINDO), object & relational database models & geographical systems using C/C++, Visual Basic, Visual C++, Visual BASIC under the following O/S: MS, DOS, MS Windows, Windows 95, Windows 98, etc. Troubleshoot & provide user support for systems & related application software. Specify in detail, mathematical & logical operations to efficient computer operation. Perform research for future software applications using various Operations Research techniques, incl. network optimization, vehicle routing, mixed integer programming, location models, & related algorithms. Proficient in large scale Operations Research (OR) software development using C, C++, UNIX, Linux, OS/2, VMS, AIX, DOS, Windows. Able to use prevailing OR software such as CPLEX, LINDO, ORION, OSL, SPSS, SAS, SPSS, 0-500-40 hr/wk. Please send resume to: Georgia Department of Labor, Job Order # GA 5953479, 465 Big Shanty Road, Marietta, GA 30066-3363 or the nearest Dept. of Labor Field Service Office.

Programmer/Analyst responsible for maintaining and upgrading software of warehouse distribution center. Specifically, will assist in root-cause analysis to determine problems with software, analyze, design, construct, maintain, debug & provide support to real-time warehouse management system. System interacts with conveyor systems, local PC networks & radio frequency terminals; system controls distribution process, picking, shipping, manifest, statistical performance data gathering, decision support. Will analyze statistical data and generate reports. Reports: B.R.C. B.Sc. in Statistics, C.I.S. or Computer Science and two (2) years experience in job. Other OR experience in any occupation developing ORACLE OLTP systems in UNIX environment. Candidate's experience must include one year of expertise in ORACLE program development using Pro*C, SQL*Plus & SQL*Reflector. Experience: Expertise in logical data modeling using entity relationship & data flow diagrams; experience in creating physical ORACLE databases & expertise using source code management tools. TWO OPENINGS \$30,000-\$35,000 M-F 40 hr/wk. Job Location: Memphis, TN. Send resumes to Case Numbers TN6200124 & TN6200125, attention: Director of Employment Security, 311 Martin Luther King Blvd., P.O. Box 11088, Chattanooga, TN 37401-1088. All applicants must be U.S. workers eligible to accept employment in the United States on a full-time basis.

Senior Development Manager Supervisor & lead a 10-person development team to research, design & develop computer aided system engineering (CASE) tools for the design of distributed systems & High Productivity Systems (HPS) utilizing HPS, C++, MS Windows, Microsoft Office, Oracle, PL/SQL, & Relational Database Design Methodologies. Evaluate performance of development team members & management of software products. Requires: B.S. in Computer Science, Electrical Engineering or related field, & four years experience in software development or as Consultants or Software Engineers. Four years of experience must involve project management of applications utilizing HPS, C++, MS Windows, Windows Molt, Oracle, PL/SQL, & Relational Database Design Methodologies. 40 hr/wk, 8:00 am - 5:00 pm. Mon-Fri. \$88,000/year. Overtime N/A. Overtime Seminar! Job location: Cary, NC. Requirements: An applicant must include Social Security number & Job Order # GA 5947245, 2949 N. Druid Hills Rd., Atlanta, GA 30329-3909, or the nearest Department of Labor Field Service Office.

PC SOFTWARE ENGINEERS

This leader in state-of-the-art scanning and data systems seeks PC Software Engineers, with BS/MS in CS/EE, to join their existing team.

PC SOFTWARE DEVELOPMENT—Diverse role in the development/support of TSRs, DLLs and embedded firmware within a PC architecture. 8+ years general software development including DOS and TSR development in Assembly, with TCP/IP, FIP, DLLs and network firmware/protocol stack development desired. Power management and serial communications are strong plus.

PC SYSTEMS SOFTWARE DEVELOPMENT—To develop/support Windows DLLs and VBAs for MS Windows—an expert in developing software applications using MS Windows, with Visual Basic, PowerBuilder & Delphi. 4+ years experience including MFC and C++ and Win32 and VB/Cx desired. Assembly network protocol stacks and DOS TSR development are strong plus.

MTS/SYSTEMS PROFESSIONALS

If you have a proven track record in the specification, design and implementation of software systems, a background in object oriented programming using C/C++ and knowledge of UNIX and/or Windows NT server operating systems, then the small but successful supplier of communications solutions mainly for public networks wishes to talk to you. Open positions include Programmers, Systems Developers, Applications Developers and Test Engineers and vary in level from Engineer, Senior Engineer, Principal Engineer through to Manager. Send/fax your resume, with salary information, to:

CREATE TOMORROW'S TECHNOLOGY

The Harris Electronic Systems Sector is creating the future with emerging software products and systems for many exciting applications. Right now, we are seeking qualified individuals for immediate opportunities at our headquarters facility in Melbourne, FL. Candidates for the following positions must possess a Bachelor's degree and at least 1-10 years of experience in one or more of the areas listed:

Software Engineers

Commercial Applications—Melbourne and international positions available in Transit, Energy Management Systems, Airports, Transportation Surveillance. Experience with C, C++, UNIX, MOTIF, X-Windows, WindowsNT, client/server or communication protocols required.

Business Applications—Lead SW development in migration to PeopleSoft Financials. Requires experience with COBOL, SQL, Logical Data Modeling techniques. Process Characterization, SW development life cycle, and client/server architecture. Financial applications and PeopleSoft a plus.

Database Development—SW development experience with mainframe database applications, DB2, COBOL, MVS, or IEF CASE Tools required.

Scientific Applications (SW design/development)

Requires experience in C++, Ada, OO Methods, UNIX, CASE Tools, Rationale and HW interfaces, Real-time SW, GUI, Command and Control SW, networking, HTML, image processing, VxWorks, RDBMS, or X/MOTIF GUI. A security clearance with SBI, TS or "X" access is a plus.

Management Information Systems

Voice/Data Networks—LAN/WAN experience required. SONET, FDDI, Ethernet and transmission systems experience preferred. Security clearance a plus.

Network Operations Management—Requires experience with bridge/routers, network hubs, Ethernet, operating systems, protocols, desktop computing, troubleshooting network infrastructures. EBI security clearance a plus.

Systems Engineers

Voice/Data Networks—Requires LAN/WAN, digital transmission, routers, bridges, Ethernet and TCP/IP experience. SONET, ATM, ISDN, SS7 experience preferred. Security clearance a plus.

Commercial Applications—Melbourne and international positions in Transit, Energy Management Systems, Airports, Transportation Surveillance, Telecommunications, SATCOM or client/server experience required.

Engineering Specialist

Requires degree in degree (or equivalent). PC/Mac HW/SW troubleshooting, MS DOS, MS Windows (1.3, 3.1, NT), MS Office Suite, TCP/IP, FDDI/Ethernet network protocols, UNIX, Microsoft NT LAN administration experience.

Apply Today! (Reference Dept. CW/0325) Fax: (407) 729-1858 (fine mode); Email: resumix@harris.com (ASCII text); Mail: Harris ESS, Human Resources, P.O. Box 37, MS 2/1430, Melbourne, FL 32902; Web: <http://www.ess.harris.com/>; JobLine: (407) 727-5020. EOE M/F/D/V.

SYSTEMS ANALYST

Analyze, design, develop and test software applications. Technical environment: UNIX, C, ORACLE, SQL*Forms 3.0, Reporterwriter 2.0, PL/SQL and related client/server and distributed DB with modern technologies. Duties: user interaction, requirements definition, project planning, design program specification, coordinate with hardware team. Education & Experience: B.A. or B.S. degree with a concentration in Computer Science and two years as Programmer/Analyst. An Analyst/Engineer toioneer to experience or graduate coursework in Oracle 6.0, SQL*Forms 3.0, PL/SQL, RPT1, UNIX/C, Salary: \$30,000-\$40,000.

Programmer Analysts needed for self, vacation, and sick leave. This is a consulting position and extensive travel within the US is required. Applicants having prior legal experience with US law firms or government contractors are encouraged to apply to Georgia Department of Labor, Job Order # GA 5947245, 2949 N. Druid Hills Rd., Atlanta, GA 30329-3909, or the nearest Department of Labor Field Service Office.

ProLink Services

We are a young, dynamic organization that provides teams and projects to our clients for technology business, data warehousing, data mining, data acquisition and internet solutions. We are seeking to be a part of the following core teams:

Lotus Notes Team: Designers and implementation specialists in document management, workflow engine and groupware automation systems.

PeopleSoft Team: Senior level specialists in financial or HR implementations.

Oracle/Sybase Team: Senior Application designers, developers, DBAs and SQL developers with optimization experience desirable.

Internet Team: HTML document designers, Web server specialists, Java developers and CGI implementation experts.

We offer various effective compensation packages, a cafeteria plan of benefits and certification training. Plan benefits include Health Ins., Life, LTD, Dental and Investment accounts. Send your resume with salary requirements in confidence to:

COMPUWARE
An Equal Opportunity Employer

Choose the Northwest for quality of life. Choose ADP for quality of worklife.

Client/Server computing and ADP. What a powerful combination. Our research & development organization, based in Portland, OR, offers outstanding opportunities as we partner with our customers to help them expand and exceed their business goals. With 13,000 customers, over 160,000 computer devices, and over 100,000 applications, we have plenty of challenge and scope for your talents as we transition into a Client/Server environment. Add to this the financial performance and backing that ADP brings to the equation with recent annual revenue growth of over 30%, and you have a winning combination.

Find out how you can play a role in our future in one of these positions:

- Client/Server Architects
- Software QA Engineers
- SW Engineering Management
- Network Engineers
- Software Technical Support
- Technical Documentation/Training (Client/Server)
- Software Engineers

We work in a multi-disciplined environment consisting of large and small systems based on UNIX and NT server operating systems across a variety of platform architectures. We seek individual contributors and managers with software engineering experience in the following areas:

- Client/Server
- C, C++
- Visual Basic
- Windows (NT/95)
- Networking
- LAN/WAN, SNA, X.25
- Internet Applications Development
- Software Performance/Analysis Measurement
- UNIX
- Visual C++
- OLE, MFC, ODBC
- OO Design
- Systems/Network Management
- Automated Software Testing
- CBT, Interactive Video
- Framemaker
- SQL Server
- ORACLE

But technology is only half the story. Our talented team enjoys working as part of a close-knit group of technical professionals in an environment that cares as much for the individual as the work we do. You'll find a real sense of work/personal life balance and family here, and your ideas and comments will be heard. If you are self-motivated, flexible and resourceful and looking for a better quality of worklife, learn more about ADP in Portland, OR.

Please send your resume to: ADP Dealer Services, Human Resources, Dept.CPTW, 2525 SW 1st Ave., Suite 450, Portland, OR 97201. E-mail: ADP-HR@ix.netcom.com No phone calls please. ADP believes diversity leads to strength. We are an Affirmative Action/Equal Opportunity Employer M/F/D/V

NIELSEN MEDIA RESEARCH, the leader in the TV ratings industry and a dynamic division of a Fortune 500 Corporation, relies on innovative technology to provide complex audience measurement data. Continued growth has created new opportunities at our Tampa Bay, Florida area headquarters. All these positions require a degree in Computer Science, Electrical Engineering or equivalent work experience.

Do you have solid professional experience in these areas?

SERVER APPLICATION DEVELOPER — C and C++, proficiency in Sybase relational DBMSs (SQL, triggers, stored procedures), object oriented methodologies and UNIX, plus the ability to work on a RAD development team in an MS Windows environment.

PC APPLICATION DEVELOPER — Experience in commercial software Windows development using C/C++ and 2 years hands-on development using PowerBuilder, 3-5 years experience in systems design on complex, full life cycle Windows applications (multi-platform, relational database preferred). Visual Basic, Excel Macro development and OLE experience desirable.

DATABASE ADMINISTRATOR — We'll rely on you to design, implement and tune physical databases. Experience in software development of large complex applications, relational database administration, and 1 year experience using Sybase. Familiarity with Open Client/Server, Replication Server, C coding and Solaris is desirable.

SOFTWARE QA ANALYST — QA Analyst with at least 1 year in a Client/Server environment. The Client/Server experience must be in a GUI (PowerBuilder preferred), RDBMS (Sybase preferred), UNIX, and C environment using test tools and version control packages, such as PVCS.

We provide an excellent relocation package plus an attractive salary and benefits. Send your resume indicating the position of interest to: **NIELSEN MEDIA RESEARCH, INC., Human Resources Dept. #CW-3996, 375 Patricia Avenue, Dunedin, FL 34698. FAX: (813) 738-3012, Job Line: (813) 738-3039.** An Equal Opportunity Employer M/F/D/V. All inquiries welcome.

Nielsen Media Research
A company of The Dun & Bradstreet Corporation

Are your skills being underutilized?

At Andersen Consulting LLP, we integrate strategy, people, process and technology to help our clients create a sustainable business advantage. Our Business Integration philosophy has made us the premiere international management consultancy.

Our global company employs more than 38,000 people and populates 152 offices in more than 47 countries. We have a stable, solid track record for growth that has created increased opportunities nationwide for Managers to join the Financial or Communications Market Units within our Technology Group.

We are seeking accomplished Client Server professionals highly skilled in planning and managing the technical design and delivery of world class Technology-based business solutions. All positions require flexibility for travel along with the following credentials:

CLIENT/SERVER MANAGERS AND ARCHITECTS

- Minimum 6+ years hands-on technical experience in a Client/Server or architectural role developing large, complex systems in a distributed computing environment.
- Project management experience is essential.
- Representative architecture skills include two and three-tiered architectures, asynchronous/synchronous messaging, data/application partitioning and distribution, imaging, multimedia, object design and programming, data warehousing and networking.
- C, C++, PowerBuilder, Visual Basic, UNIX, OS/2, Windows NT, Oracle, Sybase, Informix, Peer Logic Pipes, Message Express, MO Series, IEF, Oracle Developer 2000, ViewStar, Recognition and FileNet skills are preferred.
- Financial Services and/or Communications industry experience a plus.

INTERNET MANAGER

- Thorough familiarity with current and emerging Internet technologies is essential.
- Must be a solutions-driven software engineer with strong architecture and web construction experience who can design, develop and deliver innovative, new Internet applications.

Andersen Consulting LLP invests substantial financial resources in training our managerial staff, and offer a wide variety of on-going courses to encourage the development of expertise in specific businesses, technologies and industries. We also provide a competitive salary, fully commensurate with your education and experience, along with excellent benefits.

If you want to join a fast-growing, leading edge group of professionals, please forward resume and cover letter which must indicate position of interest to: Andersen Consulting LLP, Dept. CW 325, 1 Market Street, Suite 3500, San Francisco, CA. 94105. FAX: (415) 281-1700. Visit our web site at: <http://www.ac.com> Andersen Consulting is an Equal Opportunity Employer. Doing the power lunch

CIOs must deal with client/server application vendors that skirt them to reach the CEO

By Leslie Goff

It's beginning to look a lot like the '70s: You can catch your favorite episode of *Welcome Back Kotter* on Nick-at-Nite, buy a polyester shirt and bell-bottom jeans at the mall and spy a software salesperson courting your CEO over an expensive meal.

When it comes to choosing client/server-based financial applications, the decision is frequently being made outside the information services department.

"It seems that the CEO goes out to lunch with an SAP exec, has three martinis, and it's a done deal," says Jim Webber, head of Omicron, a consortium of East Coast-based information systems executives in Mountain Lakes, N.J. "These decisions are being made at the top, without a lot of the disciplined cost/benefit analysis."

One analyst disagrees. "I think it's two martinis. But the SAP decision certainly seems to emanate from the top," says Barry Wilderman, vice president of application development strategies service at Meta Group, Inc. in Stamford, Conn.

IS managers and analysts alike agree that SAP America, Inc. in Wayne, N.J., has marketed its software to the executive suite so effectively that, quite often, neither IS nor the lines of business are in on the decision.

"I get calls all the time from CIOs who say, 'Don't tell me whether I should have bought it or not; I had nothing to do with it. But now that I have it, how do I implement it?'" says Bobby Cameron, a senior analyst at Forrester Research, Inc.

in Cambridge, Mass.

SAP's R/3, the leading enterprise-wide financials package, is a "take-it-or-leave-it" purchase: You buy the whole suite of integrated applications — from general ledger to accounts payable — or none at all. Building on its integration strengths, SAP captured the imagination of senior management to the tune of \$1.88 billion last year, Cameron says. Its closest competitor is Oracle Corp., with sales of \$700 million.

"There is only one company, vendor or otherwise, that has ever built a fully integrated, enterprise-wide client/server application, and that's SAP," Cameron notes. "That was the fantastic dream of the last 15 years. SAP has delivered against that belief and has caught our fancy. Very conservative, centrally controlled applications make senior executives feel more comfortable."

Yet, SAP is winning over IS management. It has done so by fulfilling key functionality and technical requirements, such as the ability to handle high transaction volumes and do ad hoc reporting.

Baxter Healthcare Corp. in Deerfield, Ill., had a list of more than 500 requirements for its re-engineering of legacy financial systems to a client/server environment, says Steve Van Kuiken, director of new product development and SAP project director. His team screened some 50 packages.

"SAP stood apart because of its breadth of functionality. Far and away, it met more of our requirements. It probably isn't as fully functional as our legacy app," he says, "but because of the integration, we'll have less reconciliation of the numbers, and

we'll be able to close our books a lot faster."

The deal maker will be transaction volume for J.B. Hunt Transport, Inc. in Lowell, Ark., which is gearing up to buy a client/server financial package.

"We produce 650 checks a night, and each check could have multiple invoices," explains Kay Palmer, vice president of applications at the company. Overall features and the vendor's financial stability and rep-

utation for service and support will also be important.

"Integration of the systems is important, but more from a user standpoint," she says. "We need accounts receivable, accounts payable and general ledger to interface, and we need to be able to build our own interfaces between some systems."

Goff is a freelance writer in New York.

PREPARATION CHECKLIST

- * Before you throw out your legacy system, make sure it isn't getting the job done. Don't confuse poor access to data with poor systems. You may be able to accomplish your goals by installing middleware between front-end applications and back-end databases.
- * Determine whether you need an enterprise-wide application or a "best-of-breed" financials-only package.
- * Decide whether the application will roll out across the entire company at once or unit by unit.
- * Look for integration with other applications: Is the package fully integrated or does it offer interfaces between applications?
- * Analyze the vendor's financial performance, R&D strategies and long-term commitment to the product.
- * Narrow your choice to two vendors before you begin product testing and evaluations.
- * Devise a checklist for technical criteria (i.e., Is it fully integrated? Does it offer on-line analytical processing? How strong is the data replication?).
- * Devise a checklist for functional criteria (i.e., Does your company keep multiple books in multiple languages for multiple currencies? Do you need configurable ledgers? Is activity-based costing important? Can the package generate scheduled invoices? Will users be able to do ad hoc reports?).

CYLINK SUPER HIGHWAY PATROL

Introducing SecureAccess™: A new concept in remote network security.

Now your users can access your company network anywhere, anyway, any time, without compromising network security — with the SecureAccess System from Cylink. Users simply dial in using the Internet, or any other public switched network, for the most cost-effective remote access.

Certifiably secure.

Cylink's X.509 digital certificates; unlike firewalls, challenge response tokens and other access tokens give

you the security of knowing that intruders are locked out.

Through low-cost public networks.

SecureAccess is comprised of three separate components: SecureTraveler™ for Windows™, SecurePocket™ Traveler™ and the SecureGate™.

Get security you can take with you.

Call Cylink today at 1.800.533.3958 (US) or 1.408.735.5800 (outside US) for the number of a representative in your area.

STEVE MEEK

'net assets

By Tam Harbert

Finding good investment information on-line presents the perennial challenge of the Internet.

"It's out there somewhere. The question is where," says Jim Jubak, senior financial editor of *Worth* magazine and author of *The Worth Guide to Electronic Investing*.

There are hundreds of investment sites on the Internet and the various on-line services. For those interested in technology stocks, the problem is finding a way to sift out non-technology-related information.

For example, there is a plethora of information on technology stocks in the Usenet newsgroups, such as misc.invest, Jubak says. Recently, one newsgroup contained a series of exchanges among investors and an engineer at Silicon Graphics, Inc. (SGI). That kind of information can provide valuable insight into a company.

"There was a wealth of technical detail there that I haven't seen in any analyst's reports that cover the company," Jubak says.

To help him locate only technology-related information, Jubak uses a "newsbot" program that works with his Internet service. The program can be set up to automatically log in to various newsgroups and scan for key words, delivering only relevant news-group postings.

Jubak also recommends that investors check the World Wide Web pages of the top high-technology investment bankers, including Hambrecht & Quist, Inc., Robertson, Stephens & Co. and Alex. Brown & Sons, Inc. These sites typically include reports from analysts and details on upcoming conferences. Knowing when an investment house is having a high-profile conference can be key information for an investor because technology stocks often rise or fall in reaction to news from a confer-

ence, Jubak says.

And don't neglect the home pages of the companies in which you've invested. About 1200 public companies have home pages on the Web, 900 of which include investor information, according to Carol Abrahamson, president of Investor Relations Resources, a consulting firm in Mountain View, Calif.

Abrahamson regularly scours the Internet for general investment sites and for company home pages that contain investor relations information. Her consultancy publishes a quarterly newsletter for the investor relations departments of public companies.

The amount and quality of investor information on company home pages ranges from basic, such as a few press releases on earnings reports, to comprehensive. Among the companies with the most comprehensive information is AT&T, Abrahamson says.

The company includes not only its annual report and quarterly updates, but also its fact book, a companion document to the annual report that contains extensive details, such as executive biographies and lists of key customers. "These are the things that Wall Street needs to follow a company," she notes. Companies typically print only a few thousand copies of their fact book and distribute it to Wall Street and institutional investors.

AT&T's site also includes a transcript of the chairman's annual meeting speech and a summary of the annual meeting votes.

In general, telecommunications companies have good investor information on their home pages.

"In terms of investor vision, the telcos seem to be using technology to the limits," Abrahamson says. In contrast, computer companies such as SGI and Sun Microsystems, Inc. are lightweight. "The investor content of their sites clearly isn't a priority," she notes.

Tips for researching on-line:

Prioritize. Make a list of no more than 10 kinds of information you would like to access on-line, such as news headlines, quotes, analysts' recommendations, earnings estimates or Federal Reserve Board monetary policy. This list should reflect your investment style and goals, so be as specific as you can. For example, if you use technical analysis — looking at a stock's price and volume data from the past to predict future price movements — then historical price and volume data should be high on your list. But if you invest based on basic data, then earnings might be your first priority.

Evaluate. Just as important as the quality and quantity of information is the structure of the site. Even a site with great information can overwhelm you unless it provides tools to separate the useful from the useless.

Keep exploring. Remember that building an on-line investment system is always a work in progress because new resources are constantly coming on-line. Information that everyone knows is less valuable than information that is lesser known and can provide a temporary edge.

(Excerpted from *The Worth Guide to Electronic Investing*, Harper Collins, \$16.)

The Week in Stocks

Industry Almanac

Netcom or ‘netgo’?

As AT&T Corp. (NYSE:T) and MCI Communications Corp. (NASDAQ:MCIC) enter the Internet access market, the stock of the early darlings of Internet access have fallen. How will one of the pioneers, Netcom On-Line Communications Services (NASDAQ:NETC), fare?

Rakesh Sood, a technology analyst at Hambrecht & Quist, Inc. in San Francisco, has a hold on the stock. The price of Internet access has dropped to near zero with the entrance of AT&T and MCI, both of which offer five hours of free Internet access to their telephone subscribers.

To balance usage, Netcom needs more business subscribers. But the company recently reported that the proportion of its revenue derived from corporations has dropped from 18% to 16%, Sood says. To increase corporate business, Netcom must beef up the extent and speed of its network, he says.

"The combination of higher expenditures and lower margins has pushed out profitability from the beginning of 1997 to the middle of 1998," Sood says.

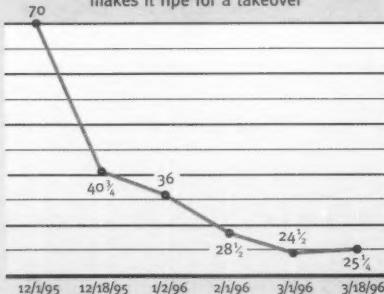

"The fear, uncertainty and doubt surrounding the new AT&T service has caused a market overreaction, sending Netcom's price lower than it should be," he says. Finnie says AT&T

And Netcom is a potential takeover target for larger compa-

ernet access market, he notes.

Nature Protocols

Analysts say Netcom's recent stock price plunge makes it ripe for a takeover.

NEW Delphi Client/Server Suite 2.0—Solutions for Success. When the First National Bank (FNB) of Chicago needed a client/server application to provide their purchasing card customers with immediate access to their accounts, it turned to Borland's Delphi® for the solution. Delphi Client/Server Suite met all of their criteria for creating the FirstWindow 2000 Purchasing Card application. This application allowed customers access to a huge organizational hierarchy of departments and regional offices in a very graphical, drag-and-drop fashion. This experience with Delphi enabled two developers to create the powerful Information Manager application in just three months, less than half the budgeted time. Based on this success, FNB has adopted Delphi as the standard for all of the FirstWindow 2000 applications across the enterprise.

Graceful scaling across databases. The beauty of Borland's client/server tools is that they allow you to build applications that meet changing business requirements. With the

built-in SQL Links capabilities in Delphi, users can readily access all of the most popular SQL databases, including Oracle, Sybase, Informix, Microsoft SQL Server, and InterBase.® FNB built their applications on the InterBase database and found it to be the easiest SQL server to install, use, and maintain.

Fast application development and ease of use. Delphi Client/Server Suite is the only tool to combine the performance of a native-code compiler, the productivity of visual component-based design, and the flexibility of scalable database tools. It

provides all the tools for professional client/server development including a Data Dictionary, Object Repository, SQL Monitor, Visual Form Inheritance, integrated Version Control, and more. You don't have to choose between productivity and performance, or power and flexibility anymore.

Gain the competitive advantage. Delphi gives the First National Bank of Chicago and its clients an unfair advantage. But, that's often what it takes to win the race.

As Art Hill says, "It is rare in our industry when one product is so much better than all of its competitors that you must have it. Delphi Client/Server Suite 2.0 is that good."

For more information or an evaluation copy of the New Delphi Client/Server Suite

Making Development Easier

News

Airline turbocharges schedule efficiency

CONTINUED FROM PAGE 1

pared with the \$1.2 million in shrink-wrapped software that vendors pitched to Southwest — proposals that didn't include system interfaces to the airline's reservations and maintenance systems.

Most airlines already use linear programming technologies to optimize flight and crew schedules, "but there's a lot more that airlines can do with technology to improve upon these processes," said Mark Shields, a principal in the aviation practice at Mercer Management Consulting in Washington. Unlike competitors such as United Airlines, which manages multiple aircraft types across international regions, Southwest flies only Boeing 737s on domestic routes.

Perfect fit

As such, Southwest would likely gain more from automating its flight planning activities than most airlines "since it has a formula that plays on simplicity," Shields added.

The airline is hoping to do just that. Its project, called the Southwest Airlines Integrated Flight Tracking System (Swift), is a set of Unix Motif-based programs that the airlines' 37 dispatchers

and routers began using last fall to track 2,200 daily flights. The systems were built using Cambridge, Mass.-based Integrated Computer Solutions, Inc.'s Builder Xcessory tool.

Bon voyage

Southwest has been awarded the U.S. Department of Transportation's "Triple Crown" four years running

On-time performance (Percent of total flights that were on time)

SOUTHWEST	82.3%
NORTHWEST	80.7%
US AIR	79.8%

Customer complaints per every 100,000 passengers

SOUTHWEST	.21
NORTHWEST	.52
ALASKA AIRLINES	.52

Lost luggage per every 1,000 passengers

SOUTHWEST	4.26
CONTINENTAL	4.69
AMERICA WEST	4.82

Source: U.S. Department of Transportation

Dispatchers armed with Silicon Graphics, Inc. Indigo II workstations are now able to click onto Motif buttons to calculate how much fuel is needed for a flight or to route a plane around bad weather, according to Mark Mortland, the lead programmer on the Swift project. Previously, these tasks were performed manually.

Later this year, Southwest will add other applications to Swift to address flight planning, maintenance and other functions, said Marty Gephart, a systems engineer and a Swift project leader for the \$2.9 billion carrier.

Chain reaction

To date, Swift has enabled Southwest's dispatchers to re-route passengers from canceled or delayed flights 20 times faster than it could using manual techniques.

For example, if a 2 p.m. arrival into

Houston is going to be 20 minutes late, the dispatchers and routers can click on a series of Motif buttons to figure out how that will affect the outgoing 4 p.m. flight and connecting flights for passengers, Gephart explained.

Prior to Swift, dispatchers and routers had used a 17-ft-long flow sheet that contained all of Southwest's daily flight information. Although they had become proficient at scanning the flow sheet, dispatchers and routers often took up to 15 minutes to check the airline's reservation system and passenger lists before coming up with a set of rerouting options.

"We were missing opportunities to protect the customer because there was so much data to look for" on the flow sheets, said Dave Jordan, director of flight dispatch at Southwest.

But by using their Indigo II workstations, staffers can now get that information in just 15 seconds by accessing a Sybase, Inc. 10.0.2 relational database management system through Hewlett-Packard Co. K400 servers.

That speed is critical to Southwest, which added 300 daily flights last year after expanding its arsenal from 191 planes to 226 aircraft in 1995.

& The largest U.S. insurer is also looking to maintain a competitive edge. See page 51.

Scheduler links Unix, NT, host

By Bob Francis

Data center managers who bemoan the dearth of enterprise-wide job scheduling tools will get a new option next month when Platinum Technology, Inc. announces AutoSys 3.3.

AutoSys is a job scheduling product that runs on Unix and Microsoft Corp.'s Windows NT platforms. The new version will include integration with Zeke MVS, a widely used mainframe job scheduler that Platinum also owns.

Later versions will link with other mainframe job schedulers, said Chip McAvoy, vice president of Platinum's AutoSys group in Oakbrook Terrace, Ill.

Jump on it

Integrating job schedulers with mainframe applications gives information systems managers the ability to quickly move jobs completed on one platform to another, explained a beta user of AutoSys 3.3 at a major West Coast telecommunications company.

Currently, system administrators have to set up alerts that indicate when one platform has completed a job so they can send it to another platform. The integration of Zeke MVS and AutoSys allows that to happen automatically, McAvoy said.

Some applications, such as SAP AG's R/3 and Legato Systems, Inc.'s Legato, include their own job schedulers, so future versions of AutoSys will integrate with those as well, McAvoy said.

Other features of AutoSys 3.3 include time zone support and the ability to communicate with other AutoSys environments in other locations.

At Networld/Interop '96 next week, Platinum will announce that three of its product lines have been certified to work with Hewlett-Packard Co.'s OpenView IT/Operations console. That means IS managers can access Platinum's AutoSys, along with its DBVision and ServerVision performance management tools, from HP's operations console.

Platinum is projecting revenue of \$300 million this year and now has more than 2,000 employees worldwide.

& Platinum also readies POEMS, its platform for open systems management. See page 57.

Data warehouses

CONTINUED FROM PAGE 1

learn about data warehouses at a very reasonable cost and see what benefits it will bring to your corporation," said William Parker, chief information officer at Agway, Inc. in Syracuse, N.Y.

The company uses a relatively small 15G-byte data warehouse based on NCR hardware to build customer profiles for its sales

force. Using information from the data warehouse, an Agway sales representative can quickly build customer profiles that show purchasing patterns, product preferences and the money a customer spends on Agway products.

A data warehouse is a large repository of highly refined information relating to a corporation's business core that is culled from a variety of sources. Different user

departments can access and customize the warehouse. It contains multiprocessor hardware platforms that run several layers of database software.

Typically, setting up data warehouses has been expensive, time-consuming and resource-hogging, said Ken Rudin, an analyst at Emergent Corp., a consultancy in San Mateo, Calif. "One of the things that is most important with the NCR program is the concept of a scalable database where people have the ability to start

small and then grow rapidly to a full production system," he said.

That approach will help users "minimize the risk and exposure of going to a new technology like data warehousing," said Howard Richmond, a vice president at Gartner Group, Inc. in Santa Clara, Calif.

Trial run

Under NCR's program, corporations can evaluate data warehousing on a trial basis for \$30,000 to \$50,000. The 15-day program lets organizations build a prototype with their own data by using NCR hardware, relational databases and query tools.

NCR will also help first-time users set up fully functional departmental warehouses under a guaranteed fixed-fee program.

NCR will work with companies to pull together information that will go in the data warehouse, transform the data as required, build a client/server user interface and install the hardware. That program starts at around \$800,000 and comes with a 90-day implementation guarantee that protects users from cost overruns, according to Robert Donald, assistant vice president of marketing at NCR.

Data mining by degrees

Users get the following at each price point with NCR's scalable data warehouse program

NCR First Step (Prototype warehouse)

Price: \$30,000 to \$50,000

Includes:

- 15 days of on-site training
- Plan for moving to a production environment
- Evaluation of hardware
- Relational database and query/analysis tools

NCR RightStart (Departmental warehouse)

Price: \$800,000 and up

Includes:

- Guaranteed 90-day implementation
- Professional services, including information discovery and data transformation
- Installation and client/server user interface
- Multiprocessor hardware and database software
- Data warehouse tools

Custom Engagement (full-fledged custom warehouse)

Price: Depends on project size

Includes:

- Professional services, including information discovery, design services, implementation services, and support and enhancement services
- Data warehouse database and tools
- Partner referral services

The Back Page

Fault lines beneath Unix's terra firma

Charles Babcock

Why doesn't someone in the Unix community plant a stake in the ground and urge everyone to rally around a 64-bit version of the operating system?

There's no better time to close ranks than when you have to convince a lot of users that a change is in their best interest.

Moving to 64-bit Unix would be enhanced if users were guaranteed that it would run a broad set of applications, regardless of the brand name on their hardware.

As a matter of fact, all Unix vendors could adopt a common, core 64-bit Unix at minimum expense because a lot of the work already has been done. Remember the Open Software Foundation? It produced a core set of code and specifications around which a 64-bit Unix could be built. Digital adopted them and spent millions to build its Digital Unix system.

Wait a minute. Wasn't there also an attempt to rally the troops at

UniForum in February? Yes, but some of the most important combatants didn't show up.

Hewlett-Packard and SCO (the new owner of UnixWare) teamed up and called for support for a future 64-bit Unix, called Summit 3DA, that they will jointly develop.

HP and SCO promise to combine three operating systems (HP-UX, SCO's OpenServer and what used to be Novell's UnixWare) into one, and together they hail this move as a step toward consolidated Unix.

It is a step — a baby step. A lot of Unixes still must be consolidated. They include Sun Microsystems' Solaris, IBM's AIX, Sequent Computer Systems' Dynix/ptx, Silicon Graphics' Irix and NCR's Unix System VR4, just for starters. Or consider Pyramid's Reliant Unix, HP Convex Technology Center's Scalable Parallel Proces-

The Meta View

With two steps forward and one back, the Unix community lurches forward.

sor-UX, Siemens Nixdorf's Sinix and Cray Research's Unicos. And while we're at it, let's throw in Unix from Data General.

IBM and Digital sent low-level representatives to the HP/SCO press conference that announced Summit and gave it their thin blessing, but the two have remained silent about when — if ever — they would adopt such a system.

Sun's Scott McNealy was openly defiant in a UniForum keynote. "We outshipped SCO, IBM and HP combined. For [HP and SCO] to try to do something without Sun involved — it won't happen."

least a year's lead on the others with their 64-bit Unix offerings, and they are unlikely to give up that lead.

Both are cashing in on the desire of large user sites to build big database transaction processing systems and data warehouses.

Digital and Silicon Graphics have a competitive advantage. Sixty-four-bit Unix gives a computer system the capacity to address 14G bytes — in the case of Digital Unix — or enough to handle the largest applications with room to spare.

It has a theoretical capacity of 16.7T bytes, and even the most

ambitious users are a long way from depleting that. Thirty-two-bit systems, which include all other Unix offerings, usually address 2G bytes for applications.

Informix and Oracle understand the appetite for very large database applications and have released parallel versions of their systems to run on multiprocessor servers from Digital and Silicon Graphics.

So these initiatives outline the ongoing fissures within the fractious Unix community. Each of the Unix vendors represents a set of initiatives, and together they represent a kind of divisive strength. In its variety, the Unix community keeps innovating.

But I hope its members keep an eye open for the chance to find more common standards and shared APIs. In this fashion, with two steps forward and one back, the Unix community can lurch toward greater harmony.

Babcock is *Computerworld*'s technical editor. His Internet address is charles_babcock@cw.com.

Inside Lines

Amelio, Gates kiss Blarney stone

The blarney must have been flying on St. Patrick's Day in Seattle when new Apple Chairman and CEO Gilbert Amelio met informally with his Microsoft counterpart, Bill Gates. The meeting of the two book authors was initiated by Apple as a gesture to repair the decade-long love/hate relationship between Apple and its biggest third-party software developer. Hopefully, the green beer smoothed things over, because Wall Street wags suggested that Amelio consider borrowing some big bucks from billionaire Bill. That's because Apple is expected to post a whopping \$200 million loss for the current quarter, which ends this week.

Andreessen red-faced over home page

Cruise to Marc Andreessen's home page, and you're in for a big disappointment. The Netscape Communications co-founder has adorned <http://home/netscape.com/people/marc/index.html> with nothing but a big image of his face, inexplicably tinted red. And that's it. Nothing else. No text, no interactivity, no cool Java applets like you'd expect. When we sent electronic mail to Marc asking for an explanation, "I've been busy" was the reply.

Steep learning curve

Novell is joining other major vendors by focusing on Internet services, but the company still has a way to go to carry it out. Novell admitted that its Web-based registration for its annual BrainShare conference last week didn't go as planned. Novell's Web servers receiving the information didn't support Multipurpose Internet Mail Extension (MIME) attachments (an Internet standard), making it pretty hard to process the attached registration forms. And for those users trying to register via

CompuServe, the on-line service's mail doesn't support MIME either.

It's not nice to fool ESPN

Two Stanford University students lost their university computer system privileges last week after they tried to rig a contest on ESPNNet (<http://espn.net.sportszone.com>). According to a story posted at the site, the students, one an electrical engineering major and the other a computer science major, swamped the polling system with votes and locked out others trying to cast ballots in the Battle of the Mascots contest.

New Web software talks the talk

PictureTalk in Pleasanton, Calif., is announcing software that lets users share presentations over the Web. Users download free client software and then, while participating in a conference telephone call, log in to the same

URL. Users can then share and alter presentations or spreadsheets.

White House 'de'-coupled

Efforts to restrict Internet access often backfire. A filter designed to block kids from finding nasty surprises deemed Bill & Hillary and Al & Tipper obscene. The namesake tool from SurfWatch Software in Los Altos, Calif., blocked access to the White House home page because it contained the word "couples."

'Smelly Cat' fools phone security

The Internet mailing list Best of Security last week warned that singing voices can fool telephone tone-detection equipment. It seems a man played Hare Krishna chants into his girlfriend's answering machine and the machine replied, "Enter access code for remote operation." Someone else reported that his answering machine thinks that Lisa Kudrow and Chrissie Hynde singing harmony on "Smelly Cat" sounds like an asterisk, or end-of-message signal. "Maybe the machine just has taste," he suggested.

FBI agents arrested a former IS staffer at Philip Morris and charged him with masterminding an elaborate scheme to defraud eight banks of \$323 million in loans for an alleged "secret" Philip Morris project to develop an alternative to cigarettes. Edward J. Reiners, 51, is believed to have worked with a female accomplice under the fraud scheme known as Project Star, in which Reiners told lending banks the money was to be used to lease computers to develop the cigarette alternative. Reiners left Philip Morris' IS group four years ago. If you want to drop a dime on an IS manager gone bad, call our crime-stoppers hot line at (508) 820-8555. If you don't have a dime, call (800) 343-6474. News editor and part-time detective Patricia Keefe can be reached at (508) 820-8183 or via the Internet at tish_keefe@cw.com.

"THE AMI PRO AND WORMS AINT SELLING SO GOOD, BUT THE QUATRO PRO AND GRUBS ARE MOVIN' LIKE HOTCAKES."

IS ALL TCP/IP ALIKE? CUT IT OUT.

ONNET™ V2.1
FOR WINDOWS
NOW AVAILABLE

COMPARE	OnNet Family	ChameleonNFS v4.6	LAN Workplace 5.0
Single solution that works with Windows® 95, Windows NT®, Windows® 3.1 and Windows™ for Workgroups	YES	NO	NO
Customizable, intelligent install addresses user requirements	YES	NO	NO
Optimizes your network connections with advanced 32-bit TCP/IP VxD kernel	YES	NO	NO
Views, prints, converts documents and graphics without originating applications (KEYview™)	YES	NO	NO
Automatic network connection from the road or office (IP Switching)	YES	NO	NO
High-speed connectivity to anyone, anywhere (ISDN, X.25, CDPD)	YES	Partial	NO
Dynamic network connectivity with automatic router discovery and router fallback	YES	NO	NO
Advanced network troubleshooting tools keep you connected	YES	Partial	YES
Automatic scripting allows easy, one-click access to your most frequent connections	YES	NO	NO
Protects valuable data with Internet firewall support for your PC (SSL, SOCKS, ANS, others)	YES	NO	NO
Increases desktop flexibility by allowing you to run Netware applications over IP	YES	NO	YES
Seamlessly coexists with other enterprise networks (NetBIOS, Vines, IPX/SPX)	YES	NO	YES
Single vendor for host access, resource sharing, transport, Internet client and server with a worldwide sales and support organization	YES	NO	Partial

IN THE OFFICE OR ON THE MOVE,
THE OnNet™ FAMILY PROVIDES THE WORLD'S MOST POWERFUL
YET EASY-TO-USE SUITE OF TCP/IP INTERNETWORKING SOLUTIONS.

Nobody delivers more power, flexibility, or award-winning internetworking applications than FTP Software's OnNet family of products. OnNet's 32-bit NFS client, along with its suite of Windows applications, make it perform seamlessly across any Windows platform. With worldwide ISDN and wireless support, OnNet offers a comprehensive connectivity solution. Plus, OnNet's

advanced level of task automation translates directly into cost savings; you'll spend less time administering your network, or repeating frequently entered commands. Field-proven by over 4 million users, OnNet includes the world's most trusted TCP/IP stack. So, cut this ad out and start shopping. Or save the frustration and call us now.

OnNet & OnNet 32
Comprehensive suite of 16 and 32-bit PC internetworking applications for all Windows platforms, based on the world's most reliable TCP/IP stack

KEYview™
The best Internet utility to view, print and convert files... from anywhere

CALL FOR FREE* EVALUATION SOFTWARE

*For qualified customers. 100 shares available.

InterDrive
Complete NFS client server solutions for all Windows platforms

Intranets are here.

Intranets quicken the pulse of organizations. In a way never felt or seen before. It's alive. It's what happens when people are connected. To the information they need. Whatever it is. To the people they need. Wherever they are. Any time. Twenty-five hours a day. But intranets require new software. The old stuff wasn't made for this new environment.

Introducing Livelink. From Open Text, the company that already provides the search muscle of the Internet. Livelink connects you to the people and information you need, along with tools to take care of business. Industrial strength tools. Document Management. Project-Oriented Collaboration. Full-Text Searching. And Workflow. Livelink. The Intranet Suite. It's alive.

Cyber us at <http://www.opentext.com/livelink>. Or call us at 1.800.507.5777.
